I have problems when people state "current flows". That is not
actually true. Power in the electromagnetic wave that flows down a
transmission line and currents on the center conductor and outer
conductor are dependant on the E and H fields of the wave within the
transmission line at any point on the transmission line.

outside that I think we are primarily in agreement.

So current -doesn't- flow?

> Power in the electromagnetic wave that flows down a
>transmission line and currents on the center conductor and outer
>conductor are dependant on the E and H fields of the wave within the
>transmission line at any point on the transmission line.

Those E and H fields are created by voltage and current introduced
onto the conductors. A transmission line simply establishes a kind of
self-propogating 'symbiosis' between the fields and the current &
voltage on the conductors. Current does indeed flow on those
conductors -- if it didn't they wouldn't be necessary.

>outside that I think we are primarily in agreement.

What you are missing is that different things happen on the outside of
the coax than what happens on the inside. And what Lance was pointing
out (if I may be so bold as to speak for him here) was that currents
on the outside of the coax can screw up things when you try to measure
what's happening on the inside.

Okay maybe I am not expressing my self correctly and right now I don't
realy have the time or patience to look back through my old text
books. It has been several years since I have done a lot of RF work
and some things are not as fresh in my mind. It does seem like the
less you use the more you forget or have trouble explaining what you
think.

Most of my work lately has been away from RF.

I've posted many, many times on this topic and have shown a number of cases where the load is perfectly matched but the power dissipated in the source resistor is less than or greater than the "reverse power", clearly demonstrating that this concept is incorrect. There are several examples at Food for thought.txt available at http://eznec.com/misc/food_for_thought/.

Because I've posted so much on the topic I won't do it all again. But I know at least one person on this newsgroup would be glad to have an opportunity to express his views once again. I'll leave this discussion to those who want to revisit it; I don't. But I do want to caution readers that this view of "reflected power" is demonstrably incorrect.

Convolution is a mathematical stunt you can perform with
two functions: f(x)* g(x) = (integral from 0 to x) f(t)g(x-t) dt.
At least that's how it's explained in Schaum's Outline book
Differential Equations. It's pretty tough to see how it relates
to power in a transmission line. Maybe someone has a use for it
there.

Hello, Kahuna

Yes, some truckers are using 2 meters and 440 MHz (70 cm). Your best bet may be to get into a group for truckers and ask them.

One thing that strikes me is where to mount the antenna. Most truckers are using dual antennas - one on each side (perhaps mounted on the mirrors).

The big boost provided by such an arrangement is not gain - it is getting omnidirectional coverage. Consider if you are using only one antenna and talking to someone behind you a few miles. If you round a curve in a manner that puts the trailer between your antenna and the person you are communication with - uh, better make that the person you *were* communicating with LOL.

This isn't going to work at VHF and above. Two antennas mounted far apart are going to show strange radiation patterns.

I remember back in 1994 when I worked for a 2 way radio service, a construction firm had a lot of dump trucks (as I recall, we did about 60 installs - that is a lot of dump trucks). They were unhappy with the work another firm had done. The repeaters were dropping out on the trucks. The problem was that the other firm placed the antennas on the top of the cab, well below the level of the top of the tiltable bed. This blocked signals from the rear and, depending upon the direction of travel of the truck, could interfere with communications.

The problem was solved by simply moving the antenna to the highest point on the vehicle and leaving sufficient slack in the coax that the truck could tip the bed to dump its' load without damaging the coax. How this could possibly be done with a trailer, I'm not sure at all. Perhaps some truckers could point you in the right direction on this.

Also, bear in mind that cross-country travel will take some planning on which repeaters you wish to use. Different repeaters often attract different sets of users. Try and find repeaters that are popular with truckers. Usually, you'll be able to use one repeater for a total distance of anywhere from perhaps 30 to well over 100 miles, depending upon how close you approach the repeater. Most of the 70 cm repeaters here have a range approaching 60 miles in all directions. The two meter repeaters around here have a similar range.

As to planning, bear in mind that cities are liable to have a *lot* of repeaters. Should you mount an antenna on top of the cab, you'll have to plan accordingly and switch repeaters more often, using repeaters that are ahead (or to the side) of you on your journey. Usually, you should be able to hit them 60 miles away or so.

To give you an idea of the repeaters and where they are located, check out this URL:
http://www.artscipub.com/repeaters/

That should keep your head spinning for a bit LOL. Seriously, if you search by cities on a route you often take, you'll find what repeaters are out there on a band you are thinking of (2 meters/440 - and a lot more, besides).

In a word, baloney. The error is independent of length. A zero length
bridge calibrated at 75 ohm is in error when measuring in a 50 ohm
system. Period.

>The error is even more
>insignificant when there are a host of variables and confounds between
>the SWR meter and the transmitted field that can (and frequently do)
>affect the objective -- field strength.

Often, field strength is of zero importance. What do you do when the
device under test isn't supposed to radiate? The simplest example of
this would be a CATV system, yet VSWR is *extremely* important in
cascaded networks.

>It's much simpler (and just
>plain logical) to measure the field strength directly instead of
>measuring an abstract value halfway towards the objective and relying

More baloney and it isn't even sliced.

The word is "blarney". And although the syntax of my statement was
somewhat 'convoluted', the logic is sound -- you can dyno your engine
all day, but the only way to know for sure how fast you can get down
the quarter mile is to run the race.

Strangely enough, the results are not phaseless. The equation
for reflected power at an impedance discontinuity is:

Pref = P3 + P4 - SQRT(P3*P4)cos(theta)

Where theta is the phase angle between V3 and V4, the
associated reflected interferring voltages.

Reference "Optics", by Hecht, Chapter 9 - Interference

The last term in the equation above is known as the "interference"
term. Unless you take the interference term into account, you
don't have a ghost of a chance of ascertaining where the power
goes.

Tom Donaly wrote:
> Cecil was talking about current, not power. You can't add
> power the way you can voltage and current.

That's absolutely correct. When one adds powers, one must
include the interference term which takes care of conservation
of energy. The equation is:

Ptot = P1 + P2 + SQRT(P1*P2)cos(theta)

where theta is the phase angle between V1 (associated with
P1) and V2 (associated with P2). The last term is labeled
the "interference term" and is absolutely necessary when
adding powers. If the interference term is positive, the
interference is constructive. If the interference term is
negative, the interference is destructive.

The best reference on interference and the adding of powers
that I have found is Chapter 9 in "Optics", by Hecht.

But I specifically stated above the Z0 environment was different
from 50 ohms. The same type of error happens when one uses a
50 ohm SWR meter in a 75 ohm coaxial line.

If power (ExH) is reflected then, of course current is reflected.
Powers can be added but you *must* include the interference term.

This is true for a source equipped with a circulator and load but
most ham transmitters are not equipped with a circulator and load.
You must take the phase of the voltages or currents into account
in order to calculate the interference power term. Only then will
you be able to tell where the power goes.

So is your concept of "sloshing" energy. Reflected energy
waves are demonstrably real. One can find out exactly where
the reflected power goes by taking the interference power
terms into account. Optics engineers figured it out a long
time ago.

A 75 ohm bridge is expecting the ratio of voltage to current
to be 75 for a matched system. In a 50 ohm matched system, the
ratio of voltage to current will be 50. Therefore, the 75 ohm
bridge won't be balanced. A 50 ohm bridge would be balanced.

So if I have a perfect voltage source in series with a 50 ohm resistor, and I set the voltage source for 100Vrms (50W to the load, 50W to the source resistor) and I leave the output terminals open (100% reflected power) then the resistor will dissipate 100W? With no current flowing through it?

Wow. I gotta review my basic electronics.

Depends on what you mean by error. Is it a linear system? If the near field strength increases with no change in the radiating structure itself (and propagation is stable, etc.), does the far field not increase by the same ratio? But of course, with a repositionable (rotatable) directional antenna, it's pretty hard to calibrate the FSM in a meaningful way since the antenna system changes (quite a lot, with respect to the FSM) as you rotate it, so you don't know from one time to the next that you have the RIGHT field strength. I'd (ideally) like to know that the transmitter is properly adjusted to output a clean signal, and that the antenna system presents the proper load to the transmitter, AND that the antenna system is radiating like I'd like it to. The "SWR meter" is one component that helps me, but with only one of those tasks. (And yes, it's fine with me if you care also about the SWR on your 450 ohm balanced line...there may also be good reason for wanting to know that.)

Cheers,
Tom

PS--Frank, if you look back in the archives from this group, you'll find directional couplers (of the sort that measure the line at a single point) explained in great detail with four-part harmony and the whole nine yards. Go study them and you may understand why calibration is important.

Roy Lewallen wrote:
> There are several
> examples at Food for thought.txt available at
> http://eznec.com/misc/food_for_thought/.

Regarding errors in the first food_for_thought:

A 100w source equipped with a circulator and load while
looking into an open line, will generate 100w and dissipate
100w in the circulator load. That 100w is definitely not free
power. It can be demonstrated to have made a round trip to
the open end of the feedline and then back to the circulator
load.

The error in your thinking is that the source would see an open
circuit when it is equipped with a circulator and load. It won't.
It will *always* see the Z0 of the feedline as its load (assuming
the circulator load equals Z0). That's the purpose of using
the circulator and load - to allow the source to see a fixed
load equal to Z0.

If that were true then the mere existence of standing waves could
render any measurements worthless. Regardless, I did the experiment a
long time ago -- take a 50 ohm SWR meter and plug it into a 75 ohm
line -- it gives you almost the same measurement (in fact, I didn't
see -any- difference at all). Any small error you might see is, as I
said before, insignificant, especially considering the reason you are
measuring SWR in the first place. The objective is simply to get the
reading as low as practially possible. If you feel the need to quibble
about a couple tenths of a point on a ratio then maybe you're spending
a little too much time playing with the calculator instead of the
antenna.

The bridge is calibrated to the impedance of the directional coupler
(which is usually built to match the expected line impedance, but
cannot be "zero length" in the present state of reality). If the
impedance of the signal is different than what is expected by the
bridge then your power measurements will probably be wrong (to what
extent they are wrong may or may not be important). But if that's the
case then any error will be the same by percentage and sign for both
forward =AND= reflected power because the impedance of the signal is
the same for both forward and reflected power. IOW, the ratio is the
same -despite- the impedance.

If you don't believe me, try it yourself.

I'm not quite sure what you are trying to say Frank.

The direction coupler samples voltage across and current through a given point. There is always a current transformer of some type and a voltage sample through some type of divider. The "voltages" representing E and I are summed before detection (conversion to dc).

The "directivity" comes because the current phase sample is reversed 180 degrees from the summing phase, causing voltages to subtract.

This means the directional coupler is calibrated for a certain ratio of voltage and current, so when they exist you have twice the voltage in the direction where E and I add, and zero voltage where they subtract.

If the

?What does that mean?

If the directional coupler is calibrated at 50 ohms and you use it in a 75 ohm system you won't get a total reflected null even if the 75 ohm line has a 1:1 SWR. But if you subtract reflected power from forward power readings you will get the correct power, within linearity and calibration limits of the "meter system". This has nothing to do with standing waves. It has only to do with the relationship between current and voltage at the point where the directional coupler is inserted.

I'm not sure if you are saying that or not.

Please run it again in the following configuration:

Xmtr--1/4WL 75 ohm line--SWR meter--1/4WL 75 ohm line--50 ohm load

The SWR meter will read 2.25:1 when the actual SWR is 1.5:1

Xmtr--1/2WL 75 ohm line--SWR meter--1/2WL 75 ohm line--50 ohm load

The SWR meter will read 1:1 when the actual SWR is 1.5:1

A 50% error in SWR reading is NOT insignificant.

A 50% error in SWR is NOT a couple tenths of a point.

The error is NOT the same percentage. In a matched 50 ohm system,
the 75 ohm bridge reflected power reading will be off by an
infinite percentage, i.e. division by zero.

> If you don't believe me, try it yourself.

I have tried it and you are wrong. Maybe you should try it.

Much noise has been radiated. I speculate that a reminder about what linearity means might get things back on track. In a linear network (lumped or distributed) superposition (of linear signals) produces correct results.

The last statement works in both directions. (The degree to which a network is linear is the same as the degree to which superposition is valid.) (If one supplies a large enough signal to any network, it will become non-linear - as in letting-out-the-smoke-put-in-at-the-factory.)

The catch in all of the above is that superposition only applies to linear signals and power (however indicated) is not a linear signal. Power, which could be complex power S = V*I* (the phasor voltage time the conjugate of the phasor current) or the magnitude of S (apparent power) or the real part of S ("real" power), simply does not obey superposition even in a network that is linear.

Bottom line: assuming the use of networks (lumped or distributed) that are essentially linear, one is only allowed to combine phasor voltages or phasor currents (but not their product nor the square of such linear signals). Once combined, the resultant voltage and the resultant current may be used to find a measure of power. (The "combined" mentioned must be a linear, additive process.)

It seems to me that Roy, and others, have plowed this ground many times.

Hello CRR360:

The problem maybe with the antenna and coax.

Check to see if the coax is wired correctly. Cenetr to center wire, and outer to outer continuity with a meter. Also make sure the center does not have continuity to the outer part of the coax connectors.

The antenna your using is also know for NOT being a good performer.

Let us know how the coax checkes out.

Jay in the Mojave

Power can certainly be combined, just not superposed. Here is
the irradiance equation from _Optics_, by Hecht.

Itot = I1 + I2 + Sqrt(I1*I2)cos(theta)

Irradiance is power/unit-area. The last term is known as the
"interference" term. Hecht provides separate chapters for
interference and superposition, the best treatment of those
two subjects of which I am aware.

Here is the transmission line forward power equation from Dr.
Best's QST transmission line article.

Ptot = P1 + P2 + Sqrt(P1*P2)cos(theta)

It is virtually identical to the irradiance equation above.
The last term is known to be the "interference" term and
for a Z0-matched system, THETA EQUALS ZERO, so for a Z0-
matched system, a complete analysis can be done using only
the forward and reflected power magnitudes. This is something
I and others have been saying for years and it has been
called "gobbledegook" (sic) by Roy (and worse by others) even
though Roy admits that he doesn't care to understand where the
power goes.

> It seems to me that Roy, and others, have plowed this ground many times.

Yes, and they are still not 100% correct. Roy has said:
'I personally don't have a compulsion to understand where
this power "goes".' Too bad he doesn't have that compulsion
because, with a small amount of mental effort, he surely would
have figured it out before me - if by no other means, simply by
referencing the chapter on EM wave interference in _Optics_.

Frank wrote, "Prove it."

OK, here I am at the track (the bench). I have an SWR meter that I've verified with my HP8653 to behave like a short section of 50 ohm line at the frequency of interest. I put a load on its output that I've also verified to be 50 ohms at the frequency of interest. I've applied power to the load through the SWR meter. The indicated SWR is 1.23:1.

I took the SWR meter apart, and located a particular resistor. I changed its value slightly. I re-verified that the meter still looks like a short section of 50 ohm line. I re-ran the experiment of applying power through the meter to the load. The indicated SWR is now 1.05:1.

Yes, I really have done that!

This particular meter is built, as very many of them are, to sample current and voltage at a point of essentially zero length on the line. The current sample (through a current transformer: line center passes through a toroid; secondary is several turns, loaded by that calibration resistor) is converted to a voltage by dropping it through a resistance, and by changing that resistance, I can change the relative amount the current contributes to the measurement. In other words, if the voltage sample is v(samp)=k*v(line), I want to adjust the current sampling so v(i(samp)) = k*Zo*i(line), where Zo is the impedance to which the meter is calibrated to measure SWR. In some meters, there is a means to adjust the voltage sampling ratio easily with a variable trimmer capacitor. Either way works. The adjustment DOES have a TINY effect on the impedance the meter presents to the line it's in, but that is very minor, compared with the range of adjustment of the impedance calibration value.

Yes, I really have adjusted a meter which uses the variable capacitor, too.

Cheers,
Tom

In the old Heathkit SWR meter were instructions to
install either two 50 ohm resistors for a 50 ohm SWR
meter or two 75 ohm resistors for a 75 ohm SWR meter.
We used a lot of RG-11 back in those days.

>Tom Donaly, KA6RUH
****

Yes Tom

Convultion was the wrong term to use. I made a mistake because i type
as i think and on occasion hit send before i reread what i have
written.

I still contend that a sinusoidal wave travelling down a coax is
comprised of perpendicular(orthogonal) E and H fields. The these
vector fields that induce sinusodial current and voltage potential
vectors in and between the shield and center conductors as the wave
travels. Both the source and reflected waves are comprised of two
vector fields, E and H. Granted this is true only when the load
reflection coefficient is not zero. In that case of zero, then there
is no reflected power.

It is possible to derive from the vector current and vector voltage a
magnitude of those vectors and thus a produce two scalar quantities
that can be pluged into Ohm's Law and derive an instantaineous power
at a given time and position on the coax. That both source and
reflected sinusoidal current and voltage can have derived scalar
values. These values can be directly added.

This all started from an SWR question. I contend that the
instantaineous power at any given time and position of the coax can be
expressed as the sum of the magnitudes or scalar quantities of the
source and reflected powers. If you are wanting just the magnitudes of
the power, then this should work.

james

> Itot = 300W

Sorry, I made a mistake in the equation. Please forgive
my omission. Here's the correct equation:

Itot = I1 + I2 + 2*Sqrt(I1*I2)cos(theta)

So if theta equals zero, Itot would be 400w, not 300w.

This is the power of superposition of coherent waves. When
you superpose two 100w coherent laser beams, the resultant
power is indeed 400w and must be supplied by the sources
or supplied by destructive interference from somewhere else.
This is all explained in _Optics_, by Hecht. Hows about
reading it so I won't have to explain superposition to you?

There sure seems to be a lot of ground plane on the PCB.

Outside that it looks almost like a deadbug assembly.

If the transistors are good,it might be good for parts.

Just for clarification sake

SOmeone with the HCB-10C walks 200 to 300 feet down the road and you
transmit and he can not hear you?

If that is so canyou hear anything else?

It may sound as if you have a defective antenna. Or you have a
defective coax. As someone else suggested. disconnect the coax at the
radio and at the antenna. with an Ohm meter check continuity of the
shield and center conductor from one end to the other. Also check for
shorts between the center conductor and outer conductor. This needs to
be done with the coax disconnected from the antenna.

Report back what you have found and then we can go from there.

james

Note the
following extremely important qualification. The extra power
must come from somewhere, either from the two sources or from
destructive interference. So says Hecht.

When you phasor add 100v to 100v, what V^2/Z0 do you get?

>>and must be supplied by the sources or or supplied by
>>destructive interference from somewhere else.
>
> [Hecht rolling his eyes] So, this means that Hecht's formula only
> works for steady state? :-)

Yep, irradiance is a quantity averaged over time. It is
steady-state by definition, an accumulated effect.

> If both are 100W pulses, and the lasers are off before the target are
> pulse illuminated -um-
> 1.) 100W
> 2.) 200W
> 3.) 400W

You will get interference rings of 400w/unit-area and
rings of 0w/unit-area all averaging out to 200w total.
All this is covered in _Optics_. Please spare us your
ignorance and read the book.

If the sources are incapable of supplying the extra power,
For every P1+P2+2*SQRT(P1*P2), i.e. constructive interference,
there is a P1+P2-2*SQRT(P1*P2), i.e. destructive interference.

james,
to be clear: HCB-10C walks out perfoming a mike check w/ the Midland mobile responding.
1. past 200 feet, you can't hear a transmission from the HCB-10C to the Midland mobile.
2. past 300 feet, you can't hear a transmission from the Midlan mobile.

BTW, I checked the continuity of the Coaxil per your recommendation - no short, and the continuity lighted up fine on both the center post and the shield. I did learn a lesson: next time I'll check it FIRST before stringing it through my ceiling, attic and roof.

Using Topofusion application, I also checked the Line Of Sight from my house to where we walked the HCB-10C and it's a mere slight incline; no obstructions other than some trees.

Thanks for the help.

>The SWR meter will read 1:1 when the actual SWR is 1.5:1

I'm not going to argue this -- either you can play with theory and
speculate about the results, or you can do the experiment yourself,
observe the empirical evidence, and -then- use theory to explain the
results. When you get around to doing the latter give me a holler in
rrcb since I'm done cross posting on this topic.

And BTW, the best location for the directional coupler is at the
feedpoint of the antenna. Barring that, the next best place is at the
transmitter. Regardless of it's location, you should -never- leave the
coupler floating with the coax or you will end up with results like
what you describe above.

No, wait.. someone said that's illegal so I guess I won't bother with
it. Got enough problems, I don't need to be loading more on for no good
reason, eh?

John

just make sure the coax can handle the power and freq your linear puts
out

rg8 can handle a kilowatt over that larger cable quickly becomes
necessary

even if you start out with a small kilowatt linear there will be a
time in the future when you want to run more power, so you might want
to start off with better cable right off

running a hundred watts is not that noticeable

especially if you are mobile

i run 1500 watts in my mobile and 250 watts on my base and have for
decades

on rare occasions I kick in my big 2500 watt linear on the base but
better to keep low key

running 100 watts on the base is no big deal

above 400-600 watts in the mobile the alternator becomes a problem,
you will have to either add a second alternator or get a
super-industrial one

your chances of winning the lottery are greater than being bothered by
the "radio police" as long as you are NOT annoying and a trouble
causer

Faraday used the cages after the monkeys were through with them. The monkeys
left them so fouled up that EM waves couldn't penetrate the walls.

I fed my in dash sony 18 volts and it never sounded so good for about 20
seconds or so, before I realized my voltage regulator had quit. My first
clue was how bright the gauge lights got before they started burning out.

Luckily I was only about 5 miles from home so I made it before I fried the
wiring harness and such.

Over-volt for fun! :)

I'm running RG-6 out to my 2 meter antenna. I put my cheap RS HF meter inline to see what I'd read. I got my expected 1.5:1. Wattage read 1/2 of what the radio is rated for. It gets out and I'm not worried about it.

CALL STEVE
(Debbie Harry/Blondie/Purple Haze)

Cold nuts this winter, baby,
Call Steve to keep them warm
Need a blowjob this winter, darling,
Steve'll go down wherever you are
Steve'll use all his charm,
He likes to drink his cum lukewarm

Call Steve, Call Steve
For that wet blowjob
Call Steve any, anytime
Call Steve, Call Steve
For a wet blow job
You can call Steve any day or night
Call Steve

Steve covers dicks with kisses, baby,
Steve covers testicles with love,
Hairy, sweaty, or sal-ty, maybe
Steve can never get enough,
Faggots call Steve, he don't know why,
Breathless Steve never runs out of k-Y

Call Steve, Call Steve
For that wet blowjob
Call Steve any, anytime
Call Steve, Call Steve
For a wet blowjob
You can call Steve any day or night
Call Steve
Steve sucks on anything,
When you're ready, Steve can swallow your jing
Call Steve

[Break]

Oooooh oooohh Niggerdicks are Steve's only love,
Oooooh oooohh Niggerdicks, Steve can't get enough,
Oooooh oooohh Steve, moi cherie, au revioir
Anytime, anyplace, anywhere, anyway....
Steve'll suck anytime, anyplace, anyday---ay

[Break]

Call Steve, Call Steve
Sucking niggerdicks is his life
Call Steve, call him any, anytime
Call Steve, Call Steve
Call Steve for blowjobs some other time
Call Steve, Call Steve
Sucking niggerdicks is his life
Call Steve for his sweet desire
Call Steve, Call Steve
Call Steve for his lovin' of your dick big-time
Call Steve, Call Steve
Sucking niggerdicks is his life
Call Steve any, anytime
Call Steve, uh-hummm,
Call Steve
(fade out)

:)Better update that meter.I have a c.b'r in my town and he has a d&a phantom that swings
2300 watts on his meter.lol
>

I have a CBer in my town that claims his Heathkit SB-220 does 3000
watts, another with a Palomar 300a that claims his does 700 watts, and
another with a "three pill" DaveMade that supposedly does 700 watts.
About all I know for sure about the DaveMade is the owner has to put
it in the repair shop about once a month, and it only takes about 100
real watts to step on him.

Hello CCR360:

There are the fiberglass antennas that are the simplest to install. No foot print that will snag the airlines overhead, or scare small children.

But I always thought that having a significant sky hook antenna that aircraft purposely avoided, and small children where scared of, was always desirable. Right?

I don't think I am missing anything here!

China seems to be profitting nicely at the USA's expense. My guess is that they are not going to endanger losing that by invading Taiwan. China has a weird progressive sort of Communist Gov't, that is now allowing capitalism. Seems to be working fine for them. But I don't think they are a military threat because of it.

Before that, it appears 6 of the former Iranian hostages claim the new president in Iran was one of the hostage takers. That mother has something coming. Bush is supposed to be this gun slinging cowboy, or at least he won re-election because of that or the fact that he bluff this country into thinking Iraq was involved on 9-11. I'd like to see the balls he has now, with one of the most humiliating events in American history, showing it's ugly head again. My bet he does nothing.

A marine VHF radio is not a CB.

Is it hooked to a working antenna?

Dude, you have MAJOR issues that YOU need to take elsewhere!

This is rec.radio.cb

Go Away!

We can't talk to you!

You better pray to GOD that you don't get a visit to where ever the hell you live!

We're tired of your explosive outbursts towards others.

You must not be getting much education or you're being educated beyond your intelligence at PSU!

Let's see what you're email address really says about you.

Validation results
confidence rating: 0 - Bad address
error : Domain does not exist
canonical address: mjc5@enoughalready.psu.edu

Hiding behind a fictional address so that you can gay-bash all you want!

Validation results
confidence rating: 3 - SMTP
The email address passed this level of validation
without an error. However, it is not guaranteed to be
a good address. more info

any carbon dummy load has a much lower swr over a much wider
bandwidth... that says nothing about performance. I suspect a
penetrator would do a much better job... fancy coils really get the
antenna illiterate though...

Why not put all the advertising inside ONE posting? It would be a lot more considerate. Some people consider your sale notices as spam, why not reduce the total number of intrusions?. The crossposting of commercial advertising is in bad form too.

mike

1258. Cool Yahoo! radio group "ownership" up for grabs!

Newsgroup: rec.radio.cb
Date: 2005-07-02 15:54:00 UTC
From: Sparky Voltz <sparky_unit_412@yahooEY.com>
Message-ID: <h2edc1djuhrm8ifi3il20j1pjcs1uhmig0@4ax.com>
Source record: 202145

Greetings,

I may have posted an invitation of sorts to this group advertising the Yahoo! group "All-Band Radio Renegades and Outlaws". I have chosen to relinquish ownership of that group. The following message was posted to the group, and appears here, since many of those who joined did so from reading my original USENET post.

Below is my original message. I should have done two things differently; one, I am going to send this version as a "Special Notice", since it is of a significant nature in regards to our group, and some of our members have selected to receive special notices only. Also, I should mention that I will NEVER cease my 11 meter and/or CB operation. Too bad if that ticks anyone off, I couldn't care less. As a kid, that pair of walkie talkies I got for Christmas left permanent impressions in my brain which will remain there until it ceases functioning. :) Like all those heterodynes, those southern accents and "handles", the fun of reaching "all the way" to my best friend's house 2 blocks away. I love CB, always have and always will. And, as I stated below, I love my CW. So there ya go.

And, if anyone loses sleep over the fact that I prefer to remain anonymous by using the handle "Sparky", that's your problem. The Internet is full of kooks, nuts, fruitcakes, hackers, stalkers, and other Neanderthals who take immense delight in seeking one's location and identity only to harass, annoy, and/or otherwise make a complete nuisance of themselves. Should anyone care to use their real name, their ham callsign, give their mailing address and telephone number over the Internet, that's your business. Personally, I think it is terribly foolish and highly dangerous. But that's just my opinion. Deal with it.

I am ceasing transmissions on our group's 3, 6, and 13 MHz frequencies immediately. However, 13.555 MHz is allocated by the FCC as a Part 15 frequency and can be used without a license. Part 15 has fairly strict rules regarding power output and antenna limitations. I understand that frequency can be used by any mode of communication. So... I may set up a LEGAL part 15 station of some sort, either CW or SSB, if they are permitted, and attempt operation at some date and time, probably when band conditions are better. Like in 5 or 6 years. :) Otherwise, I shall remain a listener-only, as stated below.

Original message follows:

This group has grown beyond my wildest imagination. I really never expected more than a dozen or so members. However, it seems to be constantly growing, which proves to me that there is interest in this sort of radio operation and activity.

Believe it or not, I have come to the conclusion that I am no longer going to operate on the three HF frequencies we've chosen for our group. The main reason for my change of heart is that I've realized that operating on those frequencies could possibly interfere with our U.S. Military communications. In these seriously dangerous times I simply cannot -- and will not -- put our military personnel in any type of danger or risk. Therefore, I will no longer be transmitting on those frequencies. Secondly, I worked darned hard for my Amateur Radio license, and should I receive the deserved consequences for such illegal radio transmissions, I would most likely lose my Amateur Radio privileges. Frankly, it just ain't worth it. I love my CW way too much. :)

Therefore, I am resigning as "owner" of this group and handing over the reigns to someone else. I am, and will always be, a Shortwave listener who is interested in LISTENING TO the unusual, including pirate broadcasters, "freeband" 2-way radio operations throughout the HF spectrum, and other unordinary and clandestine types of radio operations. I intend on remaining a member of this group, sometimes participating by writing posts and making comments, etc. However, I will no longer promote or endorse illegal radio activity on my own behalf.

If anyone is interested in becoming the "owner" of this group, please email me. I suppose the most fair way of determining who I assign that title will be based on the date the person joined. Sort of a "first come, first served" concept. And should there be a tie, well... I'll toss a coin. One person can be "owner" and the other can be assigned "moderator" status by the new "owner", if that person so desires.

Should I not hear from anyone by Friday July 8, I will simply close the group down for good. It's been fun, friends, and I've enjoyed the banter that's been going on here. I hate to see it end. So, it's up to y'all.

I'll await your request to become the proud, new owner of ABRRAO's. Thank each and every one of you for your joining up, your participation, and your opinions. I do look forward to the continuation of the group.

It's been real...

73 -- ~Sparky~

Often imitated -- NEVER duplicated!

Sparky - AM/FM/SSB/CW from somewhere in the Midwest U.S.A.:

KALL-2671 - CB Radio;
Unit 412/RF412/CO3026 - Freeband 26-28MHz;
W9*** - Amateur Radio;
WQRM313 - GMRS;
M/V Mysterious Traveller - Marine;
plus FRS, MURS...

...got frequencies? ;)

No one needs hide their sexuality it realiy should not be an issue but
some folks choose to make it one

You need help with your clear issues of mental health if you an't
handle the thought that someone might be gay or that someone might
think bigorts like you ought to called on it

1265. How to fix distorted sideband audio on a Palomar 300 Elite

Newsgroup: rec.radio.cb
Date: 2005-07-02 17:33:21 UTC
From: PooOnYou994949@msn.com
Message-ID: <42c6c5e5.11260581@news.verizon.net>
Source record: 202152

==========
Disclaimer:
This post is for educational purposes only, and no guarantees are
offered. Proceed at your own risk.
==========

Some of you may have purchased the Palomar Elite 300 amp currently
being sold on Ebay and various other places. If you have not bought
one yet...don't! The amp has several major design flaws. If you do
have the misfortune of owning one of these then the following post may
be of interest.

How to fix two design flaws in the Palomar Elite 300 amp.

Design flaw # 1.

The Palomar Elite 300 amp is a class C amplifier. In a nutshell that
means your transmit audio on sideband will become distorted as soon as
you turn the amp on. No amount of mic adjusting, SWR tuning, cable
swapping, or anything else will fix it. The problem is in the amp
itself. To fix the problem you or a qualified technician will need to
bias the amp for class B or AB1 service. The instructions below will
show you how to fix your amp. All you need is basic soldering skills,
and a minor understanding of electronic parts.

Here is the bias fix.

You may need to remove the Palomar Elite 300 from the housing to do
this mod. I took off the front face plate, removed the four allen
screws holding the heat sink to the two final output transistors,
removed the screws holding the two female coax connectors from the
back of the plate, and then took the little plastic holder from around
the main DC wires. The unit slides out of the front at that point.

1) Look at the top of the circuit board from the front of the amp.

2) To the left of the smaller input broadband transformer there is a
ferrite bead.

3) Unsolder the farther leg of the ferrite bead which is closest to
the back panel. Leave the other leg where it is. If you look at the
back of the circuit board the leg you want to unsolder is the leg that
goes to ground.

4) Solder a silicon diode with the cathode (the line) facing away from the ferrite bead to the leg of the ferrite bead you previously unsoldered. I used a Radio Shack 1000 PIV 2.5 amp silicon diode - catalog # 276-1114.

5) Solder the cathode side of the diode (the white line) facing down in the little hole the one leg of the ferrite bead was soldered in.

See the picture at;

http://www.shadowstorm.com/cb/Palomar-Elite-300/Bias-fix-2.jpg

6) Get a 100uh RF choke from Radio Shack (Catalog #: 273-102).

7) Solder one end of the RF choke to the solder covered side of the larger output broadband transformer.

See the picture at;

http://www.shadowstorm.com/cb/Palomar-Elite-300/Bias-fix-1.jpg

8) Solder a 100 ohm 1 watt resistor to the other end of the RF choke. I used a Radio Shack metal oxide resistor - Radio Shack catalog # 271-152.

9) Solder the other end of the 100 ohm resistor to the junction where the ferrite bead and the diode you previously soldered meet. If the resistor gets too hot during transmit Radio Shack carries a 10 watt 100 ohm resistor, but it is kind of big.

10) Make sure none of the exposed wire from the parts you added touches the bottom, top or sides of the metal case.

11) Re-assemble the Palomar Elite 300.

10) You're done!

Your sideband tranmit audio with the Palomar Elite 300 should now be clear.

Design flaw # 2.

On another issue, the Palomar Elite 300 does not filter RF from the B+ line, so the DC power leads act like an antenna just like the regular antenna. The RF running up the DC power chord kept tripping out my power supply until I wrapped the DC power chord around a large ferrit core just outside of the amp chassis. (Radio Shack 273-104) .

There are other design flaws as well (like a nasty impedance mismatch for both broadband transformers), but these are the only two I have attempted to fix so far.

So grow up, if you are so bigoted that a mere word can make you ill
seek help

You also BTW reval you ignorance nut that is a another matter

That many people may be as sick as you are is not excuse

>

Then go puke if you must but you go from Mere gay bashing to dictating
religous morals as well.

If you can't deal with the certainly that some peope are gay or
bisexual, and you choose to pormote censorship then you are the one
screwed up

Maybe I could put the Rod of God on my tower with a rotor and talk on
the super
bowl. Will the rod of god work without a ground like the suburban?

Food for thought

Triple 5
Trip 555
BIG in TEXAS

you think we should accept gays, child molesters think we should
accept them, i think serial killers would probably give me some sort
of reason why i should accept them

the answer to all this crap is NO

take your butt where they do accept you or be prepared to have it
kicked out of the way and not because you are gay but because you
expect to enforce your will on others and that will not be tolerated
and is something you do get your A$$ kicked for

my mistake, i thought we had began talking mobile antennas

a 5/8 length of copper pipe or thin wall steel conduit fed thought an
l-match at the antenna base needs no ground planes and will walk the
dog with the best of them

best part is that it is cheap and most have the parts laying around
they can build it from

your lumping of Gay with child molestor and serial killer is proof that
you are in fact homophobic

no your are trying to force your will on others to exclude a large part
of the Ham and CB radio world because you don't like em.

grow up little boy

gays must like thinking everyone is homophobic with some 'fear' of gays, we don't fear you, we pity you, you do not frighten us, you sicken us, we share a compassion for you we hold for the mentally infirm and ill

if it makes you feel better to use other pretend words to describe what is really going on in our minds, fine, we don't give a damn, it doesn't agitate us, it gives us a clear picture of the strange workings of your mind and the denial you are locked in

now go crawl off into a dark corner and get out of our sight pretend whatever pleases you, speak in whatever 'pretty' words you want to describe your disgusting behavior in, your depraved-queer-homosexual activity is simply a disgusting annoyance, like a bum urinating in a gutter, or puking on a sidewalk, these make me ill too

I am not seeking your education just seeking better understanding of
your position.

But yes I think this has gone well to far.

Gee I have never said or even suggested you don't have the right to
offended etc, just that you have no right right to impose your beliefes
on others, Nor have I mention or discussed much of anything concerning
homosexual acts, that realy doesn't belong here. You are simply
obsessed with what other people MIGHT be doing

Reflecting on some of your other thoughts

sure Child molester and serial killers if currently free in society
have the right to post here if they wish, an dif they want to talk
about radio then they should be welcome

But nobody has to "get out of sight" just because YOU say so

Grow up little boy

1276. Re: Gay hams

Newsgroup: rec.radio.cb
Date: 2005-07-02 20:09:38 UTC
From: theposter <mailguy2004@yahoo.com>
Message-ID: <p2o3221vx3v0gvy.020720051309@kirk>
Source record: 202163

you have drug out all of the balderdash and cheap shot methods the gay community deploys

you seek to make utterly depraved activity an acceptable norm

goodluck

one more time, you offended me as much with your gay practices and discussions of them as if you were to publicly masturbate on the street, you think it your right, how you can argue that you have the right to offend everyone else and then stop some person from defecating in the street before us looks like insanity to me, i would accept that before i accept my world be soiled with homosexual public displays, at least the act of defecation is normal

gay used to be a happy word when I was a child, now I disdain letting it cross my lips, you degrade, defile and soil everything you touch with your attempts to bring perversion into normal acceptance, go home you disgusting beast, or at least have the decency not to spoil the world with your filth in public

No I haven't the BGL world has far more of them them little

>
> you seek to make utterly depraved activity an acceptable norm

nope I don't realy you may certainly think as you please

>
> goodluck

Thank you
>
> one more time, you offended me as much with your gay practices and

Then BE offended

> discussions of them as if you were to publicly masturbate on the

But I have not discussed any gay practice on this NG or any of the
other radiogroups, only homophobic bashers go on about it, and I lack
the power to stop them. Indeed no Gay ham I know of has described any
homosexual act, on this or any other Rdaio realted group. only bashers
do that

> street, you think it your right, how you can argue that you have the
> right to offend everyone else and then stop some person from

As I do have the right, so do you for that matter

> defecating in the street before us looks like insanity to me, i would

Well I would never try to someone from defacating in front of anyone

> accept that before i accept my world be soiled with homosexual public
> displays, at least the act of defecation is normal

as is the various acts of homosexual, acording to science

>
> gay used to be a happy word when I was a child, now I disdain letting

Seek Help for your Phonophobia

> it cross my lips, you degrade, defile and soil everything you touch
> with your attempts to bring perversion into normal acceptance, go home

> you disgusting beast, or at least have the decency not to spoil the
> world with your filth in public

You dregarde and defile and soil everyhting you touch with your hate,
and bigotry

1278. Re: Gay hams

Newsgroup: rec.radio.cb
Date: 2005-07-02 20:59:53 UTC
From: theposter <mailguy2004@yahoo.com>
Message-ID: <bk7c7ea1p74grv8.020720051400@kirk>
Source record: 202165

unless you lack the intellectual power, you get the intent and jest of my words, gay, sick, depraved activity is not acceptable, even speaking of it in terms which do not convey the sick and depraved nature of it is a crime against humanity

nambla, catholic priests, politicians, teachers, anyone who engages in such activity should not be allowed around children or be in responsible positions where they stand the danger of being respected or stand the possibility of influencing children or those easily taken advantage of

i think real men have sat by out of compassion, confusion and a want to make things better-they have sat in silence-i will not any longer-real men have been tolerant out of kindness, not out of acceptance

end of conversation

Not Acceptable to a hate filled yes I get it what makes you think I
don'r

> speaking of it in terms which do not convey the sick and depraved
> nature of it is a crime against humanity

Crimes against humanity are well defined by International Treaty, and
nothing in thier covers/calls homosexualay as a crime against humanity

You bigrotry and calling for the segragation of people is more likely a
crime against humanity

>
> nambla, catholic priests, politicians, teachers, anyone who engages in
> such activity should not be allowed around children or be in

What activity? Conestual Homosexaul contact? or are you saying as you
seem to imply that merely being Bi or Gay means they are child rapers?
if so more hate

> responsible positions where they stand the danger of being respected
> or stand the possibility of influencing children or those easily taken
> advantage of

Influenecning them how, Not to hate people who are different, something
you clearly do

>
> i think real men have sat by out of compassion, confusion and a want
> to make things better-they have sat in silence-i will not any
> longer-real men have been tolerant out of kindness, not out of
> acceptance

If they are toleranant that is fine, But wether or not someone is gay
or bi has nothing to do with there rights to be Hams or CBers, or be
the Usenet

You have the right to be offended, and if you need to then go ahead and
puke

i will never doubt you will fail to stick your gay A$$ in the face of
decency, or champion the activity and nature of misfits

myself, my family, my friends, my neighbors will be there to meet you,
and quickly point out an area which would be more to your liking, and
more suitable to your comfort, yawn

One I am not gay I am bisexual

two why are you so obsessed with ass and afraid to even type the word

> decency, or champion the activity and nature of misfits

You are the afornt to decency and to freedom for that matter
>
> myself, my family, my friends, my neighbors will be there to meet you,

1282. Re: Gay hams

Newsgroup: rec.radio.cb
Date: 2005-07-02 21:58:59 UTC
From: theposter <mailguy2004@yahoo.com>
Message-ID: <352w4f205a5a2e4.020720051459@kirk>
Source record: 202169

u r gay or you are heterosexual

but damn gays pretending to be bisexual are twice as disgusting, i'll
give you that point, but leads to confusion, all the time you are
wondering whether you should beat them away from your sons or your
daughters

Heard on CB's across America...

"Audio! Audio! Helllo! Hello! Whistle!!!! Whislte!!!!!! Beep!"

Proof that idiots think alike.

1284. Re: Gay hams

Newsgroup: rec.radio.cb

theposter wrote:
> u r gay or you are heterosexual

Nope, Kinseys showed different likely before you were born, you just
don't know what you are talking about

>
> but damn gays pretending to be bisexual are twice as disgusting, i'll

Perhaps bisexauls are twice as disgusting to you. That is your right,

BTW None of my GFs think I was/am gay

> give you that point, but leads to confusion, all the time you are
> wondering whether you should beat them away from your sons or your
> daughters

Your continued impliacation that Gay or Bis are all child rapists is
another sign of your homophobia. It is also libelous, so if you own
anythign worth anything id watch that sort of speech.

and beating them away from anyone IS assult which is a crime, beating
someone becuase you think they are gay or bisexual is in most places a
HATE crime and subject to specail penalities under law

this whole conversation has been a dance with you attempting to
manipulate yourself into being a victim

you are just a poor pathetic queer who should be given mental health
care out of compassion

since the economy is on it's butt and broke there is not enough money
so we ignore the problem

you are a depraved sicko no one wants around their children, family or
placed as a burden on their friends or finds acceptable in respectable
neighborhoods

that is how it is, live with it

I AM CRISCO KATHY,TAX SEASON IS ALMOST UPON US. I CAN GET YOU THE BEST RETURN. IT MIGHT BE A LITTLE BIT ILLEGAL.BUT WHAT THE HECK,THE GOVERMENT TAKES TO MUCH OF OUR MONEY. BE SURE AND BRING A BIG CAN OF CRISCO WITH YOU. I WORK BEST ON MY KNEES WHILE SOMEONE SLATHERS MY FAT ASS WITH CRISCO. BRING A BIG CAN, I HAVE A VERY LARGE ASS.

Well Mr Dutchman I think that you do not know what a ROD OF GOD is. If you were a Key Clown like me you would know that it is a competition mobile ant.
One on the front and one on the back of a long GMC. SHOOT OUT. So that is why i must point it.

ITS A DAVE MADE WORLD??????

This is also heard on 40 meters from Hams.
And 20 meters, and 17 meters, et.al.

1293. Tram Penetrator dipole and other things

Newsgroup: rec.radio.cb
Date: 2005-07-03 02:32:10 UTC
From: Cliff <thecowboyace@yahoo.com>
Message-ID: <1120357929.962428.178940@o13g2000cwo.googlegroups.com>
Source record: 202180

Located at

http://albums.photo.epson.com/j/AlbumIndex?u=4030688&a=31812523&f= is everything that I have in my base station setup in a junk room. Will be adding a rotator when I get my Maco Y Quad antenna set up. Maybe I'll be able to get out and do some talking then.

I don't know what I am going to do with my antenna setup on my pickup. I am running, now, as I originally started out with, a single Tram Penetrator (Monkey Made - ran it a while co-phased but couldn't really tell the difference in tx/rx AND robbed it cause I needed one more of the Tram's to make up the horizontal dipole!) I have it mounted on the side of my metal toolbox and it does a fantastic job. Only thing is?!?! I am thinking of putting a 'tonneau?" cover?, youo know the hard plastic shell that covers the complete bed. Where in the same hill will I be able to put the Penetrator at?

Any and all suggestions will be greatly appreciated!
Take care God Bless
Cliff

Nope it you trying to control your world in ways you have no right to
expect.

I am a victum since you ask, a victum of your efforts at censorship. as
well as the vitum of your threats (to beat me kick my ass etc. No one
has offered violenece to you, dispite your hate filled venom

You no constitutional protection from being offended, No one is entitle
to be protected from people who are different
>

Not at all depraved.

Btw I am quite good with children.

Your contanst allusions to gays as child molestors is more evidence
that you are ahte filled homophobe

>
> that is how it is, live with it

Nope It isn't ain't even close

Bigot

vinnie

are we going to start acting like the hams now and shove our head up
our rectum so far we can not see the light of day or take a joke

we do sound a bit ridiculous when testing, just not as stupid as the
hams pretending they are pseudo-military or such

smile, we are here to have fun, and we do, this is a hobby, do not let
the hams drag you into their insane quagmire of behavior

Subject: Important Organizational Announcement

ARRA Founder Glen Baxter cuts a deal with Washington

Belgrade Lks, Maine., July 1, 2005 - In a surprise deal, ARRA Founder K1MAN and FCC legal representatives at Dewey, Cheatum, & Howe, announced today that all charges and NAL pending against K1MAN would be dropped contingent on a merger agreement between ARRA and ARRL. Under the proposed arrangement, ARRL would acquire the American Amateur Radio Association (ARRA), a leading provider of Amateur Information Bulletin Services. The deal would unite the two most prominent Amateur Radio organizations in the United States. Financial terms of the proposed acquisition have not been finalized.

"The acquisition of ARRA complements ARRL's already extensive offerings to include up-to-the-minute information and interactive discussion on what is happening in the world of Amateur Radio," said Jim Haynie, W5JBP, president of ARRL. "Together, we will be more effective in taking on some of the challenges facing Amateur Radio, such as BPL and Spectrum Defense. This brings us one step closer to being the national membership association for Amateur Radio operators."

The acquisition also brings the strong leadership skills of Glenn Baxter, K1MAN, to the ARRL organization. Baxter has been named ARRL Third Vice President in the move. "Mr. Baxter is a welcome addition to our management team here at ARRL," said David Sumner, K1ZZ, and ARRL Chief Executive Officer. "I look forward to his fresh perspectives and enthusiastic approach to running a service organization like the ARRL."

"Water under the bridge," said Glenn Baxter of ARRA about past frictions between the two organizations. "Today marks a new beginning for all of us. We're in this together now." Plans for collocating Mr. Baxter and Mr. Sumner in adjoining offices at ARRL headquarters are currently underway.

In an official statement, Mr. Riley Hollingsworth, K4ZDH, FCC Legal Advisor for Enforcement added, "Over the years, Glenn and I have become very close. I look forward to continuing our professional relationship as he assumes his new position."

In an effort to accelerate the shift to its new on-the-air image, ARRL has already filed the paperwork necessary to make W1MAN the official call sign of the combined organization. Joe Carcia, NJ1Q, ARRL station manager was thrilled with the change, saying, "What a creative way to reflect our

traditional roots while also letting our bold, new face shine through!" Broadcast operations at the facilities of ex-W1AW will be shutdown immediately. ARRA's state-of-the-art studios in Belgrade Lakes, ME will become the new source of all ARRL transmissions.

Amateur Radio insiders applauded the move. "These are interesting times for Amateur Radio," said Gordon West, WB6NOA. "I sense a likely shift in the ARRL views on many areas of the service. I think we'll be feeling the positive impact of this merger for years to come."

"This is big . . . really big," said Joe Walsh, WB6ACU, lead guitar player for the Eagles. It's exactly the kind of thing that will send our ticket sales through the roof. With Glenn on vocals, and Sumner on drums . . . this tour season will be our best since '73"

Audio aficionado and Amateur Radio entrepreneur Bob Heil, K9EID, also supported the move. "This is a good thing for Heil, and it's about time these guys got together", said Mr. Heil. "We are already working on a special commemorative W1MAN microphone to honor the event."

ARRL was founded in May 1914 by Percy Maxim, a leading Hartford, Connecticut, inventor and industrialist. Today ARRL, with approximately 152,000 members, is the largest not-for-profit organization of radio amateurs in the United States.

Why would I care about the ARRL? I am not a ham and the ARRL is one reason I never bothered with ham radio. I went into broadcast and electronic manufacturing instead. If the people I have kill filed are the best example of ham radio, it can die for all I care. As far as the cemetery, I don't have that many years left so I will kill file whatever reprobate I have to, to enjoy them in peace.

One thing is obvious. You have no manners, and no social skills.

Ya think? Well, the heatsink is plenty large enough. With a 600 HP blower it
should be capable of handling 10K.

Hey Hans, that was a good one. did you cook that up last
night down at the Legion Hall, while you were telling radio
hero stories?

The ARRL and the FCC have been involved in illegal and
unethical collusion for decades, which is one reason K1MAN
will come out the winner!

Hello H Nelson:

What frequency?

I have heard these stations before they are called number stations.
Someone sending a set of numbers that are in some kind of code?!??!?

Could even be sports bets??!?!?!?

Hello Landshark:

Wavin ah hand from deep inside the Southern California Mojave Desert. It will probably get 105 degree's today.

Man I am afraid the unsafe and insane fire works will out in force tonight. Got my chair on top of the roof ready for viewing all the goings on. Got HF, VHF, and UHF coaxes ready to reroute for the nights viewing on top the roof. Keeping in touch with all the locals and such.

I have some neighbors about a quarter mile from me, all boys from ages 12 to 17, so I am sure I will not need my binoculars. They didn't quit shootin stuff till 11 Pm lastnight, should be a good show.

Jay in the Mojave

Hello H Nelson:

I use to get a couple of Bozo stations coming in from another county, turing a Moonraker 4 beam rejected thier signal right into the noise. All gone! Kind of neat!

Yeah sounds like signals from south of the borader. I worked in Panama for a while. Near the Panama Canel. I listened to a lady neamed Sally on 31.1 Mhz FM, on the VHF Low Band. Shes was a crack up to listen to.

"You boys better not take too long for lunch, the ol man is out there lookin for you's all"

So the stations in the US do hammer the Sounthern Mexico, Central America, and South American areas.

Maybe a set of vertical antennas placed in the right location would reject the south of the boarder stations for you.

Hello, Sharkie!

A happy 4th right back at ya! I hear fireworks going off now. Never can tell, I heard a store got shot up three nights ago by machine gun fire about 5 blocks from here.

Nothing like city living :)))

73 from Rochester, NY
Jim

You are a pervert scum, Fort. Go away.

--
Tracy Fort's necrophilia and a deceased seventy two year old cancer victim, who
happened to be my mother:

==========
==========
Dug her ass right up! She was too damn ugly to have sex with before
she died. The old bag o bones fell apart in my hands! She didn't
complain about much either other than the lousy sex she got from those
foursomes with you, Mike and her husband.

love dem bones....dem bones....dem bones

Please accept my apology for abusing her. I'm sorry that I did not
toss her back into the black depths that she came from. Next time,I
will be sure to take care of that. I promise that I will refill the
hole with the dirt that came out too. In addition, I will re sod the
plot at no additional charge. Let me also apologize for the milky
substance in her left eye socket, that was an unavoidable accident.
please feel free to include this post in your sig file!

Dem Bones! Dem Bones! Dem Bones! I loved playing dem Bones!
Dem Bones! Dem Bones! Dem Bones!
I loved playing dem Bones! I ran my fingers uo and down dem bones and she began
to come alive!
I played dem bones like they never been played and she smiled for me all the day.

M/Sgt. Tracy Fort 116 AMX
250 Martin Luther King Blvd.
Robins ANG,
GA. 31098-2009

beerbarrel@cox.net

http://www.qrz.com/detail/KE4ODD
==========

==========

This .sig file will continue until Mister Fort posts a sincere apology to all cancer victims and their families. His refusal to do so says more about his attitude and upbringing than any of his thoughtless and hurtful postings in rec.radio.shortwave. He seems to be very proud of the fact that he can buy expensive radios using the refunded deposit money from his empty beer containers and has frequently posted the fact. It appears he is well on his way to purchasing his next radio.

She did fine in the bisexual contest, but she didn't like the horses.
The AKC will put her on a bus back to Rochester as soon as she finishes
being the party favor.

It's not bigotry if it's true.

You have sex (per your own admission) with other men.

Ergo, you're gay.

Where's the bigotry in calling you "gay" if you are indeed gay?

Or are you now withdrawing your claim of having sex with men?

If we ask you to leave, or be silent, it is "gay bashing", the "visual images" your "lifestyle" brings to mind is/are offensive to me.

No. This is not gay bashing, it is insane rudeness on your part, and like some spoiled child I expect that you will force your bad behavior on us all.

Rarely will I banish one to the "bit bucket", you make it easy to do so without regret...

Oh, for crying out loud. Listen to you. So what if someone dislikes gays
(note no Caps there..) or has a dislike for blacks. Or Illegal Aliens. So
what?
What do you expect them to do? Roll over and go belly up simply because
"you" accuse them of being prejudiced? So, big deal. Who are you in the
scheme of things? What gives you the right?
One can easily loathe these Liberals who think, erroneously, that their

accusations of bigotry or racism will cause Mainstream Mr. and Mrs. America to recoil for fear of being 'branded' by the mewling leftistas as bigots. Sorry, boys. Your accusations no longer hold the sting they once did. Mr. and Mrs. America no longer care about you or your political correctness bovine scat.
Oh, and one more item for you Leftistas...it is my right to feel or be prejudiced and it is my right to flaunt it in your face.
Now, what are you going to do about it? Call me a "Bigot"?
Big deal.

So what I expect that hey can be deal with the fact it has nothing to
do with ham radio.

And I don't say that they can't hate and laothe me if they like merely
not harrass me for it

BTW if some of these Basers could admit they were doing it would be an
improvement

> What do you expect them to do? Roll over and go belly up simply because

But not to try and harrass someone out of public life. I have always
agreed you have those rights

BUT one it is others that have engaged in stalking to find these
"facts" andd then try to use them to silence me and others

> Now, what are you going to do about it? Call me a "Bigot"?
> Big deal.

So what:

Here where I live you get to see it all. Blacks here are terribly discriminated against. The cops seem to always be picking on the ones carrying stolen tv sets out of other peoples apartments, stealing cars, involved in drugs, rapes, gang murders, beatings, stabbings, etc. I think it is terrible, they should turn them lose from the prisons where they make up 80% of the population and go live next to "an_old_friend."

He could take care of them there and protect them from such vile and ugly treatment as being confined for committing crimes.

And I am prejudiced against felons, I don't want them in my neighborhood or around my children even though they are grown! (now if they prove themselves "rehabilitated" after a few years in public, I am willing to accept them back.)

Now if someone asks me, "Do you hate all blacks?" Of course not, the ones gainfully employed next to me and who are safe to be around I like. But it takes me a bit to figure out which is which!

And frankly, there have been a few who I was too anxious to trust and they proved that trust wrong--so I am a bit leery of all these days--including people as "white" as I am!

But sicko perverts like "an_old_friend", NO. I will always remain prejudiced to having such perverted people about me--my "pursuit of happiness" alone prevents this... they sicken me and I have the stones to say it!

Mark, I don't "hate" you at all.

How can I "hate" someone I am laughing at so hard...?!?!

> > You have sex (per your own admission) with other men.
>
> realy? when?

Mark, you only make a bigger fool out of your self and
coincidentally prove my assertions that you're a liar by trying to
dodge and deny your alternative sexuality choices.

> > Ergo, you're gay.
>
> Nope not nessaryly idiot I could be gay or i could be BI

If your penis is invasive of other males, you are gay.

> > Where's the bigotry in calling you "gay" if you are indeed gay?
>
> It is in saying I can't post or tin harrassing me for it

Who said you can't post?

You're doing it, aren't you?

And what's "tin harrassing"...?

> > Or are you now withdrawing your claim of having sex with men?
>
> No nor am I confirming it either

You've already acknowledged that you do.

> It is none of your bussnes and has nothing to do with the ARS

It's "my bussnes" since you made a point of bringing it up in a public forum some several years ago. It's the "bussnes" of anyone who cares to read the old posts.

> in claiming it does YOUR prove yourself a bigot

In denying that you wrote what anyone who cares to research Google archives can see that you wrote proves you a liar.

Again...

There is some spanish speaking woman that stays on channel 38 AM.
In the evening she keeps saying the same stupid phrase over and over and over. She has an echo box turned up, so you get to hear it twice. She's like a bird that only knows one chirp. I have no idea what she is saying, but it gets on your nerves after awhile especially since I listen on LSB 38. I put up a dipole with the null spots to the south just to cut down on AM interference from south of the border.

1369. What is up with all the skip roar on channel 5 AM?

Newsgroup: rec.radio.cb
Date: 2005-07-05 14:04:00 UTC
From: Scare Crow <ScareCrow038503850@hotmail.com>
Message-ID: <cf4lc1hu69pgvnsof3lj99a7o1hc1419b7@4ax.com>
Source record: 202256

What is up with all the skip roar on channel 5 AM? From the eastern U.S. channel 5 AM has a noise roar when skip starts rolling only equaled by channel 19. It sounds like millions of signals all being run together. Most of the time there is no single voice above the roar. The signal strength consistently peaks in the evening around S9 or better suggesting it is coming from the west or south west. Is channel 5 the trucker channel of some hispanic southern country?

Hello, John

Well, I had an interesting discussion in another group. Too bad one news article has disappeared or I'd send you the URL where a black guy got 35 years for stealing a black and white television set.

That aside, I can fairly safely assume you lean towards the French.

Here is part of the discussion I had, along with a URL from a friend in England:

********** begin copy *********
Hmmmm, Jim you're right, and the way this afternoon has unfolded; international tact and diplomacy wouldn't appear to be high up on my list of assets either! Mind you Jacques Chirac has been very rude about Finnish food too!
http://www.theaustralian.news.com.au/common/story_page/0,5744,15835185%255E2703,00.html
Simon

********* end copy *********

So happy to understand that your, along with the French, believe your thoughts are higher and more important than everyone else's.
:)

Too bad I hadn't seen your post to get my dander up a bit earlier or the person that insulted Simon would have been toast in that group. Instead, I waited to see if the thread would cool down. Fortunately, the thread cooled and the woman who insulted him is still a member.

Don't worry; you're not alone. Here in Rochester, NY, christian (and I use the lower case as I don't believe their beliefs lie along the lines of that left-leaning guy that was crucified 2000 years ago - you know the guy; the one who threw the money changers out of the temple.) churches are now asking their congregations to dress in camouflage and have a missile in their sanctuary!

Here is that URL:
http://www.wokr13.com/news/local/story.aspx?content_id=DD427162-B871-4F38-A532-6ACBD4CA684D

I send that information to you so that you know that I and many others truly understand what you and your ilk are about.

73 from Rochester, NY
Jim

Jim:

You got me sized up alright. Too bad the guy only had to do 35 years
in prison, too bad it was not life (but, only if he had priors--which
I would almost be certain he did!)

John

you freaky-deeky

i would beat you silly if you just looked sideways at a child of mine

if i lived in your community i would be outside your house with a
warning sign right now

>violations yet. But there are sure a shitload of

>them.

Right. Anarchy is what will take place when China attacks Taiwan in two
to three years and Bush has sworn to defend Taiwan at all costs. Can't
you hear it now? Bush: "Taiwan imposed no threat to China. They must be
protected"
China: "Iraq posed no threat to the US. Fuck off!" All predictions
concerning the lies and failures of babyBush have proved true.

>China seems to be profitting nicely at the

>USA's expense. My guess is that they are not

>going to endanger losing that by invading

>Taiwan. China has a weird progressive sort of

>Communist Gov't, that is now allowing

>capitalism. Seems to be working fine for them.
>But I don't think they are a military threat

>because of it.

(shrug) Many disagree with you.

Hello, John
Well, I had an interesting discussion in another group. Too bad one news article has disappeared or I'd send you the URL where a black guy got 35 years for stealing a black and white television set.

_
Wonder what he'd a got if he'd a done stoled him a color one.

1382. Re: What is up with all the skip roar on channel 5 AM?

Newsgroup: rec.radio.cb
Date: 2005-07-05 23:50:34 UTC
From: iamnotgeorge@webtv.net
Message-ID: <8790-42CB1CCA-228@storefull-3256.bay.webtv.net>
Source record: 202269

From: ScareCrow038503850@hotmail.com (Scare Crow)

What is up with all the skip roar on channel 5 AM? From the eastern U.S. channel 5 AM has a noise roar when skip starts rolling only equaled by channel 19. It sounds like millions of signals all being run together. Most of the time there is no single voice above the roar. The signal strength consistently peaks in the evening around S9 or better suggesting it is coming from the west or south west. Is channel 5 the trucker channel of some hispanic southern country?

_
Sorry about the splash. I've been getting lots of airtime lately. I'll turn my beam the other way. Where you at?

    The ops at KPH/KSM are all either former station ops from
there or experienced shipboard radio operators, all holding
Radiotelegraph Operator Second or First Class Certificates. The "wheel"
(VVV tapes) will of course be used until traffic is to be passed.
    If and when they switch to K6KPH on the ham bands (using
drastically- lowered transmitter power - 1.5 KW rather than the 15 KW
that those transmitters were built to deliver) the ops - same guys and
ladies - will be those who also hold FCC Radio Amateur licenses.
    They will have no problem with sending clean Morse.
--
      73 de K2ASP - Phil Kane

Fly-on-the-wall MRHS (KPH/KSM/K6KPH)

The poor chap should have gotten off completely. He would have to be insane to steal a black and white set.

Hello, mate

Please remember that he stole the dang thing 35 years ago! Color TVs were
neither cheap nor common. LOL

Best regards from Rochester, NY
Jim

Dang! You are actually showing signs of intelligence. Notice how both O.J. Simpson and Michael Jackson were acquitted?

Not to say they shouldn't be; there were a few problems with both cases, but you make an interesting point.

73 from Rochester, NY

OK, he has been spamming this and other news groups but he does not
spoof or change his headers so why don't you just kill file him if it
bothers you? You only have to create one filter for him. There is far
worse on the news group. There are quite a few posting stupid,
disgusting off topic crap and flames all the time.

Do you have a link without having to use the plug in? I refuse to use
the plug in as I do not like all the advertisements dancing in my face.
If not, there are plenty of other vendors. Thank you.

Richard

Let me answer this in the only manner you understand:

Go outside and see the world, you asshole! Get a life.
Go talk on the radio. Won't the neighborhood kids talk
to you on FRS, or do they also key on you! No life...

(last response you'll ever get from me, no matter how
many times you'll try)

Steveo:

Ever since my buddy ronnie regan closed down the mental wards (nut houses) in california you have been harassing people at random. Give them a bit of a break son, do it for your president, your congress, your supreme court, your country and your fellow citizens.

I know you are a bit peeved about the lack of resources to handle you particular condition. Be patient, as soon as rummy and me can wrap up our little "death for oil" business venture in the middle east, perhaps we can squeeze out a few bucks and take care of you.

Just concentrate on holding together that declining mental condition of yours for another decade or so and we will get to you son.

Read my lips, "We will leave when we have the oil."

Steveo:

Now, now son, there is one hell-of-a-lot more freebanders and cbers
than hams.

Think about it like this, company is coming and you are going to have
to give up your room for a bit.

Do what is right for the country son, standing their sniveling in your
pink skirt you just look foolish, get a hold on yourself son, take it
like a man!

Here in america, son, people are empowered by their creator. We the
government have no right taking away the radio bandwidth which their
creator bestowed upon them.

I am afraid you are just going to have to learn to play well with the
other children and get along. Perhaps a freeband tech will help you
set up a station and get on the freebands and learn the ropes.

Do what is right for your country son. Your president is counting on
you to be a team player now, remember that.

Laura, bless her little heart, has a bad addiction to freebanding.
Jenna gets together in that whitehouse basement with that 50KW collins
linear and I don't see them for days. Like mother, like daughter I am
afraid.

Almost scarred the secret service to death with the stealth antenna
they were using (the whitehouse flagpole) melted and caught fire when
it shorted and heated up the coils with the 50KW. Just thank goodness
it is not against the law to burn a flag, yet. No one would like to
see their presidents first lady in prison (however, I do have a second
and third in the oval office, just in case :)

But hey, everyone has to have a hobby.

Very kewl. You figured it out, huh?

Time for a header change I see...

Warmest regards,
John

Does anybody have the mod to enable transmit above channel 23? Apparently, this radio was made in the 70s, but it did have extended receive range. A jumper was able to be added to enable extended range transmit.
Thanks in advance.

Pete

ok assbite. You crossed the line!!!

I just sent my net logs to my isp and had a rep on the phone.

Buddy, you just screwed up BIG TIME! This is my corporation's net, do
you even understand the implications of that? ROFLOL

Start hoping you proxyed though a bunch of isp's in third world
countries. Spoofing is one thing, using my corporations network
WITHOUT it's permission is a whole 'nother ballgame friend. That IS a
computer crime!

And, let'us hope you didn't do it across state lines huh? You really
don't need a felony on your record, do you? <grin>

Oh, and by the way, I just happened to find a little email bomb. Now
I wonder who put that there? And, where a net-trace on that mail will
end up. Oh well, maybe my people can help with that, huh? SEE YA!

Warmest regards,
John

One thing I learned in the electronic repair business was to never
take a check from a ham, cash only. Hams will always stiff you, but
I never met a freebander whose check did not clear. A Frebander's
check is always good.

Yuk. Plonk again. Goodness... this place is full of 'em. I think
maybe I'll go to another bar and order up a cold one and see if the
clientele there is of any higher caliber. This place is one scary
outfit.

Is this commonplace, or is it... wait... this is a cross-post. Guess
it's not isolated to this particular newsgroup.

Adios, loser.

I got some bad checks from CBers when I did 2-way radio and
commercail sound systems about 20 years ago in Ohio. I got even with
one jerk. He would put just enough in his checking account to pay his
rent and utilities so I waited till the first of the month to resubmit
the check. It cleared, and his rent check bounced. Boy, was he pissed!
;-)

After that, it was cash only, unless it was a commercial account.
Most of my customers were schools, churches and factories who didn't pay
in cash, but wouldn't write a bad check because you could file papers to
seize assets to cover a check and they weren't returned till the payment
was made.

So how many have these 'certain very closely guarded codes" to use for
emergency? Do all emergency personell have access to these codes?

Hardly. How many emergency workers at the scene of a disaster have these codes? Probably none.
Ham radio is included in NORAD's emergency planning, cell phones aren't. Why? Because they know cells phones are practically useless in a real disaster.

What good do those 'very closely guarded codes' do if all the cell sites are down?

Pete,
It is illegal to use it as a CB when modified...don't jeapordize your privileges...get a radio that's legal on the CB band...they are cheap...you will spend way more modding that rig to other CB channels than you would getting a cheapo 40 channel radio.

Don't be a keyclown, dude

fascinating. its rather funny. you don't have to be a ham to bounce checks
(seen plenty of them from the likes of: little old ladies, young couples,
professionals and even freebanders and regular cb'ers AND hams. doesn't
matter which group you are in, a check bouncer comes in any form.

perhaps you should reconsider your overgeneralization?

I have several radios.....this is a repair for a friend of mine.
When first received, this unit did transmit all the way up to channel 40. My
friend removed an extra added switch and I removed what I thought was a
sloppy job of some solder jumpers. The rig does have the EPROM upgrade, as
evidenced by the fact that it receives at least up to channel 40.
I don't use modded rigs on CB.....only my Cobra 148. I keep the ham
rigs on the ham bands.
Thanks for the feedback!

Pete

Who's that?

BTW, did I mention repeaters suck?

The owners/control ops read whatever they want into
Part 97. I'm simplex only now. I told someone on
simplex last night that I wouldn't get on a repeater
now if a tornado was bearing down on me.

They wanted me to take over Skywarn, but since the control op
doesn't seem to like the way I communicate (fully in compliance
with Part 97), he wishes I wasn't on the repeater. He got his
wish. He didn't even have the balls to tell me. I heard it 3rd
party. The person that had been doing Skywarn isn't available
anymore in the afternoons, and they need a replacement. Well,
they f*cked themselves. It won't be me.

Good luck to them.

They're going to need it. The club is pissing people off left
and right, and no one is renewing their dues. Their hamfest
isn't working out, either. To tell you any more, you might be
able to figure out which club it is.

-Scott, KB3xxx

(ask in a private email with YOUR callsign)

I'm on simplex and EchoStink, once in a while.

Thanks Scott, but no need. I already have your real e-mail. I just didn't happen to notice it right next to the other one you have :))

>
> I'm on simplex and EchoStink, once in a while.

Haven't been very active on either Echo Link nor the local repeaters. I've got to change the memory backup battery on the HT. If I leave it off overnight, it looses its' marbles.

I can be silly too :))

I can use Canadian repeaters just fine from my HT with a whip antenna on it. No external power supply and no external antenna (beyond the whip attached to the HT). Oh, I'd best specify - that is from Rochester, NY, not up in Canada.

That is across Lake Ontario using only 6 aa alkaline batteries. I have no problem accessing Bristol Mountain either (located a bunch of miles away). Nor about 13 other repeaters in the area. Which gives me a reliable range of 40 or 50 miles (or more) in any direction to a repeater. Add a bunch more miles from there to a mobile or another HT.

Run your linear from your cb (with gas at $2.25 per gallon). See what you can hear on a reliable 24/7 basis. I do not have to contend with someone yelling "audiooooo".

BTW, I'm only 155 pounds and 5' 8" tall. No fat.

Troll, troll, troll your boat :)))

With all due regards from Rochester, NY
Jim AA2QA

Hey, I hope you didn't have any friends or family in that
London crap. It's scary shit, I stayed at one of the hotels along
Russell Sqr when I was over there in 1989.

Landshark

Hello, Sharkie

I have fellow group members who have had family members in the area. So far none of their families have been hurt, but some were delayed quite a bit.

It is quite a mess. I honestly believe that it is about time that a *lot* of troups go into Afghanistan and Iraq and dismantle the places, brick by brick.

The current status quo reminds me too much of Vietnam (where I served 11 months). Nasty business, but the hatred eminating from those countries has got to stop, or, at least, the folks co-ordinating it have to be put out of business.

73 from Rochester, NY
Jim

I have a Turner Mobile mic for sale. Model M+2/U. Takes (and needs) a 7 volt battery. Seems to be in fairly decent shape.

Have also what may be one or perhaps two CB "Receive" pre-amps. This gizmo was made by Antenna Specialists. The one unit looks tunable.

A Cobra Power Mic - New, but plug was changed for a "proposed" buyer.

Stock mics for Cobra, Realistic, maybe a couple others. Some new, some pulls.

All the above is listed AS IS - whether new or not. Aside from the Cobra Power mic, the rest hasn't been tested.

Also have a Realistic SSB set, AM works, SSB not tested. Cobra 139XLR Base - came from an elderly lady's home, kept in good shape. Not bench tested - yet.

2 - D104 Lollipop mics in decent condition, came from same place as the Cobra 139XLR. Should be ok, but not tested. ALL items new or otherwise WILL be sold AS IS.

Shipping would be extra. Payment via Pay Pal OR Postal MO only. Shipped next shipping day of payment received.

It's coming on like a hurricane

For the first time since 1985 (Hurricane Elena), this area (Gulf Coast) is seeing 12 ft. seas. Dennis is giving pause for the cause, but this time, this one is welcome. Damn red tide came in last week and the beaches are filled with hundreds of thousands of dead fish. Gag grouper (deep sea fish) the size of kitchen tables are washing up on the shore. Dennis will cleanse this stuff right out of here. I'm taking the windsurfer out this afternoon along with some other members of a local windsurfing club, but we're going to be vying for elbow room with the surfers. Some of the beaches are already jammed with surfers and many more are descending on the area from the east coast. I was down at the dock at 5:30 this AM and the parking lot was half full. Funny thing though, skip is always perfect for us across the Gulf pond to the Big Horn when a major storm is in the Gulf. Last time one was this similar, Nebo and I tagged right across the top of it. I'll have it on either 555 or 38 low today. Take 'er easy.

I think this is the first time I've ever heard anyone talk about CB in an emergency communications context.

I guess the police still routinely monitor channel 9 just about everywhere, but just about every square inch of North America is covered by 2m repeaters, too. I can only remember one occasion when I had to make an emergency call from the road. I didn't have a cell phone or a CB handy, but I did have a 2m mobile, and I was able to get in touch with a ham who called the police and fire departments for me. The repeater was about 30 miles away, and the ham was 75 miles away, but the state police are local everywhere.

I don't think ham radio has become irrelevant as a result of a few other services backing them up. You don't see too many CB'ers or cell phone enthusiasts conducting SETs or training with paramedics.

You can't count on hams to tell you where the speed traps are either.

Actually, a lot has to do with the population density of a given area.

I suspect cb is much more useful in sparsely populated areas as you will find few repeaters and even fewer hams. Of course, everyone (myself included) love to give opinions on what works based upon their local situation. Human nature, I suspect ;)

50 watts and a 5/8 wave antenna does real good on VHF.
A lot better then one would assume unless you've tried it.

It took me two months to realize that I could hit places on VHF
that one could only dream of on 27 MHz.

I still use my CB. I also use my 2 meter.

Now, if our Gov't would get on the WRC03 bandwagon...

Hello, Scott

50 watts into a 5/8 wave would likely fetch you 80 or 100 miles (I'm
guessing here) on ssb or cw. You are starting to get into scatter a bit.
Of course, I suspect ssb stations (and cw) are very likely to be
horizontally polarized whilst fm is invariably vertical polarization. Using
the wrong polarization can result in a hefty loss.

Several hundred and a beam and you'd likely cover a couple of hundred miles
24/7 due to scatter. The signal won't be strong far out, but would be fine
on ssb or cw.

Of course, keeping the cb *and* the ham radio give you even more choices ;)

1506. Who needs the ARRL, anyway?

Newsgroup: rec.radio.cb
Date: 2005-07-10 05:27:25 UTC
From: Who Needs The ARRL? <JIm@GuessWho>
Message-ID: <daqbi7$5k0$0@pita.alt.net>
Source record: 202393
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.shortwave

The ARRL is not a necessary institution these days. It is self-propagating, demands hefty dues and represents less than half of the licensed Amateurs in the United States.
Besides, what does one get for the $40.00 per annum (or is it more?) fee? A glossy magazine rife with advertisements? Admission to 'private' sections of the ARRL web site? A monthly 'bulletin' sent to your email address? (more spam)
Oh, wait. ARRL members get to vote on proposed rule changes, too. As if the FCC has ever given that much credence.

I guess there are still some old warhorses out and about who feel that it is a mark of distinction to have the ARRL logo on their QSL cards...especially those who boast of being part of the elite few, the proud, the Life Members.

One could likewise spend their Amateur Radio $$ on bigger and better things, such as paying good money after bad to join the Ten Ten Club, yet another wasteful expenditure of hard-earned money. Why not start a Twenty-Twenty Club? One could double the dues paid to the Ten Ten Club and claim twice the elitism.
The Twenty-Twenty Club could do as the Ten-Tenners do...refuse to speak with those not a member of their snooty group. Double the frequency, double the elitism.

CQ Contest, anyone?

I can get more distance with 50 watts VHF-FM then I do with a 2x455 box on 27 MHz local. With conditions, 27 MHz will work wonders. With tropo, I've worked 100 miles on VHF with the mobile antenna. With my portable 3 element beam, I did almost 200 miles.

There is a guy in DC that works FM horizontal. I can tell he's in there when I'm vertical. Since I can flip my beam 90 degrees, I can work him horizontal. What a difference 20db can make!

> Of course, keeping the cb *and* the ham radio give you even more choices ;)

Nothing like 19 on the highway, when the drivers aren't cussing too much.

From: sDcOoNtTtS_PuAnMiMtE_69@yahoo.com (Scott in Baltimore)
Actually, a lot has to do with the population density of a given area.
I suspect cb is much more useful in sparsely populated areas as you will
find few repeaters and even fewer hams. Of course, everyone (myself
included) love to give opinions on what works based upon their local
situation. Human nature, I suspect ;)

>50 watts and a 5/8 wave antenna does real

>good on VHF.

>A lot better then one would

>assume unless you've tried it.

Yep. Same can be said with a fiberglass stick out on the water.

>It took me two months to realize that I could hit
>places on VHF that one could only dream of

>on 27 MHz.

You talk to other constellations? <g>
Seriously,,there aren't many places on earth 27 mhz can't reach.

>I still use my CB. I also use my 2 meter.

2 meters can be fun in certain instances, but it lacks that certain,
uh,,energy that is to be found on HF.

>Now, if our Gov't would get on the WRC03

>bandwagon...

Our government needs an entire new system and leadership altogether
regarding the FCC (and the IRS, INS, NSA, FBI, FDA and probably a few
dozen others) and start over from scratch..

1511. Question on antennae

Wire antennae in particular.. Is there a preferred material? Copper, steel, stainless, etc?

If copper is better, for whatever reason, is it best for it to be bare or would I benefit from an electrical wire with either plastic or varnish insulation?

Guage.. am I better off with a with a 10 gauge wire than, say, a 22 gauge? If thicker is better then where is the limit of gain?

John

I have mixed feelings about the ARRL, but I think he has a valid point.

First of all, I really hate QST. I find the April fools articles highly insulting (Scientific American used to do it, but they took the time to make the articles creative and thought-provoking (not to mention highly convincing). It's as if QST just has some extra pages every year that they can't fill with useful information.

Another thing that really burns me about QST is the proportion of articles about putting memory or peripherals in your computer, or using the internet. Not only are there plenty of magazines out there that are doing a much better job of supporting the PC culture, but the internet is also arguably the reason that kids are not interested in ham radio anymore.. well, that, and the ARRL is still trying to attract youngsters with the exciting prospect of talking to people around the world. They haven't noticed that kids are carrying cell phones to middle school and making penpals on other continents with AIM.

Finally, I really don't like contesting at all, and this is a big part of QST's content too. Contesting brings out the ugliest aspects of most hams' personalities, and it's just not interesting to me to fight qrm and lousy bands to exchange a callsign, qth, and get the hell off my frequency, over and over again,

I would happily join if I could do without it, but as it says in the masthead, membership and subscription to QST cannot be separated. Here is the reason, in case you're wondering. I worked for a pretty-good-sized magazine, and I spoke with QST's editor so this isn't something I just made up. Magazines do not get rich selling subscriptions. They do, however, have to demonstrate large circulation in order to convince advertisers to part with their money. QST is a big money maker for the ARRL, but if half of the members quit their subscription, Kenwood, Icom, HRO, and all the others would invest in other publications with better numbers.

Is the league wasting our money? I don't know.. I took a break from ham radio for a few years while pursuing other interests, and last year when I got back on the air I discovered a new band. Okay, well, it's just a few frequencies, but I know that in the past hams have gotten stirred up over the prospect of losing a band to wireless cable, paging, or whatever, and the ARRL played a big part in defending our spectrum (or at least that's how I remember it). I know the FCC isn't in the habit of just giving up frequencies too, so I have to think that the league's lobbyists had at least something to do with that.

Maybe it would be perfect if we could get rid of QST and get the league to put those dollars and personnel into the other, more practical functions, but I suspect that, aside from the three of us, just about everyone actually likes reading that rag, and there isn't much of an incentive for them to scrap it.

The editors and directors of QST are really nice people to talk to, and I encourage everyone to call them and (tactfully) share your feelings. If nobody complains about it, why should they fix it?

The all too clueless "cooltube" post a list of ancient crap FA.

Most of the time I just ingore your crap offereings.
But your rant got my attention.
Many, perhaps maybe most people in this and other NGs
already KNOW about Ebay. And go there to look for things
they want. Looking at this list I see very few things(1) that relate
directly to SW. Maybe you should at the trim your offerings to
stuff that is on topic.
Or even better, just stop posting this crap.

I make it a point to never buy from spammers and sir your
offereings are clearly spam. In the good old days jaber mouths
like you had their coax pinned. Too bad there is no similar
method of stoping you today.

Terry

Message-ID: <11d2e841ghl2l97@corp.supernews.com>
Source record: 202460

Hello John:

Copper wire is the best, and its the cheapest. I like to use the enameled wire. As a kid I would unwind motors and such to get the wire. But it can be bought inexpensively.

What type antenna are you planning to build?

Jay in the Great Mojave Desert, ...just down the road ah ways from the fillin station.

Miss Dinah, down at the fillin station has gas that is pretty well pricey, but then the next stop is a pretty long way down the road. She has great prices on ammo, fishing and hunting stuff, swamp coolers that no one can beat the prices. When I get gas, and a sandwich, I put a few sticks of gum in my mouth, and act likes it chewin tabbaco, then purposely slur my words when orderin gas, she hates that! hehehehhee

>varnish insulation?

Copper and aluminum are nearly identical in their RF properties, and
you wouldn't notice any difference between them.

Bare copper tends to corrode more easily than aluminum, so if you use
copper outside make sure it's insulated. Enameled copper is best. You
can insulate any exposed copper with spray enamel or by dipping it in
melted wax.

>Guage.. am I better off with a with a 10 gauge wire than, say, a 22
>gauge? If thicker is better then where is the limit of gain?

The wire is too thin when it won't support its own weight, the
weather, or the wildlife -- 22 AWG might be about the smallest
practical size for a 9' leg. Actually, I wouldn't even bother using
anything that small -- you can get lots of good enameled copper by
scrapping an old motor from a furnace, washer, dryer, etc. Aluminum
fence wire can be had pretty cheap at your local hardware mall. If you
want some really big wire, bundle up some smaller wire and twist.

Actually, a lot has to do with the population density of a given area.
I suspect cb is much more useful in sparsely populated areas as you will
find few repeaters and even fewer hams. Of course, everyone (myself
included) love to give opinions on what works based upon their local
situation. Human nature, I suspect ;)

>50 watts and a 5/8 wave antenna does real

>good on VHF.

>A lot better then one would

>assume unless you've tried it.

Yep. Same can be said with a fiberglass stick out on the water.

>It took me two months to realize that I could hit
>places on VHF that one could only dream of

>on 27 MHz.

You talk to other constellations? <g>
Seriously,,there aren't many places on earth 27 mhz can't reach.

>I still use my CB. I also use my 2 meter.

2 meters can be fun in certain instances, but it lacks that certain,
uh,,energy that is to be found on HF.

>Now, if our Gov't would get on the WRC03

>bandwagon...

Our government needs an entire new system and leadership altogether
regarding the FCC (and the IRS, INS, NSA, FBI, FDA and probably a few
dozen others) and start over from scratch..

A vertical over fresh or salt water will perform wonders. Even a dipole or
yagi mounted at the appropriate height will gain up to a 6 dB advantage over
the same antenna mounted over poor ground. This is due to ground reflection
(enhancement) at low elevation levels.

27 MHz (as well as 10 or 12 meters) can and does cover most of the globe.
At limited times. Other than during the day near the peak of the sunspot
cycle, however, you are limited to sporadic e propagation. This can cover
1000 miles or so, single hop, and sometimes one can achieve double hop for

many more miles.

Two meters can also cover the globe, but you need a *very* well equipped station. Including a multiple yagi array that can be moved both horizontally and vertically. Fed with several hundred watts, you can work most of the world via moonbounce. No more practical for most folks than trying 27 MHz for worldwide coverage. That said, a couple hundred watts into a single yagi will, at times, allow you to work the *big* stations via moonbounce, but it is very difficult.

If you are talking scatter (more appropriately, tropospheric-scatter), then you'll find that 2 meters should cover up to 300 miles, depending upon mode and effective radiated power. This type of propagation is virtually unaffected by time of day or night, season, or sunspot cycle.

With proper tropospheric enhancements, Hawaii to California have been covered a number of times on two meters.

Sporadic e will affect 27 MHz much more often than two meters, but if you are talking about continuous coverage 24/7, there isn't a whale of a lot of difference between 27 and 144. In either case, if you are trying to work towards the extreme in distance, you'll be better served with ssb than am or fm. More power won't help much as there is a limit to the height of the scattering volume in the atmosphere which therefore limits the maximum distance you can cover.

Well, if you were listening to something that boring to you, you
probably have enough sense to change to another repeater or turn the
radio off. James evidently can't do that. (I'm posting from my chair).

I, personally, would be bored silly-probably a main reason why I never
felt motivated to become a ham. (I'm posting from rec.radio.shortwave.)

if its a very long antenna such as a SWL or a 80 meter ham antenna then
copper coated steel works good and will not stretch with the weight...

When making a quad for 11 meter work, I used 12gauge house wire. I went and bought xx number of feet and stripped the insulation from it. ONe does need to paint it to keep it from oxidizing though.

heh. try telling that to any EOC office in any county in the US. you'll be laughed right out of the office and probably hounded right to your car as someone who needs to go back to school.

you haven't been listening much on 11 meters of late, have you. its still filled with yahoo's of every description and there are nutcases on there that won't give a rats ass if you are in a life threatening situation. they'll just key right over you until you die.

by contrast, the amateur radio community has some well trained people (that training is provided at classes offered by officials of those very same EOC offices). if you call in an emergency on the ham bands, you are certain to get some useful help, even if it comes in the form of an old man or a young kid sitting at the other end of a multi-hundred mile linkup (it has happened before).

also, contrary to what you might believe, most of the phone systems aren't designed to have everyone in America on at the same time (which will most certainly be the case in a natural disaster or a man made one). regardless of the "codes" you speak of, if the system is busy, its busy and NOTHING you can do will get your call through any faster (and you'll just tie things up that much harder for someone with a real emergency anyway).

just because you don't like hams, doesn't give you the right to trash the services they offer, WITHOUT PAY and often at their own expense. can the same be said for the typical cb operator (without any formal training)? I say: NAY!

besides, the last ham fest I was at (williams Az), there were a lot of young and old hams there and not many of them would even match your description.

of course, we only have your words on what they appeared (at least to you). what the hey. you must need a white cane and dark glasses (you certainly

sound blind to the truth to me).

Thanks all for the good stuff so far, my mistake in not specifying an antenna for a CB if that makes any difference.

Cliff, if you've got a good electrical supply near you, you can buy bare copper by the foot.. If you get lucky they'll have magnet wire, all varnished and ready.

John

I know of no emergency service agency that would so quickly dismiss
the potential of CB radio.

>you haven't been listening much on 11 meters of late, have you. its still
>filled with yahoo's of every description and there are nutcases on there
>that won't give a rats ass if you are in a life threatening situation.

Sounds like what was said about the people of NYC before 9/11.

>by contrast, the amateur radio community has some well trained people (that
>training is provided at classes offered by officials of those very same EOC
>offices). if you call in an emergency on the ham bands, you are certain to
>get some useful help, even if it comes in the form of an old man or a young
>kid sitting at the other end of a multi-hundred mile linkup (it has
>happened before).

Do the math: According to info on the net there are about 650,000 hams
out of roughly 300,000,000 people in the US. So each ham must be able
to handle emergency traffic for 461 people, assuming every station is
willing and able to operate during an emergency. But that isn't the
case. So just to make the numbers a little more realistic, let's say
that only one out of every five hams can be up and running off the
grid (assuming all the hams in the zone survive the disaster). The new
ratio is 2300 people per ham. Now how many people know (or can find
out) where their local ham resides? Not many, I'm sure. Let's say one
out of ten. So that ham isn't much help unless the station is mobile.
How many hams are mobile? Oh heck, let's just say half (and that's

being generous). So there needs to be -two- hams for -4600- people; the base-bound ham handles 460 people while the mobile ham has to drive around looking for the other 4000+ potential victims of the disaster. Now.... are there at least 65,000 hams in the US that are both trained and capable to handle emergency communications for over 4000 people? Nope. I doubt there are -ANY- hams capable of handling that kind of traffic.

And historically, what do hams -really- do during a disaster? Some establish comm nets that are rarely used, while others take advantage of the opportunity to make "disaster-zone QSLs". That's about it.

In contrast: There are -way- more CB radios than ham radios; Most CB radios are mobile; Many CBers have more than one radio, and extra radios can be quickly installed in a vehicle; CB radio is a popular mode of communication with 4-wheelers, and 4x4's come in mighty handy in many types of emergencies; Most CB antennas are easy to spot even by non-CBers; CB radios are readily available to emergency services; CB radios are insanely easy to operate; etc, etc, etc. And believe it or not, CBers can and do organize quickly and behave appropriately during an emergency, a fact which has been proven many, many times.

But ham radio -does- have a place in emergency communications -- as a communications infrastructure backup for extreme situations such as a nuclear holocaust, a large asteroid impact, a super-volanic eruption, or some other calamity that may happen on a continental or planetary scale. Until that happens, hams will just have to learn to live with the fact that, since the early 70's, CB radio has played a much larger role in disaster communication than ham radio, and will continue to do so in the future.

>also, contrary to what you might believe, most of the phone systems aren't
>designed to have everyone in America on at the same time (which will most
>certainly be the case in a natural disaster or a man made one). regardless
>of the "codes" you speak of, if the system is busy, its busy and NOTHING
>you can do will get your call through any faster (and you'll just tie
>things up that much harder for someone with a real emergency anyway).

The point is moot; land lines are usually dead when the grid goes down.

>just because you don't like hams, doesn't give you the right to trash the
>services they offer, WITHOUT PAY and often at their own expense. can the
>same be said for the typical cb operator (without any formal training)? I
>say: NAY!

Have you ever heard of anyone trying to capitalize on a disaster by selling CB operator services? I haven't. Too bad the same can't be said for ham radio.

>besides, the last ham fest I was at (williams Az), there were a lot of young
>and old hams there and not many of them would even match your description.

Then you should have looked in a mirror. The point is that many hams carry an elitist attitude that is just as visible (and offensive) as dried cheese stains on a XXXL T-shirt stretched around a flatulating Republican.

>of course, we only have your words on what they appeared (at least to you).
>what the hey. you must need a white cane and dark glasses (you certainly
>sound blind to the truth to me).

How is your CW coming along, Eric?

Imperfect though it is, the ARRL is the only voice the ham hobby has these days. It would be a very poor idea to do away with the ARRL without having something better to replace it.

The ARRL does need to refocus it's efforts toward attracting newer younger members to the hobby if it is to survive long term. The hobby won't survive if its quasi-regulator continues to do treat amateur radio as though it operates in the heyday that was the 1950's.

1555. palomar TX-75 trouble

Newsgroup: rec.radio.cb
Date: 2005-07-11 19:59:07 UTC
From: Mike <nospam@nospam.com>
Message-ID: <fcAAe.6896$yC5.4604@tornado.ohiordc.rr.com>
Source record: 202492

personally, i never was really into CB, until I got this. Now i want to get into CB.

Anyway, my friend gave me a palomar TX-75 and schematic he had stashed in the closet. its missing the top cover, there is no internal physical damage, but he told me he didnt know if it works or not.

Ok, i powered the unit up, and the power led comes on. as soon as you key the mic, the RF out light goes on, the relay will toggle over, and the 100 watt lightbulb (lacking a dummy load). glows pretty darned bright. varies with the modulation.

the problem is, when I un-key the mic, the transmitter stays on! never shuts off. (its supposed to, to go into recieve). i unhooked the coax from the radio completely, and it still stays on, and lightbulb glows pretty bright, but not as bright.

some kind of self-oscillation is going on somewhere. hell, the input coax emits a boatload of rf. NOT SUPPOSED TO. but it does.

i turn the unit off, and back on, its fine again, until I key the mic.

Any ideas?

John

Soft drawn copper wire as used for house wiring will have a tendency
to stretch. Antenna made with copper should be done with hard drawn
copper wire or a good quality copper cladded steel. These wires will
have less tendency to stretch over time.

Also if using cladded steel, you will need to protect the copper from
oxidizing. Once salt and moisture pit the copper cladding and get to
the steel, then you will have rust and potential degradation of the
antenna performance.

Damn, and here I thought that the 20M band was at about half the frequency of the 10M band. Did those rascals at ARRL go and change that too? Where on the dial can I now find my 20M buddies, up in the old 5M band? I thought we'd lost that band way back in the 40's.

sDcOoNtTtS_PuAnMiMtE_69@yahoo.com (Scott in Baltimore) Actually, a lot
has to do with the population density of a given area. I suspect cb is
much more useful in sparsely populated areas as you will find few
repeaters and even fewer hams. Of course, everyone (myself included)
love to give opinions on what works based upon their local situation.
Human nature, I suspect ;)

>50 watts and a 5/8 wave antenna does real

tried a different radio. does not matter.

It will stay on showing RF, and putting out alot of RF without the radio
connected to it!

I guess you're getting anal about a 1:1 SWR?

Most mobile antennas have an SWR of about 1.5:1 when tuned properly.
Tune for maximum field strength, not lowest SWR. The two don't
always happen at the same place.

My CB antenna runs about 1.7:1. I talk anywhere I want to. I don't
even know what my 2 meter beam is at. It works just fine.

Shorter makes an antenna capacitive.
Longer makes an antenna inductive.

This length is frequency dependent.

May I suggest a trip to your local library to pick up some books on
RF/antenna theory? Try ARRL handbooks and others somewhere around 630.

1573. 476.425 - 477.400 MHz in North America?

Newsgroup: rec.radio.cb
Date: 2005-07-12 11:29:17 UTC
From: b_d_low@yahoo.com.au
Message-ID: <1121167757.655452.125710@g49g2000cwa.googlegroups.com>
Source record: 202409

Hi All,

I'm planning a holiday in North America in November+December, and amongst other things will expect to do a little light bush walking and cavorting around amusement parks (in CA, if it matters). I have a set of Australian UHF (476.425 - 477.400 MHz, 25 kHz channel spacing, FM, 5W (1W for my radios, 0.5W "lo range")) class-license CB radios that are great for keeping the family in touch in such situations, and would like to take them with me to use in the US.

I've looked around for the various frequency allocations, and whilst I have found that the rough equivalent device in the US (FRS) is on a lower range (462.5625-467.7125 MHz, max 0.5W (fcc.gov)), I can't find if the Aus radios would be smack in the middle of some restricted band or similar. The 'search' at http://wireless2.fcc.gov/UlsApp/UlsSearch/searchAdvanced.jsp was broken when I tried it...

Sooo, would I likely cause problems, or have problems, with a pair of 0.5W transceivers ~477Mhz in the US in general? In Disneyland specifically :-)?

Thanks in advance for any pointers...

Ben

Because wavelength changes with frequency. The higher the frequency, the shorter
the antenna needed.

Leave those radios home.In a densly populated area,like Disneyland,you will most like cause interference to other services.You ca stop at any discount department store and get a set of FRS radios for next to nothing,and just throw them away when you leave for home.

Well... self oscillation is a common problem without a simple solution. Could be as easy as an open cap... but if you have little experience in RF devices... I recommend you take to someone that does. Not a bash to you... just a hint from experience. Often times you need a scope to track that type of thing down.

Actually, as long as you have an antenna tuner, the antenna need not be resonant.

Years ago, the military used rhombic antennas for point to point HF long haul communications. The monsters on Guam were 600 feet on a leg (they were in a diamond shape) and 200 feet in the air. They were used on a large range of frequencies (one fixed size antenna) and simply had the reactance tuned out to present a good load for the transmitter. These things had gains that would put most Yagis to shame.

That said, most of us use tuned antennas and then feed the things with 50 ohm coax and we don't need antenna tuners. 1.5 to 1 or below is excellent. 2 to 1 is about the highest you want to see without adjusting the antenna to bring it closer to resonance (if, indeed, that is the problem - a vertical over salt water will show around 36 ohms impedance when it is exactly resonant, rather than the nominal 50 ohms). Surrounding metal, imperfect grounds, and other problems can cause the antenna impedance to be above/below 50 ohms and exhibit some SWR. As long as your 1.5 or below, you're fine!

73 from Rochester, NY
Jim

Antennas have so many facets, I could not even begin to dive in
and give you a simple start, that's why I suggested a trip to
the library, or a Google session. Start absorbing data and you'll
start to understand it in a while.

Doubtful. Have you been taking trouble-guessing classes from Dave
Hall?

> but if you have little experience in
>RF devices... I recommend you take to someone that does. Not a bash to
>you... just a hint from experience. Often times you need a scope to
>track that type of thing down.

The first clue is in his description of the problem: "....as soon as
you key the mic, the RF out light goes on...." meaning it's not in SSB
mode -- important. Then, "....the relay will toggle over, and the 100
watt lightbulb (lacking a dummy load). glows pretty darned bright.
varies with the modulation." Bad indication when running AM. The light
should be steady unless the exciter has some serious swang. Probable
cause is an unbalanced push-pull amp; i.e, bad pill or toasted bias
resistor. This condition would easily send RF back to the input and
keep the relay keyed.

Another possibility is a stray wire or solder blob on the connections
to the T/R relay (#1). Or feedback within the relay (as I tried to
tell you several times before -- use SEPERATE relays for input and
output to prevent possible feedback!). If all else fails, test the
components in the relay driver circuit. It's easier to test by
bypassing the driver circuit completely and keying the amp manually.

Try this site. A bit technical but absorb it. Be sure to look at the
Antenna Basics
page too. Tuning is a challenge that anyone with a bit of practice can
do.

>If a longer antenna is better then why do they sometimes have to be cut
>shorter when tuning?

Because a longer antenna isn't necessarily better. When you hear that
a longer antenna is better it's usually a comparison between lengths
of loaded and unloaded antennas of the same -electrical- length. An
unloaded CB antenna is 9', it's the longest 1/4-wave you can get, and
it's also the most efficent. Shorter antennas (firestiks, wilsons,
etc) are still a 1/4-wave long -electrically- but are less efficient
because they are shorter -physically-.

You tune your antenna to get it into a zone where it's most efficient,
where it's as close to a 1/4-wave as possible. That 'zone' is actually
pretty wide, and a 2:1 or better SWR across the band is a good
indication that you are in that zone; i.e, your antenna is tuned. If
you want a more efficient antenna then get one with the same
-electrical- length and a greater -physical- length.

Just got in a 150GTL.
Whole new circuit design using Mitsubishi Mosfet 16watt finals.
Looks like a well built unit....fit and finish are good...controls feel
tight.
Trying to get schemos from Cobra might be a bitch though....but am trying.
The freq expansion mod paperwork I got with the radio shows removing
R-something..something...crappy copy...but it does point to a resistor next
to the
synth chip...but haven't tried the removal yet...
Anybody got one up and going yet..?

Well, other than reading their website or using their books to pass an exam, I
know little about them. But it seems they run the show, and are very powerful.
Sometimes, they are better off having 2 of these type organizations. But one is
better than none.

I doubt that the ARRL will piss off the folks that it reaches out to.
Sadly it will probably continue to bore those potential new members.
The ARRL may (and should) piss off the complacent members who cling to
the idea that out of date license tests should continue to be required
because the old-timers had to take them.

Well that's not unusual. Sure it was their mistake, but if they sent
another one, what would keep you from not sending back the wrong radio? Did
they offer to charge you for the correct one, free shipping, then refund
your card upon return of the wring radio?

>>Now I shipped back the m1, they have had it for more than a week,
> and they wont issue a credit.

Not to say they have, but it's the old saying "their quick to take the
money, but slow to return it" Credit card co. are notorious for that.
Also, remember, once returned, it has to through receiving, then onto
who ever does the returns, so that in itself could take a couple of days.

>>When I call them on the phone they lie and make up BS stories.
>>This Place H&Y Electronic Supply is a terrible outfit. I wouldn't
>>reccomend them to my worst enemy.

Well, if you did use a credit card, you can always file a dispute with
the Credit card co. That will cure the problem.

Message-ID: <GpaBe.18423$zY4.14320@tornado.ohiordc.rr.com>
Source record: 202509

I did pull all the resistors out of circuit, and they all checked within tolerance, except for one hangin off of the base of one of the outputs. replaced that, and still no difference, except the varation in the intensity of the bulb stopped.

im going to have to scope it, but i dont want the RF output to damage the scope, and its only 10mhz.

but, it only happens when you key it down once. thats it. if you just power it up without keying it, its fine. until you key it.

If you toggle between SSB or AM on the linear, it doesnt matter. still does the same.

there is a single transistor rf detector stage that toggles the relay off and on. all the parts in that circuit test fine. The only thing I can figure out, is since there is a ton of RF on the input and output when this even happens, the input rf is keeping the transistor turned on, thereby keeping the relay on. Unless something is breaking down under load conditions. Im kind of stuck here. Ive done plenty of RF work, and RF amplifier building before, until I ran into this problem.

never had a 3-30mhz linear before. Thats why I kind of sound noobish.

I built FM transmitters, and amplifiers with chebychev(bad spelling) low pass filters before, without problems. ive also done RF work with broken CBs and FRS radios.

never worked with CB linears before.

wrote:

>+<If a longer antenna is better then why do they sometimes have to be cut
>+<shorter when tuning?
****

First off there is physical length and then there is electrtical
length. The two can be the same or they can be different.

Electrical length is the length that at some frequency the antenna is
self resonant. This is found for a half wave antenna by the following
formula

(299.8 meters / frequency in MHz.)/2 = resonant length of a half wave
antenna.

Other things can affect tuning of the antenna like nearby buildings,
how close the antenna is to the Earth, and many other variables. These
variables will alter the above formula from as little as 2% to as much
as 10%.

There are techniques that can actually shorten the physical length
while maintaining proper electrical length. One method is linear
loading of an antenna. Another is to introduce some reactance to alter
the physcal length while maintaining proper electrtical length. This
reactance is often in the form of a coil. This coil can be located
pretty much anywhere in the antenna. Coils are generally not
reccommended at the far ends of the antenna from the feed point.

Ideally one should have an antenna that has the physical and
electrical length the same. This is not always possible but the most
desirable. Reactances in the antenna alter radiation patterns off the
antenna and in most cases reducing overall efficiency of the antenna.

Antennas can be somewhat simple to very complex.

A good refereence book to pick up would be the ARRL Antenna Handbook.
There are many out there that range from introductory to very
technical.

To:

The best amplifier offered to people out here was the Skywave by Brian
Griffey! I haven't seen or heard from him in years. I bought one of
his
amps and it is WONDERFUL! Even my tech, Justin from FG Best
Communications, says it is a well made and engineered amp! It has
worked
flawlessly since day 1!

It used a pair of 2879 and was conservativly rated for 180 watts RMS
(pep
is much higher).

If Brian ever comes back, snatch one up!

Master Chief

Today only (7/13/05)

I have a Turner Mobile mic for sale. Model M+2/U. Takes (and needs) a 7 volt battery. Seems to be in fairly decent shape. $12.50

Have also what may be one or perhaps two CB "Receive" pre-amps. This gizmo was made by Antenna Specialists. The one unit looks tunable. $7.50

A Cobra Power Mic - New, but plug was changed for a "proposed" buyer. $12.50

Stock mics for Cobra, Realistic, maybe a couple others. Some new, some pulls. $2 each

2 way radio mics - I have brands such as Uniden, Motorola, GE. .50 each.

Older Realistic SSB set, AM works, SSB not tested. $12

Cobra 139XLR 40 channel AM/SSB Base - came from an elderly lady's home, kept in good shape. Not bench tested - yet - but no reason to suspect a problem. $40

2 - D104 Lollipop mics in decent condition, came from same place as the Cobra 139XLR. Should be ok, but not tested. $40 each

ALL items new or otherwise WILL be sold AS IS. Pictures can be provided on request.

Shipping is extra. Payment via Pay Pal OR Postal MO only. Shipped next shipping day of payment received.

1647. FREE! "THE CB EPROM DATA BOOK" OF FREQ. MODS

Newsgroup: rec.radio.cb
Date: 2005-07-14 03:10:33 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <7tlbd11k3oq2u7ptjpdb5rbas8508l8ns1@4ax.com>
Source record: 202534

FREE!!

For advanced techs and serious radio hobbyists, we're now offering a FREE copy of our previously published "CB EPROM DATA BOOK" by Martin Pickering. (EPROM = Erasable Programmable Read Only Memory.) We sold it for many years but it's now out of print. This little manual of 60 illustrated pages is an absolute GEM of CB technical knowledge you'll just never find anywhere else. And it's yours for FREE from our Web site.

This book reveals the secrets of advanced channel programming, and picks up where our "CB PLL DATA BOOK" (www.cbcintl.com/pllbook.htm) leaves off. You'll get a thorough background in how these amazing programmable chips can be used to modify many popular CB PLL circuits for expanded frequency coverage. Covers the basic programming techniques, and even includes real PC board artwork for making EPROM circuits. Sample artwork includes EPROM boards for the popular MB8719, PLL02A, ï¿½PD2824, and ï¿½PD858 PLL circuits.

Best of all, the price is right--namely, FREE! Download your FREE copy of "THE CB EPROM DATA BOOK" (948 KB Adobe PDF) at:

www.cbcintl.com/docs/EpromBook.htm

Don't forget to check out all our other CB specialty books, plans, kits, & high-performance accessories at:

www.cbcintl.com

SAVE MONEY! We regularly run EBAY auctions in which you can save up to HALF the cost of our most popular CB books and accessories. To see what's currently on sale, double-click the line below:

The entire situation sounds like a self oscillation (you have a feedback
loop in there somewhere). the rf detection circuit may also bee too
sensitive (who knows?). I haven't worked on anything like that in years.

Well, it's not China, anyway. I would stay the hell away from them until they work the kinks out. I find that 150 to be useless. It has no SSB, and power is much lower. I would wait for the 200.

Nothing that I am aware of. With the exception of Cobra taking a stab at 10
meters that can be converted. Google the Cobra 150 and 200.

Pete is right... but not all hyper-abrupt varactor diodes are the same.
You need to review the specs to find the capacitance range you want at
a given voltage.

I have a FAR BETTER idea for both of you.

Why don't you guys start a pissing-contest on 14.313 mHz ?

I mean, remember when KV4FZ and his group would occupy
that frequency in years gone past?

BOY WAS THAT FUN LISTENING! It was almost better than the
Comedy Channel listening to these senile old fartknockers
beat each other up with their walkers and canes and false
teeth on the air.

Just think of it! If you two and all your friends started to
camp out on 313 and trade barbs over the air LIVE you would
have 80% of the ham population listening to "The Show" in
no time, and you two guys would become so famous that
you'd be asked to give out AUTOGRAPHED QSL CARDS
at all the hamfests, give speeches, write for QST etc..etc..

Whatcha waiting for? It's a WIN-WIN fer sure!

Ugh. I am not big on 2 meters. I think the only reason is because they can carry small handhelds. I was on 2M/440 split repeater this March, and there wasn't a peep here. The CB has many more people on it.

The only solution to that is to get The Congress to pass the bill
that has been introduced three times to assert Federal jurisdiction
and get the problem solved (I deal with CC&R cases professionally).
The Congress stonewalls it every time. Few if any states even want
to touch it.

What do YOU suggest?

I don't know. I am fairly independent when coming to politics. I owe no loyalty
to any party. But the way this guy can get away with this is amazing. And
everytime he is in the tank, he ad agency brings out all those 9-11 references
with Iraq again. I can believe many people in this country still buy that.

There's nothing I can or will do about that. My pocket
is wearing damn thin, however. Bush doesn't give a damn
about us little peons.

Did you hear Google gave a lot of money to the BPL cause?
Bush likes BPL. It will be nothing but trouble for all
radio users. You think CB is noisy now? Wait until there
is S9 noise from DC to 80 Mhz. Enjoy it while you can.

There are articles (horror stories) on the www.arrl.org website.
BPL has been banned in every other country that conducted tests.
This bassackwards country still wants to go forward with this BS.

Thanks, Bush! You and your fucking appointees haven't a clue.
All he cares about is his daddy's war. Can we survive another
2 and a half years???????????????

His plan is to appoint himself president, FUGGLY renter as vice president, and bust John Walker Lindh out of prison to make him our ambassador to AlQuaeda...that Scottioekins is one bright SOB. No wonder his supporters are rallying around him.

You forgot one detail...send Bill Clinton and Hitlary to Iraq as good will ambassadors to the jihadists. Maybe they could give 'em a nuclear reactor, like Billyboy did to North Korea.

While you are at it, send Sandy Berger along too...with his gifted insight maybe he can get some more of our troops killed doing stupid crap like Somalia. If nothing else you could send all 3 of em in a Hummer with a big bullseye painted on it. That would give the scumbags some fellow scumbags to kill.

You could call this a humanitarian mission...afterall, if the jihadists nail 'em you can spin the positive benefits for Chelsea as your original intent.

We anxiously await further details of the proposed Scottiekins/FUGGLY renter administration. Does your fellow taxidermist mopathetic side with you on this stuff as well?

You're my psychotic hero, dogie.. :D

http://sj.blacksteel.com/padded-cell/Posey03.jpg

----- January 6, 2003

Toledo Amateur Radio Club
7234 Latcha Road
Perrysburg, OH 43551
Attn: Trustee John C. Lagger, AA8XS

RE: Warning Notice--Amateur Repeater W8RZM

Dear Mr. Lagger:

Our records indicate that you are the trustee for the above repeater system. Enclosed are recordings of violations on the repeater by N8WWM. The transmissions continued for a considerable time and there was no evidence of a control operator.

Since you are the trustee for the repeater, it is important for you to understand that you are responsible for its proper operation. The decision to operate a repeater is a totally voluntarily one. Repeaters are a convenience in the Amateur Radio Service, not a necessity. A repeater is a station just like any other station; and under Section 97.205 of the Commission's rules, all stations must have a licensee and control operator. Under Sections 97.103(a) and 97.105, control operators must ensure the immediate proper operation of a station, regardless of

the type of station control. Furthermore, "automatic" control does not mean "unattended" operation. Unattended operation is not authorized under the rules.

The repeater licensee/trustee is responsible for all recurring violations and violations that are not inadvertent, just as a licensee is responsible for a base station HF station operation in the licensee's home. You must prevent recurring and deliberate violations on the repeater by locking rule violators out, using tones, warning users, limiting its operation, or taking whatever steps necessary commensurate with your responsibility as the licensee of the station. If you are unable to do so, then you must shut down your station.

If you are unwilling or unable to prevent violations on the W8RZM repeater, then your operator and station license will be subject to enforcement action by the Commission. Such action may include monetary forfeiture, operator license suspension or station license revocation.

> Attn: Trustee John C. Lagger, AA8XS
>
> RE: Warning Notice--Amateur Repeater W8RZM
>
> Dear Mr. Lagger:
>
> Our records indicate that you are the trustee for the above repeater
> system. Enclosed are recordings of violations on the repeater by N8WWM.
> The transmissions continued for a considerable time and there was no
> evidence of a control operator.
>
> Since you are the trustee for the repeater, it is important for you to
> understand that you are responsible for its proper operation. The
> decision to operate a repeater is a totally voluntarily one. Repeaters
> are a convenience in the Amateur Radio Service, not a necessity. A

> repeater is a station just like any other station; and under Section
> 97.205 of the Commission's rules, all stations must have a licensee and
> control operator. Under Sections 97.103(a) and 97.105, control operators
> must ensure the immediate proper operation of a station, regardless of
> the type of station control. Furthermore, "automatic" control does not
> mean "unattended" operation. Unattended operation is not authorized
> under the rules.
>
> The repeater licensee/trustee is responsible for all recurring
> violations and violations that are not inadvertent, just as a licensee
> is responsible for a base station HF station operation in the licensee's
> home. You must prevent recurring and deliberate violations on the
> repeater by locking rule violators out, using tones, warning users,
> limiting its operation, or taking whatever steps necessary commensurate
> with your responsibility as the licensee of the station. If you are
> unable to do so, then you must shut down your station.
>
> If you are unwilling or unable to prevent violations on the W8RZM
> repeater, then your operator and station license will be subject to
> enforcement action by the Commission. Such action may include monetary
> forfeiture, operator license suspension or station license revocation.
>

And this N8WWM gem:

We KNEW she couldn't stop expressing her lust for the AKC...mopathetic is our trained puppet...Guess ole trainpuppet the trained puppet will have to give mopathetic the crown now. Thanx, mopathetic, there was a side bet on how many days it would take to make you yap like the good little taxidermist you are.

Score another one for the controllers of mopathetic, his Lords and masters, the AKC.

Life is good when your wrist doesn't flip at the Girard Petro, like mopathetic's do.

Pooooow mopathetic...she can't take it....she cwied to her mommy and she gave her the keyboard again, lol. What fun it is to see her jump on command like that.

Come on mopathetic....we have a bet based on all your previous posts about just how long it takes you to make threats again...It is a pool type thing with everyone picking a number of hours or days for 10 cents each. Get busy again with the threats, taxidermist.

You may now take your thorazine and sit yer azz down. We will call you to the blackboard again soon, though.

>So don't you really mean Clinton fails again?

Hehe...First off, you claim the article is a crock, then utilize it to attempt a view point. You ought check out your logic.
Secondly, Bush was made aware of the suitcase nukes that were smuggled in under -his- reign, not Clintons, but once again, one can always tell the level of damage to the Bush admin by the invocations of poor obfuscative techniques..Clinton, Kerry, etc. In fact, losers like you prefer to argue history instead of focusing on the current problems.

I am assuming that this affects all communications, including cell, police, fire, etc. I can't see how is affects ham, and nothing else. I don't see this taking off.

Seriously, if they wanted competition, they could have opened the cable lines up to anyone, but the US supreme court knocked that down. That court has a bunch of dumbasses.

I'm not sure which all -HF- bands it plugs, but I'm sure someone here can
fill us in on that part. iirc, vhf isn't bothered so much with it, but I
could be wrong about that.

It's bad for 11 meters from what I've heard about it.

They were testing it in Manassas Virginia with bad results last I heard. I stopped following it figuring it was a moot point after that, but it's going to come down to the $$$ for bandwidth in the long run. RF radio will just have to get over it...this from the same government that tells me not to run an amp on 11 meters. Hard to follow some of that logic.

Actually we have finally stop having cheap gas. If you take in
account for inflation, gas today at $2.50 a gallon is no more a
percentage of you fuel cost from 1975.

The real crunch will come in when gas hits upwards towards $5 a
gallon.

Thank you James for the truth. It's $5 a gallon or more most everyplace already, except for the states.

These people blaming Bush for the fuel prices shouldn't be too surprised when the real war starts over the oil. That's really all this crazy shit is about.

I should have been an oil cowboy.

BPL is but a stop gap means to the ultimate end where fiber will be
strung to every residence.

Broadband over power lines will never be a viable media for data and
other broadband services. In ten to twenty years we will look back at
this and wonder why any one would have ever suggested such a means of
transmitting data. It will be obsolete before they even really begin
to roll out the service. Verizon has already started laying fiber in
dozens of their markets and will make BPL a footnote in history.

They have been experimenting with BPL for over 5 yrs and have not been
able to effectively implement it anywhere in the world. It is a pipe
dream that will never really get off the ground.

What's the biggest stumbling block besides RFI? It was designed to provide
people out in the sticks that hadn't been cabled up yet a broadband option
via their electric line.

Everything I drive is a gas hog. My wifes car is the most efficient in the
fleet. Most everything I drive are work trucks tho, so that skews the
numbers a bit..my Plymouth don't count against that one bit either.

A I recall some 6 years the FCC at least tired to say it had the power
to not renew a licensefor kinda related fcrimal convictions don't
remmeber all the details

OTOH Bill Clinton dispite all the cost in impeachement etc is still
elible for a license

I don't have a problem with people that buy pickups, trucks, or SUV, for work or their intended recreational use. But these women that need them for general housework, or simple work commute, are a big problem. My wife had a ford pickup before we got married. WTF? Exactly why did you have this truck? The bed didn't have a scratch on it. To add insult to injury, the fucker's tranny dropped 210 miles passed the warranty, just about 3 months before the lease was up. That cost me $2,300.

-----BEGIN PGP SIGNED MESSAGE-----

What is wrong with this amp:
1) Too small wattage for too much money.
2) Too small of heat sink for dissapation of heat from transistors.
3) No fan on heat sink to dump the heat.
4) No "key-down"/"key-up" (ratio) listed.
5) Probably burn up under summer temps with continous use.
6) Real CB Junk!!!

Only junk amps have 50% key down ratings, actually a person should not settle for less than
100% key down rating (amp has 100% on time). And, certain a 75% keydown time (7.5 minutes
out of every 10 minutes) should be considered a minimum rating!

Supposedly however it's never monitored. Recall during the peak of CB Radio many local Police Departments would regularly monitor channel 9. I was a member of Central Jersey REACT back in the early-mid seventies which had almost one-hundred members everyone taking shifts to assure there was 24 hour day coverage.

Nor teh Dodge Ram SRT 500 Hp pickup truck to go back and forth to
work. 8 mpg city and 9 mpg hiway. Or maybe the H2 Hummers. They get
real lousy gas milage. There is plenty of instances one can point out.

Bandwidth. Compared to fiber, using power lines to transmit data over
is like usign tin cans and string.

On fiber upwards to 2000 Angstroms or 20,000,000 MHz bandwidth. As for
power lines I do not believe some of the bandwidth numbers I heard
years ago. Personaly I don't see powerlines supplying bandwidth much
more than what twisted pair can for telephones. That is in the range
of 20MHz.

Not true. Intermittent Communication Service (ICS) is 50% duty cycle.
If you are transmitting more than 50% of the time while on the CB band
you are up to no good.

This amp is rated at 50%, and it is not junk.

A regulated bias supply is a sign of someone who is trying to build
an above average amp. Most CB amps just put the transistor base a
zero bias, and then let the amp sound terrible on sideband. The rest
use diode clamps for AB1.
It would be nice to see the schematic for those for us teaching our
selves electronics, not to mention any servicing if any that might pop
up at some future moment.

Well, there you have it.

Say someone sits on the mic and keys the transmitter, or it gets stuck down in the seat leaving the transmitter keyed on. Maybe 15-20 minutes, or so, later the amp is toast, especially if the temps inside the car are high (summer time.)

These junk amps like this are just a waste of money.

From: Professor <briangriffey@sbcglobal.net>
Message-ID: <1121605257.484868.194380@g14g2000cwa.googlegroups.com>
Source record: 202689

But it does matter... it matters that you are nothing but a coward with a filthy mouth. Anyone who won't give their real name (like you) and persists in attempting to annoy people on this NG is accomplishing nothing and are well aware that they are not conducting themself in a reasonable manner. And the fact that you say that this behavior is "fun to do" only reaffirms my suspicions that you have a mind of a ten year old. Shame on you. Go ahead and waste your life doing these things... see if we care.

Professor

Perhaps the advertisement should read; "A certain amount of intelligence is required on the part of the operator to insure reliable communications service".

How to avoid the following...

1) ">Say someone sits on the mic and keys the transmitter, or it gets stuck down in the seat leaving the transmitter keyed on. "

Answer; User a mic clip. Mount it to the side of the radio. Put the mic in the mic clip when you are done talking.

So did you design that amp? I about ready to design my own homebrew
amp. Did you use computer software to map out the circuit traces for
the printed circuit board, and if so what software did you use?

Dream on, twitlips. As for holding his head high, you only said that
because you hold yours low to look at men in a lewd way, and don't want
him getting any of the truckstop action you and FUGGLY do all the time.

Post public records, insult all you can, say anything that comes to your excrement addled minds...whoopie. Get ready to do it some more, cuz when professor goes down you won't have anything else to say about it BUT that. That's what's so funny about this whole thing. You are totally without recourse to stopping the AKC.

You clowns are like one of those rubber mounted fish that blab when you push a button. The fun part is AKC pushes the buttons around this here NG.

twitlips...thank you for popping up with your wrist flipping self. Anything you post is given proper regard...we laugh. All the side bets about who is gonna pop off next are a lotta fun, so as long as we are here and in control of you we might as well do it.

and you still couldn't make a pimple on W's hiney, you sawed off FUGGLY renter.

http://acc.ohio.gov/dhearing.html
http://acc.ohio.gov/bdmn0401.html
FORMAL DISCIPLINARY HEARING-KATHLEEN R. LEE
Chairman Woods noted that Kathleen Lee was issued CPA certificate 36,525 on July 15, 1998. The hearing was to consider disciplinary action against Ms. Lee's CPA certificate pursuant to Ohio Revised Code section 4701.16(A)(5), conviction of a felony under the laws of any state or of the United States. Ms. Lee was convicted in the United States District Court, Northern District of Ohio of five counts of Aiding & Assisting in Filing False Tax Returns, a violation of 26 USC 7206(2), on June 12, 2000. Ms. Lee did not appear at the hearing. The Board agreed to deliberate the disciplinary action in a later executive session.
Action taken.
Kathleen R. Lee, CPA 4701.16(A)(5)-Convicted of aiding & assisting in filing of false tax returns. CPA certificate revoked.

I've been looking at the design of several amps, and all amps are
definitely not created equal. The regulated bias supply is seldom
seen in the CB amp world.
I picked up a Palomar Elite 300 for study. It turned out to be a
study in what not to do.

Here is what I found so far;

1) The amp is zero bias. Sounds like Darth Vader with added distortion
on sideband.

Ok. I fixed that with a diode clamp. At least mine is in AB1 now.

2) The low and medium power setting is achieved by sending some of
the RF to ground via a single resistor. The input SWR goes through
the roof.

Ok. I replaced that with a 50 ohm impedance resistive t-pad.

3) The SWR delay is on all the time, and sometimes people responding
to my transmit get chopped off in my receive before the amp's relay
can un-key.

Ok. I put the delay capacitor for the relay on a switch.

4) Here is the weird one. The SWR without the amp on is 1.1, but
when I turn the amp on the SWR goes to 3.x:1 or higher, and I'm
talking about the SWR displayed on a meter AFTER the amp. Not the SWR
on the input side of the amp.

Hmm. This one stumped me, but some other smart fellows suggested the
amp has parasitic oscillations and the frequency (or frequencies) of
the oscillation(s) are outside the bandwidth of the antenna. I can
take another amp with two 3-500z tubes, and put it on the same antenna
with no substantial increase in SWR from the antenna. The Palomar
Elite 300 is only good for about 100 watts. The two 3-500s are good
for 1300 watts. The antenna is rated at 5000 watts.

I'm still working on the fix for this one. Tuned input and output circuits would probably fix it, but there is not alot of space inside the amp to work with.

5) The RF from the output transformer is not filtered from the DC input to the collector on the finals.

Ok, I put an RF choke on the DC power cables to keep the RF from running up the DC cables and tripping out my pwer supply.

back to thread view. My number of messages to read is reduced to 1/3.

1835. THIS IS MY BEEF!! For Da Helluvit!

Newsgroup: rec.radio.cb
Date: 2005-07-17 18:42:55 UTC
From: Anonymous CBer <anon@anon.com>
Message-ID: <42daa679_3@newspeer2.tds.net>
Source record: 202718

Item 1:
How can anyone talk local anymore with these damned linears tearing up channels above and below my home channel with yelling and constant yapping about useless crap, especially repeating themselves 3 or 4 times calling another station somewhere beyond the legal range according to FCC Regulations!

The F.C.C. Does Not Exist!

It is operated by Linear operator sympathizers within the FCC that warn their "friends" by personal phone about a possible "visit". And these "friends" notify their friends and alert them to turn off all linears until all is clear!

The FCC is unable to find the interference and quits making visits and passes them off as "crybabies wanting attention from the FCC to bust somebody!"

If the FCC would conduct an unscheduled audit of their employees then they would find the leak! And have that person fired!

Item 2:
Channel 9 needs to be just another CB channel since Hwy patrol cars across the WHOLE U.S.A. no longer carry them or have had them removed for good, since everyone uses cell phones to report an incident!

Either Use channel 9 as an emergency or just let it fall to the side since police departments despise them as useless compared to cell phones.

Why?

Well, someone may have made a prank report on the cb,
well damn, pranks can be made by landline or cell phone!

GEEZ!

Wake UP!

Item 3:
39 other channels so, why stay on one channel and tie it up with useless issues that don't amount to jack shit! At the same time someone is unable to hear their neighbor because a "Crybaby" of a trucker wannabe is on the channel with their "Goodbuddy" cryin' cause they gotta take a load to this place and they don't like goin there!

Turn in yer damn CDL and let someone else drive that is really looking for a trucking career and you can go work at walmart everyday of your life or live on the streets or sit at home on your ass! You supposed to a professional

truck driver! Instead you've made yourself a professional crybaby! You've done that with every other job!

Be LUCKY you gotta damn job - look at all these people with NO jobs! No home, NO nothing!!

And here you is being a Crybaby cause you gotta go take a load from point A to Point B and you don't like going there because what.... you just don't like the weather or the women or the men working there or the dogs, cats, traffic, kids, the atmosphere the 4-wheelers that get in front of you, or your goodbuddy didn't want to sleep in your bed!

Get Over Dat Shit!
you's gonna have that, regardless!
"Different Strokes For Different Folks!"

And keep yo eyes and yo mind on the driving and the road --- not on that chick in the car next to you!
That "chick" might have dick! But it don't matter to you just as long as you get a look at the breasts and the ass, you could care less about what's between those silky smooth legs!

maybe if you saw that -- you would keep your eyes and yo mind on the driving and the road for good!

Item 4:
Shootin Skip on 19 is the most dumbest thing one can ever do!
first of all you ain't gonna talk to nobody special so shut up!
And the person claimin to be in Iowa may just be someone down the street making you think you shootin skip!
So, Shut da hell UP and get off our road channel, dumbass!

Fine if the resistors are non-inductive and can handle the power
dissipation.

>Ok. I put the delay capacitor for the relay on a switch.

Assuming you meant SSB delay, ok. A better way is to modify the radio
to superimpose a high-Z DC on the output when keyed (in AM -and- SSB),
then rig the amp relays to switch on that DC signal.

The reason for this problem is obvious -- the output impedance of the
amp is not even close to 50 ohms. It's that simple.

A warning about chokes -- almost all of them are self-resonant at some
frequency; and with stray capacitance in the circuit (including the
power leads) they can set up resonance on even more frequencies.

I finally found my wattmeter/SWR meter

Im pushin 200watts near. about 150 to 180watts. close to it.

There is so much RF on the input, it shuts the CB down. If the CB is on/keyed, or off, the power output needle doesnt move period. HMM.

The collector had no connection of any kind back to the B+. It only
had a ferrite bead going to ground. It was entirely up to in the rf
input signal from the radio to turn on the transistor.

Just in case you were right, I tried changing the number of windings
on the broad band output transformer, but it still did not get rid of
the SWR after the amp. There were some number windings that the meter
showed more output on than others, but the reflected power back from

the antenna varied proportionally with it. I think the other guys are
right in suggestion the amp is generating frequencies outside of the
bandwidth of the antenna, and those out of band frequencies are
generating the reflected power back from the antenna.
An SWR meter hooked up after the amp should be measuring the
reflected power back from the antenna verses the forward RF coming
from the amp. I don't see how the amp could cause reflected power
back from the antenna due to an impedance mismatch inside the amp when
the SWR meter is hooked up between the amp and the antenna. The coax
is 50 ohms even of the amp is not, and the reflected power back from
the antenna is caused by an impedance mismatch between the coax and
the antenna.
If you can logicaly explain how an impedance mismatch in the amp can
cause reflected power back form the antenna I am more than willing to
listen. On the truth with fix this amp, but I really don't see how an
impedance mismatch before the SWR meter can cause reflected power back
from the antenna.

I'm sorry. I made a mistake. The above should have read;

The base had no connection of any kind back to the B+. It only
had a ferrite bead going to ground. It was entirely up to in the rf
input signal from the radio to turn on the transistor.

Yes... severe oscillation can damage the amp as well as the CB... use caution when doing your troubleshooting. You might want to isolate your radio with an attenuation pad... and limit the current to the amp to avoid overheating the output devices.

Have to agree here but I am biased as I work for a major supplier of
FFTP. Seeing the amount of bandwidth coming through my building it would
be foolish to think copper or for that matter sattelite can be faster
than light. btw, 20,000,000 Mhz/second how does that relate to bits/second?

fixed it.

This whole time, the two commons of the relay where so close, I thought they were connected.

well, that feeds the output right back into the input directly. DOHHHH.

i just pulled them apart, and it worked fine. Its hard to see, because its hidden behind a bundle of wires.

Anyway, it went from 200watts PEP, to 30W PEP

the amp is working now, the needle moves a little bit with the modulation, which is to be expected.

But, im only getting 30Wpep, its rated for 120W PEP.

hmm.

>showed more output on than others, but the reflected power back from
>the antenna varied proportionally with it.

You are forgetting that impedance = resistance + reactance. Your
transformer may have the right number of turns, but the collectors of
the transistors are very reactive and that reactance is reflected to
the amp's output through your transformer. You need to cancel out that
reactance. That's why SS amps have a large capacitance on the output
end of the transformer (no, those caps aren't there to make a tuned
output tank).

> I think the other guys are
>right in suggestion the amp is generating frequencies outside of the

If the amp was oscillating you would have probably smoked your
transistors by now.

>impedance mismatch before the SWR meter can cause reflected power back
>from the antenna.

Forget the coax for a moment: If your forward power is highly reactive
(as I suspect) and it's feeding an essentially non-reactive load, the
result is an impedance mismatch, and therefore you will have reflected
power. What you do is hook your amp to the directional coupler and a
non-reactive dummy load (using SHORT cables), then adjust the amp's
output capacitance (as stated earlier) for a 1:1 SWR.

Well... nothing wrong with this if it's sold as a prototype. The problem is that many are pawning these off as production units. That's not very smart for this type of RF device. Between the variation of components... mixed with the variation of physical assembly of those components (because of no real PCB) you can get all types of performance and instability issues.

Hello, Twist

Ah, another liberal newsgroup spreading lies ;)

I'm getting tired of hearing about that from the fanatic right. Sooner or
later *all* of us are going to have to face facts. I chuckle when I hear
about the Democrats "tax and spend" policy. It beats the "spend and spend
more" policy of the current administration. We had a balanced budget under
Clinton. Our national debt is now something like $100,000.00 for every man,
woman, and child in this nation.

Nice thought you have, however; get news from Canada, Australia, or Great
Britain. Everything around here seems to be contaminated. I'm wondering
how they are going to get the genie back in the bottle over revealing
agents' identities ... could be a bumpy ride.

73 from Rochester, NY
Jim

I'm guessing everybody is blind or something... Top of the picture, there's
a box that tells you what the radio is... Have a look...

Oh, and would someone care to point out exactly what the modifications
consist of? Based on other images from the net for the same unit, it looks
stock to me, except for the mike...

>leaks are how washington work

Perhaps so, but the problem is a corrupt president who on multiple occasion swore up and down bloody hell that "-whoever- was responsible" would be fired. Now that it was found to be someone in the Bush administartion, he wants to "wait for all the facts" (he certainly didn't wait for all the facts when he lied to the nation and said the cuplrit would be fired). In addition to Bush lying to the country, he has taken the administration and lowered the ethics bar. Of his administration, Bush told the country (another lie) his administration would bring "honesty and integrity" and "would avoid legalisms".
And people like you continue to buy it and bitch about anyone who dares oppose the lying, failing president. In fact, it's people like you who idly whistle Dixie when Bush is found to be lying or corrupt with a bristle of: "Yes, but (insert any other topic as obfuscation here) and that is just how Washington works".

>gulf war around 26.3 mhz.

I haven't tagged the mideast this time around with the freeband. I did
get some very interesting contacts during the last few military
skirmishes, though, under BC's reign.
IMO, the communications out of the mideast are much more interesting
right now than trying to talk there on the freeband. My AR is yielding
some really wild shit from over there on some frequencies which are not
publicized or really recognized for anything, anywhere. I checked some
other SWL groups and haven't seen anyone mention anything like I have
been hearing, so until then, I'm just gonna copy the mail. One of the
strangest things I have been hearing is something that sounds like a
classroom full of kids being taught anti-western beliefs. Sounds like
someone just placed a mic somewhere in the classroom. The broadcast
comes and fades out within 15 minutes every time. Has the skip to Iraq
been running?

I love how the loony left is screaming for Roves head about "outting" a spy.
But in an Amicus brief filed by just about every media outlet during the
trials of Cooper and Miller, they claimed that a crime was not committed due
to the fact that Plame was outted years before by the Russians and brought
back to the US for safety. The desperation of the left is simply amazing.
Also funny there was ZERO outrage over Sandy Berger putting classified docs
in his pants.

No wonder this guy is a mess.
http://en.wikipedia.org/wiki/Karl_Rove

>I love how the loony left is screaming for

>Roves head about "outting" a spy.

Of course you do. It helps take the focus off of the Bush failures in Iraq. But, if you would for a moment, forget about any party and merely take Bush' statements about what he would do if anyone in his own party was the culrpit in this specific incident. It has nothing to do with any "loony left" or any liberals, as much as sheple like yourself -need- it to be. It simply has everything to do with Bush lies and not keeping his word and compromising the entire "honesty and integrity" he pledged to bring with his administration. he has done nothing he promised, except remove Hussein,, who it proves was never a threat like Bush presented and lied.

>But in an Amicus brief filed by just about every
>media outlet during the trials of Cooper and

>Miller, they claimed that a crime was not

>committed due to the fact that Plame was

>outted years before by the Russians and

>brought back to the US for safety.

I said nothing of a crime and you invoking such shows how quickly the sheople run to the slaughter. Twas your president that backslid and now invoked the wrod "crime". Again, if he wishes to obfuscate, investigate, etc,,,fine. He still needs to make good on his promise of firing Rove. If no crime was committed, he should have "waited until the facts were in" b4 he shot his lying mouth off and said he would fire anyone in his administration who was involved.

> The desperation of the left is simply amazing.

The obfuscation of this admin is truly incompetent and the ease with which you are led is truly frightening. Again, you are unable to detach yourself from blind partisanship enough to focus on a single matter,,,,the Bush claims and promises. You are unable because he has been so dishonest from jump. Your reasons -why- he renigues, lies, etc, are irreleant.

>Also funny there was ZERO outrage over

>Sandy Berger putting classified docs in his

>pants.

Sandy Berger isn't the issue. Your problem has always been you prefer to argue history opposed to focusing on today's current problems because you are unable to comprehend, follow, or bring yourself to accept them. It's much easier and preferential for you to discuss what is in the past and not relevant to the Bush failures.

I was watching C-span today and there was something about a Republican
sponsored amendment to the Foreign Appropriations bill. It declares
that anyone who opposes the war in Iraq is "unpatriotic", or something
like that. Heard about it? I'm still looking for more info.

Now your "looney left" and "liberals" consist of the UK? Oh, that's
right,,,libs and the left are everyone and anyone who dare oppose
anything Bush does or says..

>I was watching C-span today and there was

>something about a Republican sponsored

>amendment to the Foreign Appropriations bill.

>It declares that anyone who opposes the war

>in Iraq is "unpatriotic", or something like that.

>Heard about it?

I've heard that sentiment espoused by this admin since the soldiers were
told by Bush not to voice their personal opinions unless they were in
support, but this is the first I have heard that they need a law to make
it official. How about that,,,,this admin wants to make it a law to
oppose them or their beliefs. Seig Heil!

>I'm still looking for more info.

Keep us posted.

You need to be on that thing with the heat indexes I see you guys
experiencing. I saw 105 in some parts of central Cal the other day, even
hotter down south. We had a 99 degree day a few days ago and it was
downright nasty,,humidity hovering at 98%.
I want to see what Labor Day brings (2006 models). Awesome move with
the Corbin,,,,at least from what I read and hear. You should be ready
for some of those long off roaders. Did you check that link?

It's not so bad Twist, it's like riding in a convection oven ;)
We got up to 108 the other day, Damn hot! But we're in a cold
wave now.....Down to 99 to 102 LOL!!! Almost too hot to drive
the Bronco with the top off, but not yet.
Corbin is headquartered in Hollister, I've had a number of my bikes
fitted by them. It's much better to ride or take the bike down there,
have them fit the seat while you wait, that way you do get a custom
fitted seat.

Hey Jim, has she voted for bills that you approved of?
Voted against bills that you didn't like? Just curious about
her record, guess I'll have to look it up.
She bothers me, her husband cheats on her, then lies about
it to investigators, all she does is stand by her man so she can
get her claws into the political arena.
She has zero morals in my book, but I guess there aren't to
many politicians that do have morals :)

lol...

Southern Cal's "problem" is caused by what's been hovering over Arizona for the past several days. Interior anyway. It got damn hot here in Ventura today. I think it got up to 75! Humid to. Made it feel like 76! ;-)

Hit and miss on the voting record shark which is true with most people.
Moral politician is an oxymoron. Like I said, I didn't vote for her but
her work on behalf of NYers hasn't been bad IMHO.

Boy... haven't worked on one of these in some time. After looking at the schematic... I see that virtually nothing has changed from Cobra 25's of 10-15 years ago. I guess that's not so surprising that they'd keep a reliable and excellent performing circuit around.

Guy sounds like a loony to me... Especially after reading this story! He was on a ['mission from God']..... Blues Brothers, anyone?

Uncle says jailed Iowa man wouldn't hurt anyone

PRINCETON - Ed Cole, 74, doesn't know why his nephew is being held at the Bureau County Jail on $50,000 bond, he just knows he's probably not coming home any time soon.

Actually the FCC does exist. Their biggest problem is that they get
the scraps from the Federal Budget. Your gripe is with the wrong
governmental body. Try complaining to the House and Senate
Telecommunicatons committes. They are ones that oversee the FCC and
are influencial in forming their budget allocations.

Many within the FCC would love to have another ten to twenty million
dollars annualy for enforcement. But right now most of the US taxpayer
money is going to build bombs, bullets and Hummers. Oh and I did
forget the payola of government contracts for the rebuilding of Iraq.
Then again we need to stop blowing the place up before we rebuild it.

>leaks are how washington work

Perhaps so, but the problem is a corrupt president who on multiple occasion swore up and down bloody hell that "-whoever- was responsible" would be fired. Now that it was found to be someone in the Bush administartion, he wants to "wait for all the facts" (he certainly didn't wait for all the facts when he lied to the nation and said the cuplrit would be fired). In addition to Bush lying to the country, he has taken the administration and lowered the ethics bar.

>not the story I have been following.

But of course, It's much easier to follow anything else than that of which forces you to examine your own position in support of a president who is unable to keep his word.

>I have never expected ANY president to tell us
>the turth

Lowered standards. Such apathy and accepted practices from our leaders is part of the problem of our society.

>GW certainly lies to us as did Clinton Bush's

>father Reagan,

Is that how you rationalize it as an acceptable practice and make it ok with yourself?? By pointing to other people's incorrect behavior and telling yourself "He hit me back first".

>It ends up being part of the job

I don't accept lying as acceptable or as a description of the job performances of the leader of what used to be the greatest country (and I have no doubt it will be again once Bush is gone).
Of his
administration, Bush told the country (another lie) his administration would bring "honesty and integrity" and "would avoid legalisms".

>gee Legalisms like due process

Your interpretation makes Bush look even more the imbecile then, for saying it in the first place.

_
And people like you continue to buy it and
bitch about anyone who dares oppose the lying, failing president. In
fact, it's people like you who idly whistle Dixie when Bush is found to
be lying or corrupt with a bristle of: "Yes, but (insert any other topic
as obfuscation here) and that is just how Washington works".

>becuase it is the turth

And the Whigs were a better party. And the price of tea in China is
relevant how?

>I AmnotGeorgeBush wrote:

No wonder this guy is a mess.
http://en.wikipedia.org/wiki/Karl_Rove

>No one could lower the bar from Bill Clinton

Perhaps you should bone up on your history, then, until you come to the
proper taught and accepted methods in the US educational system.

>Clinton comitted perjury lieing under oath used
>public money to hire an ugly hooker

And that somehow justifies ignoring the current scandals under Bush,
such as the likes of Jeff Gannon, who, btw, is way uglier than the
hooker you refer. As long as you continue to invoke history as a means
of defending the wrong doings of Bush, you are selling yourself short.
The repubs aren't the problem,,,,,repubs were a great party.....Bush
is the problem and he's dragging everyone connected to him into his sea
of piss. Bush is making more problems than there were before in
Iraq...you can't possibly say Bush is worried about the welfare of
anyone...more than fifty people will be slaughtered in Darfur by
"terrorists" between now and the time you read this post. Where is Bush?
Darfur has no Bu$h intere$t$. Now if Darfur had oil reserves.....

What enforcement allocation the FCC does get, is directed toward
protecting you and I from incredibly dangerous and overt sexual
connotations and profanity. All the enightened (and some not so
enlightened) countries in the world broadcast much more exposure than
the fleeting site of a woman's single breast, but not in this country.
The FCC must protect us from Janet Jackson's tit and the word "Fuck".
I'm telling you, the only thing that makes sense is the current
administration is rampant with blatant homosexuals who actually find a
woman's breast offensive. Add Jeff Gannon to the equation and this
admin's catering to the queers while trying to maintain they are
Christians must be addressed. Smoke and mirrors won't win Bush Iraq. In
fact, his house of cards seems to be falling more each day.

I still state the the FCC does exist.

Though I can agree with you that placing the CB service at 27 MHz for
what the service was intended, was a big mistake. The inablility to
control a band gone out of control from the early 70's has resulted in
a band that is essentially unenforced. WHat enforcement is now done is
in direct response to complaints from individuals to the FCC or to
individual's Congressman.

I have known of instances where COngressional representatives have sat
on the House Telecommunications commitee and have received complaints
from voters about interference from CB operators. The problems were
corrected. Also the FCC did shut down four operators in the West Palm
beach area about 10 yrs ago and they were never heard on the air
again. Seems that they lived in the flight path to Palm Beach
International Airport approach. Harmmonics from their station
operation were interfering with radio communications between planes
and tower. The FAA and the FCC did not take kindly to that.

Yes in rare incidents the FCC will enforce the regualtions. In most
part they are so understaffed that enforcement for all the frequencies
that they are required to is just not possible. I guess in a weird
way, you could say the FCC does not exist.

Iraq in one way is already a failure.

Prior to 9/11 there were no common bonds between Al Qai'da and the
Ba'athist Party and Suni radicals. Now that Saddam has been removed,
there are strong ties between the remaining Ba'ath Party members and
Al Qai'da. Bush's decission in 2003 actually united two factions that
were at odds with each other.

The way things have been handled in Iraq is a sham. Rumsfeld should be
canned and get someone in there that knows what the heck he is doing.

As it now stands, there can be no exit strategy. My guess is we will
have troop levels of at least 30,000 for the next 50 yrs. From what I
have been able to read and piece together, don't expect the troop
level to drop below 100,000 until 2008 or later. In fact we will most
likely ahve to increase troop levels in Afghanistan by 30 to 60
thousand in the next two yrs. God only help us if China goes
squirrelly with Taiwan.

If it was such a "non-issue", why was there such a hoopla when the
leak was first reported? Why the strong statement by Bush two years
ago? Why the Judicial Department investigation? Why have two reporters
been jailed for not revealing their source?

Because it most certainly -IS- an issue. The sad thing is that Rove
will probably get less jail time than Miller -- and she never even
reported the story!

>That "whoever" hasent been determined yet.

Permit me to play devil's advocate for a second,,,,,,reagrdless whether
the source was "found" or not,,,Bush renigued on his promise that anyone
INVOLVED in the leak in his admin would be "FIRED". He backslid when he
found out who it was and now, in typical Bush bulllshit, said he will
fire only if a "crime" has been committed. Again, perhaps he spoke to
soon when he made such a promise, but that's the problem, we have a
president who always speaks to soon and with pure golden unadulterated
bullshit.

>between Al Qai'da and the Ba'athist Party and

>Suni radicals. Now that Saddam has been

>removed, there are strong ties between the

>remaining Ba'ath Party members and Al

>Qai'da. Bush's decission in 2003 actually

>united two factions that were at odds with

>each other.

Yep. Bin Laden and Hussein are perfect examples.

>The way things have been handled in Iraq is a
>sham. Rumsfeld should be canned and get

>someone in there that knows what the heck he
>is doing.

>As it now stands, there can be no exit

>strategy.

Why not? I used to think that, too, but changed my mind for several reasons. You don't think that we would cease being a favorite target of the rabid Islamic world if we pulled out? I think we would. Sure, we would still have a few ht and runs, but hey, if Bush is protecting us as well as he says, we have nothing to worry about, hey? But, then again, how the heck did all those suitcase nukes get in here with all those protective measures that Bush has ensured via the bullshit Homeland security measures such as the Patriot Act?

>My guess is we will have troop levels of at

>least 30,000 for the next 50 yrs.

I say the next president in office will begin reducing our troops from Iraq.

>From what I have been able to read and piece
>together, don't expect the troop level to drop

>below 100,000 until 2008 or later. In fact we

>will most likely ahve to increase troop levels in
>Afghanistan by 30 to 60 thousand in the next

>two yrs.

Well, that is where the bulk should have been anyway.

>God only help us if China goes squirrelly with

>Taiwan.

>james

They already said they were,,,and Bush vowed to protect Taiwan at "any cost",,,,as long as it doesn't affect him. Wonder why the feds dug new tunnels and bomb shelters this year under the Ozarks?

I can't believe how much these go for. Both these and the XL are going for over $300, new in box. The funny thing is, the Grant LT are the same radio, and you can get them new in box for about $130. I did. I even emailed Uniden, and they said the were the same radio. I would put my $300 toward an HF rig.

Super on sideband. I talk all over the country on 10 meters with about 15 watts SSB. I put the grant LT in the car, and it is rock solid stable. The Galaxy 949 I had drifted like an unanchored boat.

I never post binaries, but that doesn't stop me from receiving them.
There's a whole world of things on usenet, games, software, current and old
movies, etc.

Where do you think the p2p pirates came from? (which is illegal and frowned
upon)

hey it was collecting dust and i figured to give it up to someone who
would get some use outta it.
i was referring to the other freqs in the 0-30 mhz range besides 11
meters that are being used by unsavory folks. really hard to police
them. oh wait, the arrl (or is that the aarp) can do that right?

The frustrated, childlike, sissified attempts to stop dissent are
posted
largely by one person in disguise...more aptly put "in drag"...and
that is mopeadope, the acknowledged poster child for effeminate
displays of stupidity in keyclownism. In revealing himself as such he
also reveals his extremely high level of frustration. This childlike,
spoiled little fella cannot deal with dissent. It is alien to his mind
because he has been a spoiled baby all his life. He got his parents to
give him toys and candy by publicly whining and making a scene when he
was young. Now, in his physical (notice, NOT mental) adulthood he falls

back on those childish ways as his main support of intolerant behavior
toward dissent. Simply put, this is a child in adult clothing...and it
cannot take being shown that someone won't give it its' way. Poor
baby.

Well, I'll be pulling my Hallicrafters HA-1 TO keyer out of the attic.

Ain't much slang at 40 words per minute cw :)

Which is legal anywhere in the ham bands (with the appropriate license)
other than 60 meters. :))

And the am kilowatt stations never could bother my 75 watts on cw then, and
they couldn't touch 100 watts of cw now. :)))

They tried - and failed.

Best regards from Rochester, NY
Jim

You need to get to about 13 words per minute minimum before you'll always
remember it.

I was running around 50 words per minute when I hung up my guns around 1969.
In 1993, I simply retested with no brush up. Hadn't copied cw since 1969
yet passed 20 words per minute ;)

Best regards from Rochester, NY

Hello, Twist

Actually, the guy who tried and failed was a known troublemaker and was a class A operator. This was back in the 60s and he had an advanced ticket that may have no longer been issued. They did have extra classes then, but no one paid attention to it. Once you had the general, you had everything.

When they were going to implement "incentive licensing", I went for my extra and, as long as I had to be at the FCC, I obtained my telegraph ticket too.

Not a big deal about cw. If one likes it, great; if not, so be it. But it is so much fun to get into these threads :)))

I love the way you say something in a nice way that gets some folks panties all knotted up - then you go fishing for a weekend (or a week) whilst the

group flames away.

Dang, I've gotta buy some stock in blood pressure medication when you send some notes. It is funny. Just like Mike got so hot about me enjoying communicating, some folks just can't stand the fact that you remain in the newsgroup.

All together now, "AKC does *not* own anything".

Hey, how's the price of gas down in your neck of the woods? Has Bush gotten it back down to $1.25 per gallon? Or have the "red" states suffered along with the "blue"?

I was wrong about Bush in one respect. It irritated me that the only plane allowed to fly out of this country immediately after 911 was relatives of Bin Laden. I *almost* thought the way Farenheit 911 was portraying it, but then managed to think.

If you or I were president at that time and we imported 80% of all our oil and Saudi Arabia supplied most of the oil .... what would we do? Most likely just what Bush did. They have us by the unmentionables.

We've got them right where they want us.

Better give more tax breaks on the SUVs. Better include yachts over 33 meters in length too.

What, me worry?

Yeah, I heard that. Senator Clinton should try and fix New York. I've news for ya. We've a *republican* governor and Clinton was elected to represent us in Washington, not in New York. There is a New York Senate. She in not in the NY Senate. She is a New York Congressman (uh, person?) in *Washington*.

Of course, facts never bother the religious right.

Don't confuse me with facts LOL.

Excuse me whilst I get a second beer. I limit myself to 3 beers per day, maximum. I have to shut down as those dang quarter kegs are a pain to move around in the house :)))

Best regards from Rochester, NY
Jim

I agree. Also, the tester said they use the ARRL practice tapes for the exam. So if you have the tapes, and you can learn the alphabet, you can pick up fairly quickly which if the practice codes they use. That is what I did. I studied every night for a month.

They should require CW for CW privilages, at the 13 WPM.

Yes, Jimmy Carter

Another left-wing crazy. He was so stupid as to suggest that the biggest
danger to our country (get ready now, it isn't weapons of mass destruction)
was our dependancy on foreign oil.

Hmmmm ... may I assume everyone is paying 95 cents per gallon of gasoline?

Dang! Weapons of mass destruction.

Social Security.

Every wonder why the Bin Laden family (relatives of that scoundrel Ossama
Bin Ladin) were allowed to fly out of the country right after 911?

If you were the president, what would you do?

Saudi Arabia provides a good percentage of the world's oil supply.

We import 80% of our oil.

We got 'em right where they want us!.

Man the photon torpedos. Danger, danger Will Robinson! Condition red.

Better give more tax breaks to the SUVs.

I just love the way some folks can ignore facts.
May they ever continue; I need a laugh.

Awful, isn't it? Dang, I had just seen a horrible gunfight. I had the jpg,
but sent it to Mopar as I couldn't handle it. It was interesting. You can
ask Mopar for the thing or I can ask him to send it back so I can send it to
you, but it was really horrific. Not something to show to women.

Hello, Frank

You are correct. However, what would you or I do had we been president at that point.

I'm thinking that Fahrenheit 911 mis-read some of that. Bush may have well been thinking "now wtf do I do?". No options, really.

Suppose you work for a company that pays you $2500 per week. Your property taxes are $10,000 per year and you are doing fairly well. There are no other jobs, anywhere, that pay over $500 per week, but, as of right now, your boss likes you. You have $200,000 in the bank and owe $100,000 on your home.

Due to the constant bickering, the Democrats and Republicans are no longer significant parties. For sake of (ridiculous, perhaps) argument the two major parties are the independents and NAMBLA. NAMBLA, of course, stands for North American Man Boy Love Association.

Your boss, who has some unknown way of knowing how you vote, states that he would be uneasy with any employees voting anything other than NAMBLA.

What the heck do you do? Abstain? You are screwed regardless of what you do.

You are correct about the Saudi citizens being involved in 911.

So .... this brings us back ... how do you vote?

I've enjoyed slamming Bush, but, upon some reflection, am not sure how much choice he had. Of course, his energy policies have not helped even a bit. Yes, big oil wants his policies, but ..... any chance of a 3rd party being involved here?

Perhaps we should all visit Saudi Arabia. Drink lots of Genny Cream Ale (most folks are not familiar with this beverage, but be aware you need a gas mask to be around anyone drinking this stuff) and hard boiled eggs. Then gas the place to death LOL :))

A bit far-fetched, perhaps, but I can see a problem dealing with the Saudis.

Any more thoughts to share?

73 from Rochester, NY

My limit is to split on Red Ripple for wine or 3 feathers for whiskey. :(

Mix the Ripple with 7-up and presto, you have champipple! Unfortunately, I
can't afford the 7-up.

Generally, I order bread and water as long as they don't charge ;)

Been scouting eBay listings no real intent to buy but it raised the question which radio from years ago did I personally enjoy the most. Without hesitation it would have to be my old Browning Mark III. Not better AM radio for it's day and you really felt like you were operating something. While all my friends jumped on the Yeasu and Siltronix bandwagon by Browning stood out from them all.

My favorite mobile from that era is a real toss up between Johnson Viking 352 and Tram Diamond 60. Both great radios in they're own right.

>> >Saudi Arabia provides a good percentage of the world's oil supply.

>>
>>
>> And let's not forget that most of the 9/11 hijackers were Saudi.....
>>
>>
>
>
>Hello, Frank
>
>You are correct. However, what would you or I do had we been president at
>that point.
>
>I'm thinking that Fahrenheit 911 mis-read some of that. Bush may have well
>been thinking "now wtf do I do?". No options, really.
>
>Suppose you work for a company that pays you $2500 per week. Your property
>taxes are $10,000 per year and you are doing fairly well. There are no
>other jobs, anywhere, that pay over $500 per week, but, as of right now,
>your boss likes you. You have $200,000 in the bank and owe $100,000 on your
>home.
>
>Due to the constant bickering, the Democrats and Republicans are no longer
>significant parties. For sake of (ridiculous, perhaps) argument the two
>major parties are the independents and NAMBLA. NAMBLA, of course, stands
>for North American Man Boy Love Association.
>
>Your boss, who has some unknown way of knowing how you vote, states that he
>would be uneasy with any employees voting anything other than NAMBLA.
>
>What the heck do you do? Abstain? You are screwed regardless of what you
>do.
>
>You are correct about the Saudi citizens being involved in 911.
>
>So .... this brings us back ... how do you vote?
>
>I've enjoyed slamming Bush, but, upon some reflection, am not sure how much
>choice he had. Of course, his energy policies have not helped even a bit.
>Yes, big oil wants his policies, but ..... any chance of a 3rd party being
>involved here?
>
>Perhaps we should all visit Saudi Arabia. Drink lots of Genny Cream Ale
>(most folks are not familiar with this beverage, but be aware you need a gas
>mask to be around anyone drinking this stuff) and hard boiled eggs. Then
>gas the place to death LOL :))
>
>A bit far-fetched, perhaps, but I can see a problem dealing with the Saudis.
>
>Any more thoughts to share?

Just that McCain lost my respect by making excuses on Hardball last night. Throw him out with the Reagan/Baker/Bush/Rove regime.

"Even though I'm a tranquil guy now at this stage of my life, I have nothing but contempt and anger for those who betray the trust by exposing the name of our sources. They are, in my view, the most insidious of traitors." -- George Herbert Walker Bush, 1999

2070. Re: FCC proposes to drop CW requirement on HF

Newsgroup: rec.radio.cb
Date: 2005-07-22 22:42:33 UTC
From: iamnotgeorge@webtv.net
Message-ID: <8508-42E17659-31@storefull-3253.bay.webtv.net>
Source record: 202958

>Actually, the guy who tried and failed was a

>known troublemaker and was a class A

>operator.

Whoda thunk it?

This was back in the 60s and he had
>an advanced ticket that may have no longer

>been issued. They did have extra classes

>then, but no one paid attention to it. Once you

>had the general, you had everything.

>When they were going to implement "incentive
>licensing", I went for my extra and, as long as I
>had to be at the FCC, I obtained my telegraph

>ticket too.

>Not a big deal about cw. If one likes it, great; if
>not, so be it. But it is so much fun to get into

>these threads :)))

Love it! It's like those who can't figure out how one can enjoy two
hobbies (cb and hammie) at the same time, instead of getting frustrated
with others who -can- walk and chew gum.

>I love the way you say something in a nice

>way that gets some folks panties all knotted

>up - then you go fishing for a weekend (or a

>week) whilst the group flames away.

>Dang, I've gotta buy some stock in blood

>pressure medication when you send some

>notes. It is funny. Just like Mike got so hot

>about me enjoying communicating, some folks
>just can't stand the fact that you remain in the

>newsgroup.

It's the fun factor, man! Those who are obviously having a blast and loving life are easy targets for those who aren't. It's all about envy.

>All together now, "AKC does *not* own

>anything".

>Hey, how's the price of gas down in your neck

>of the woods?

2.29 reg unleaded today. Damn diesel is setting records, though.

>Has Bush gotten it back down to $1.25 per

>gallon? Or have the "red" states suffered

>along with the "blue"?

Some of them red states are howling, like SC. I gotta give them credit in SC, though. I think they may have been the first state to realize what an error they made.

>I was wrong about Bush in one respect. It

>irritated me that the only plane allowed to fly

>out of this country immediately after 911 was

>relatives of Bin Laden. I *almost* thought the

>way Farenheit 911 was portraying it, but then

>managed to think.

You ever notice people talk about how fat or something Moore is, but never, NEVER attack a single point he made? Like, are they saying the Bin Laden's really didn't leave the country right after 911 with a government escort when ALL other flights were grounded?
Or the Saudi's really DON'T own up to 900 BILLION worth of America and really DIDN'T invest heavily in ALL the Bush private ventures before he became President? Or that Bush really didn't have lunch with the Saudi Ambassador on the 13th of Sept, 2001? WTF,,,wasn't it the Saudis that attacked us? Why, yes,,yes it was. 10 of the hijackers were Saudi (did Moore even make that point?) .
Perhaps there is one Moore basher among us who maintains Cheney's private companies DIDN'T benefit or profit from invading Iraq?
Or that Intel WASN'T crafted from policy?
And perhaps there is even one of those Bush-backers reading this that believe since Bush mentioned "911" and "Iraq" in the same sentence no less than 400 times over the past three years, there is truth by repetition.

>If you or I were president at that time and we

>imported 80% of all our oil and Saudi Arabia

>supplied most of the oil .... what would we do?
>Most likely just what Bush did. They have us

>by the unmentionables.

>We've got them right where they want us.

>Better give more tax breaks on the SUVs.

>Better include yachts over 33 meters in length

>too.

Sure,,,and here's a poor man's way of doing what the rich man is doing. Buy the object of your desire and put it ALL on credit. Even if you make the MINIMUM payment due, a portion of it is deductible. Of course, the more you pay for it, the more you write off. Oh yea, don't forget to put it in your "company's" name for it all. What's that? Don't have a company? Sure you do. You were in the miitary, right? You are now a "Consultant". Take out an ad and reap the fun. You don't even need show a profit. Enjoy it. It's not like YOU have to pay for it when the bill comes in. Take a loss on your "business" and do what the current admin is doing...make the next three/twenty generations pay for it. Enjoy.

>What, me worry?

>Yeah, I heard that. Senator Clinton should try

>and fix New York. I've news for ya. We've a

>*republican* governor and Clinton was elected
>to represent us in Washington, not in New

>York. There is a New York Senate. She in not

>in the NY Senate. She is a New York

>Congressman (uh, person?) in *Washington*.

>Of course, facts never bother the religious

>right.

>Don't confuse me with facts LOL.

>Excuse me whilst I get a second beer. I limit

>myself to 3 beers per day, maximum.

Doctors says a warm beer is good for kidney stones.

>I have to shut down as those dang quarter

>kegs are a pain to move around in the house

>:)))

>Best regards from Rochester, NY

>Jim

Enjoy your weekend,..sounds like you're getting right down to it.

You know that was one of the points the FCC mentioned in it's NPRM, the
frequency that Hams learn the code and then never use it, as one point in
their decision to drop Morse testing completely.

I bought a Grant LT for $130 shipped, which Uniden Tech Support emailed me and said was the same as the XL. All the mods from the XL works on the LT. Instead, they want to pay $300.

Hey Jay,
I'm wondering if you, or anyone else, wants that antenna you built-up for me a few years back? It blew down and I never have put it back up. Bent a radial but would be easily fixed. Did not damage any other part of the antenna.

Anyway, I've been cleaning out the garage and this Penatrator is just sitting there. If you'll remember, this is one fine antenna. Much better than original.

Let me know. Maybe we can meet half way (Valencia) or something?

One day, the teacher walks into her classroom and announces to the class that on each Friday, she will ask a question to the class and anyone who answers correctly doesn't have to go to school the following Monday.

On the first Friday, the teacher asks, "How many grains of sand are on the beach?"

Needless to say, no one could answer. The following Friday, the teacher asks the class, "How many stars are in the sky?"

Again no one could answer. Frustrated, little Johnny decides that the next Friday, he would somehow answer the question and get a 3 day weekend. So Thursday night, Johnny takes two Ping-Pong balls and paints them black.

The next day, he brings them to school in a paper bag. At the end of the day, just when the teacher says, "Here's this week's question." Johnny empties the bag to the floor sending the Ping-Pong balls rolling to the front of the room. Because they are young kids who find any disruption of class amusing, the entire class starts laughing.

The teacher says, "Okay, who's the comedian with the black balls?"

Immediately, little Johnny stands up and says, "Bill Cosby. See you on Tuesday!"

Hello Jeff:

Yeah sure, I'll take that antenna, half way no problem.

Thats a Penatrator 500 modified into a Mastadon 5000, with the lower
loss matching hoops.

You should see the Moonraker Six I am rebuilding.

Jay in the Mojave

> I still hear it on 10 meters. They should test for it if you want CW privilages.

And they should test for the knowledge of shoeing horses to drive a car.

I don't think CW will die. There will always be someone that wants to understand the beeping that's going on. If someone wants to learn it and use it, let them. the rest of us are dusting off our 2950's and waiting...

I had to email Riley to answer a lively conversation on 2 meters last night.

Seems some folks can't believe an unmodified 2950 is legal to use on 10 meters. If I read the rules right, an amateur can use any radio on the ham bands. The FCC only gets upset when one uses an uncertified radio on a Part 95 band. If the 2950 has it's jumpers in the stock position, it should be OK on the ham band. If modified, you can no longer use it anywhere. I'm still waiting for an answer.

I'm not allowed to use my 2950 on CB, my IC-2100 on MURS or my HTX-420 on FRS.

I can use my TRC-451 on CB, my 21-1910 on MURS and my 21-1860 on FRS, however, if I modify any of them to work 10 meters ,2 meters or 70 centimeters, I'm good.

I guess I'll have to pass Element 3 again. It expired on July 6, 2004. I missed the Extra test by two questions without even cracking a book the same day I passed General. No code. I'm still a tech that uses a CB as well as ham.

Hello Scott:

I haven't changed e-mail address's a lot. I did have a account with AOL, but then thats when they charged by the hour, and screwed everybody. And edited anything out of their news groups that told the truth about AOL.

Jay in the Mojave

Vinnie:

Now that sounds perfectly logical.

Really, they are not going to let those CB'ers have a key unless they
have take a CW test, are they?

John

privilages.

There is no need to have any test for CW. The use of it will stand or fall
on it's own merits without any artificial boost due to testing requirements.
CW will never die out completely, like classic cars, somebody will always
have an interest in it.

Leland:

Let's hope not!

Let us hope that shortly when CW only proves to be an annoyance to the CB'er attempting to get smokey reports and exercise their roger beep and echo mics--that they will mount a campaign to have CW banned from HF so it doesn't interfere with data communications and voice!

Actually the other guys were correct. I ran an experiment using a
Barker and Williamson low pass filter with a 32 MHz cutoff.

With the set-up below the SWR went high when the amp was turned on.

RADIO===>AMP===>SWR METER====>ANTENNA

With the set-up below the SWR stayed at 1.1:1 with and without the amp
on.

RADIO===>AMP===>LOW PASS FILTER===>SWR METER===>ANTENNA

Also the output of the amp showed about 110 watts without the low pass
filter installed, but with the low pass filter installed and the watt
meter connected after the low pass filter the output showed about 75
watts. That means about 30 watts was being transmitted above 30 MHz
even through the fundamental was at 28 MHz.

I doubled the value of the capacitors going form the transistor
collector to ground, and the SWR dropped to 1.5:1 with the amp on and
1.1:1 with the amp off. Then I add 470 pf capacitors from the
transistor base to ground and the SWR with the amp dropped to 1.3:1

with the amp on.

Re-inserting the low pass filter in between the amp and the SWR meter showed 1.1:1 with and without the amp on, so some harminoc content was still be transmitted but to a lesser extent.

A lack of working space inside the amp case made it difficult to install a pi-network on the input and output side of the transistor finals.

RESOLUTION: The SWR increased was caused by harmonics above the fundamental frequency, and they were outside the bandwidth of the antenna.

Lessons learned....

1) Just because your amp shows 100 watts output does not mean that 100 watts is being transmitted on the frequency you are on. It may be less, and if the amp is poorly designed it could be alot less.

2) If your SWR goes up when you turn an amp on it could be because your amp has increased the harmonic output of your transmitted in a non-linear fashion.

3) If installing a low pass filter between your amp and the watt meter causes the wattage displayed on the watt meter to drop it is probably because you amp is wasting power on frequencies far above your main fundamental frequency.

4) If you go to the trouble of re-designing the Palomar Elite 300 amp and clean up all the dirty output your real output power on the frequency you are listening to will only be about 70 watts RMS tops, and even then you are over driving the amp.

..and lastly...

The Palomar Elite 300 is a poorly designed piece of crap. Don't buy one.

Your right 800Whiskey... harmonic content is important. Most of the amps out there are very dirty... even if they have some biasing (although 95% have no DC bias at all). This is done because proper biasing methods add cost... and the potential market of buyers for these products don't demand good harmonic performance.

I thought they were, is one not, doesn't it indicate they are to be used in exams by ve's up till and beyond 2007?

I will check, but it is good if you double check me...

Double check the answers too, I have not... but I am sure they are good enough to land you a license.

John

No, the other guys were not correct, and you basically prove that fact
for yourself below.....

>With the set-up below the SWR went high when the amp was turned on.
>
>RADIO===>AMP===>SWR METER====>ANTENNA
>
>With the set-up below the SWR stayed at 1.1:1 with and without the amp

>filter installed, but with the low pass filter installed and the watt
>meter connected after the low pass filter the output showed about 75
>watts. That means about 30 watts was being transmitted above 30 MHz
>even through the fundamental was at 28 MHz.

No, that does -not- mean 30 watts were being lost to harmonics. What you fail to realize is that a low pass filter is a pretty good impedance matching device -regardless- of harmonics. You can shove anywhere from 5 to 500 ohms into one end and the output will be pretty close to 50 ohms (depending on the quality of the filter). Filters are frequently used as a kludge just for that reason. Your 30 watts are just being dissipated as heat or reflected back to the amp (since the filter really wants a 50 ohm input). Put your SWR meter between the amp and filter and you'll see what I mean.

>I doubled the value of the capacitors going form the transistor
>collector to ground, and the SWR dropped to 1.5:1 with the amp on and
>1.1:1 with the amp off. Then I add 470 pf capacitors from the
>transistor base to ground and the SWR with the amp dropped to 1.3:1
>with the amp on.

Which is basically proof that the problem is the output impedance of the amp, not harmonics.

>Re-inserting the low pass filter in between the amp and the SWR meter
>showed 1.1:1 with and without the amp on, so some harminoc content was
>still be transmitted but to a lesser extent.

If you want to measure the harmonic component of your output you need to use a spectrum analyzer. There's really no other way.

>A lack of working space inside the amp case made it difficult to
>install a pi-network on the input and output side of the transistor
>finals.

No need for a pi network -- just add a large variable cap across the input and/or the output of the transformer. Quit thinking harmonics and learn something about impedance.

>RESOLUTION: The SWR increased was caused by harmonics above the
>fundamental frequency, and they were outside the bandwidth of the
>antenna.

That would be a 'conclusion', not a 'resolution'; either way it's wrong.

Another point to consider is that if the amp -was- oscillating it wouldn't permit -ANY- of the fundamental to be passed or amplified because an oscillator is really a bandpass filter that works -too- well. Your problem is not oscillation.

If you are getting harmonics then they are coming from one of two places:

1) the exciter, in which case your filter should be between the
exciter and the amp. Actually, you need to fix the exciter because
something is probably broke; or

2) the amp, the cause being non-linearity of the amplification stage.
This is usually caused by incorrect bias, driving the transistors into
clipping, or a very poor power supply. IOW, something is seriously
wrong with the amp.

In either case, the use of a low pass filter is (as I stated before)
nothing more than a kludge. It masks problem but doesn't fix it. And
it also masks poor impedance matching (whether the matching is on the
inside or outside of the amp, or both). So a filter is -not- any sort
of definitive test for harmonic content.

>Lessons learned....

There's only one lesson to be learned here: Don't allow yourself to be
educated in RF electronics by CB amp voodoo-techs.

I certainly agree with you! I've been away from 11m for a few years, but often listened to shortwave (75m), and you've summed it up perfectly. I figure, the populus goes where the conditions (skip) allow the best, and thus, you get the ultimate sampling of the personality of most people out there. I grew up on walkie talkies, and then my first CB radio in the mid 1960's, so at least I got to experience a time when communications were decent!

From: assemblywizard@gmail.com (John Smith)
>Anger?

Absolutely. When you introduced personal insult as a means to convey your feelings, it was a knee-jerk response to feelings of anger or low self-esteem. Have it your way, it's the latter, then. By the time (if) you finish this college you felt impotant enough to invoke, you will learn such things. Insult has no place in debate. Next time, know a little more of your subject before you slap yourself for other's benefit.

>You fail to see satire and irony when you read

>it, you don't recognize "dry humor?"...

Satire is not laced with direct insult, nor is dry humor. Your first claim that you knew something of debate embarrassed you and you were pardoned when you demonstrated ignorance arrived by your insult. Fine. Tits up for you topping that with your incorrect interpretations of satire and dry humor. Satirists don't directly insult, as they have no need. They understand the subtle implications of their work and the generally educated public can correctly infer such from their work. But you, man, you brilliantly demonstrated not only a most unsound description, but a through misinterpretation of both satire -and- debate.

>... you really think I take you as anything more

>than the silliest of jokes?

That is exactly what you did by attempting to invoke -your- college. You did so in a most serious attempt, but since you totally embarrassed yourself with such a failed example, you now wish to claim it a joke. Agreed. With such an example of debate from you, a joke is what the educated interpret such as.

>Common guy (or girl, or it), sit down the opium
>pipe and step away into the light...

>John

So out of anger or low self-esteem, you have demonstrated and chosen an unhealthy preoccupation for speaking of both drugs and this mother complex you brought to the group. Please try and understand that your needs can be better met by someone who cares for you.

"I AmnotGeorgeBush" <iamnotgeorge@webtv.net> wrote in message news:8507-42E17744-129@storefull-3253.bay.webtv.net... From:

Jim:
>At my college, the "flames" here wouldn't even
>make a pimple on a good debaters A$$.

You know nothing of debate, as your posts
attest. They are made in haste and anger.
Your insults should be left at the door. Of
course, people in college familiar with debate
already know this.

>Not to be confused with the actual A$$'s here,

Right on cue. Thank you for the brilliance shared.

From: assemblywizard@gmail.com (John Smith)
>Yes, I'd say better if you limit your alcohol

>intake...

Everyone should limit their alcohol intake but what you say has been shown to be quite incompetent in both meaning, definition, and cohesiveness.

>Your nature suggests an abusive alcoholic,

Tell ya' what. Since you showed you knew nothing of debate, why don't you change the subject to yet another, like, hey, I have it,,the poster, again. Since it was the "poster" that illustrated your incompetence by pointing out your insults have no place in this skilled debate you tried but failed to speak of, why don't you attack him/her again. By Jove, and to think your young mind will one day be part of the generation that runs this country.
Look, just because I
piss on you like a frequent drunk when you hurl insults, doesn't mean I actually drink. Again, if you retained what you read, you would know this already, in addition to knowing debate has no place for insult. In fact, if you retained what you read, you wouldn't be having such difficulties with this college -you- mentioned that has you misdefining, misinterpreting, and repeating erroneoulsly in public what you feel is "debate". S'cool. Just look to me when you're feeling so bad about yourself again in the future and I'll set you right every time.

>bet the police records in your town of

>residence (both past and present) would tell a

>story of long term abuse of women and

>children...

Is that all you got? Was that your best? May God's hand find you before you graduate. You need guidance, young angry man.
So far you have mentioned a drug issue, a
mother complex, an alcohol problem, and now, violence against women and children.
This is really binding you like a disease.

>Yes, it does show...

And how.

I think the most beneficial part of learning Morse code at 13 wpm or
faster is the pride in the accomplishment. 5 wpm is nothing. It took
me two weeks to go from start to passing my code test, and I don't
even like Morse code. When I passed my 13 wpm test I was proud of my
ham license, because I had to work for it. There is no pride in being
a CB'er, because you don't have to earn it.
I'd like to see the code requirement go back to 13 wpm for HF
access. It separates those that want to be hams from those that just
think they want to be hams.

Google "American Hiroshima". Bush was briefed and made aware the
suitcases were smuggled in here.

>Even if there are suitcase nukes in the US

>waiting to be detinated their yield is in the

>range of 2 kilotons each.

In your reading this subject, you'll see the claim by Al Quida is to
kill 2-4 million Americans. Considering the large metropolis areas and
cities, their estimated number suticases can easily achieve this, no?

>Besides they are very high maintainance. You

>can't just set them on a shelf and come back a
>few yrs later and detinate them.

Agree. For some serious spooky reading, you'll probably find in your single search (of your favorite search engine) of "America Hiroshima" the article where several are quoted as predicting this to take place before Christmas of this year.

>+<>My guess is we will have troop levels of at

>+<>least 30,000 for the next 50 yrs.

I say the next president in office will begin reducing our troops from Iraq.

IANGB:
>Look, I have patiently went along with you

>here,

Actually, you began insulting and was gently corrected. Like a child,
you began to whine about the person who reminded you your manners.

> at every turn your posts have struck me as

>being written by an idiot.

Each time you make an insult, you convey your ignorance.

>At a review of your posts, as to their value, I

>have valued them as if they were written by an
>idiot.

This coming from one who felt it important enough to invoke debates at
your -college- and compare it to your poor interpretation of it.

>Now look, no offense meant here man, but

>you just strike me as being an idiot.

Look, no offense, but the second you felt like you knew something about
debate to the point you felt you had to invoke such, then turned around
and reduced yourself to insult in the same breath, well, you proved you
-were- an idiot.

>I admit, that is just a personal opinion of

>mine--

Oh, you weren't needed to admit anything, I did it for you by
illustrating your incredibly childish and -personal- insults.

>now really, do you mean to tell me you are

>now going to attempt to deny me from being

>able to form my own opinion?

Not at all, only your invoked and incorrect musings of facts of which
you know nothing.

>Trust me,

Kinda' hard to do after watching you herald your college as some sort of reference point on debate, then reduce yourself with insult when attempting to engage in such.

>I will continue to re-evaluate my

>opinion and, if ever I believe my opinion to be

>in error, will change such an opinion.

Fantastic. In the mean time, try not to make the same mistake over and over, as you have been doing with your retainment value. Lunacy is expecting a different outcome from a repeated act that yields the same results. Learn more about this "debate" issue you brought up and maligned yourself with.

>There is no need to consider me an irrational

>man, or so solidly cemented in beliefs I cannot
>change my opinion if logic and reason

>demands it.

Yes, well, that has yet to be seen. As long as you have been here and read each and every post, you fail to retain my temple is pure. Yet, for some reason, you continue to offer up conjurations of narcotics, alcohol, and violence.

>Besides, I am only one man, if all the others'

>consensus is that you are an intelligent man

>who is just held in an unjustly low opinion by

>me--

So you go by what others think. Very interesting that a consensus of what other's merely think could sway your non-perjorative humble opinion. <g> Interesting, but not surprising in the least.

>they are probably correct--then go along with

>their appraisal of you and put me far from your
>mind.

That retainment thing is awkward, huh?
Since you can't make up your mind, I was glad to assistyou in sucha trying endeavor.

Hello. I am planning on an extra long road trip through Wyoming and Montana (among other states, but those I have cell service in allegedly) with only the dogs for company. I'm trying to convince some overprotective people (that I love) that it can be done solo.

I don't have a cb, but am considering getting one for the journey.

Does anyone know if there are listeners out there in case of a car breakdown, etc? It would help ease their mind.

Thanks!!

OK, let me explain.

That IS my email, well, one I use for here and about. A few times I have noticed some are attaching my email to posts which are NOT mine... big deal, let 'em have fun, spoofing addys, isp's, email, etc is the name of the game... if it upsets me to much, I will jump in, confusion is good though, they end up helping me much more than hurting--they just can't figure that out...

That header contains some real, and some "not so real" info...

Thanks for showing me... but that is about standard for headers, and webtv is pretty lame, there is much better...

Warmest regards,
John

Lets Get Real: (but you go on ahead and get metaphysical if you like)

I felt pride and accomplishment when I made eagle scout, when I graduated HS, again when I got my BS, again when I got my MS, again when I married my wife, again as my son was born, again when I made senior programmer, etc, etc, etc...

When I finally challenged and defeated the morse test, I was only pissed at a bunch of old farts who would waste my time with such a silly and demeaning "rite of passage."

Yes there is Sandy, on ch 19 there's so many people in the air, you'll have to turn your squelch almost all the way up. Ch 9 is still the emergency channel.

What's mostly handy about a mobile CB is the ability to find out what's the traffic hold-up, and getting directions if you're lost. Most of the help comes from truckers, so you have to adapt to some of their lingo. :)

Sandy:

Yes, most any town/city will have some cb'ers...

You should have at least a 100 watt linear behind the radio though, so you are able to get some distance, just in case you break down more than a couple of miles from a town/city...

>Keep us posted.

The Ros-Lehtinen amendment to H.R. 2601, which was slipped into the
bill at the very last minute.

The amendment was "inflammatory and totally unnecessary. It implied
that those Americans who are concerned about the conduct of the war
and talk about withdrawal are unpatriotic. Despite 60 percent of the
American people being concerned about the war, the majority refused to
remove this amendment from the bill." (Rep. Slaughter, NY)

More important, the amendment prevents any timetable being set for pulling our troops out of Iraq, effectively extending our presence there indefinitely.

H.R. 2601 passed the House and is now in the Senate.

Filters can be designed for specific input -and- output impedances, and
usually are. I haven't seen a CB filter yet that wasn't designed for 50-ohms
in -and- 50-ohms out. One of the consequences of their design is that they
also work as "impedance filters", for lack of a better term. For further
reading I highly recommend "Electronic Filter Design Handbook" by Williams &
Taylor (McGraw-Hill).

True, but not very likely: If he's dropping 30 watts of harmonics in the LP
filter he would burn that puppy up in short order. More likely it's being
reflected back to the amp due to impedance mismatch.

>>Another point to consider is that if the amp -was- oscillating it

I've never found any problem on 75 meters. BTW, 75 meters implies something other than 80 meters. Ever. I doubt any licensed amateur would care to use any echo as it simply degrades your intelligibility. I've run across a few lids, but *very* few. None on 75 or 160.

80, yes, 75 no. 75 meters, to me, implies the bottom end of the band where
ssb and am cannot legally go. The cw folks are a great bunch and I've never
heard a problem there.

Odds are most of the hammies on hammie radio today are former cb'ers.
Nothing sad about it. If it wasn't for cb, hammie radio would be dead.
CB is where the hammie radio participants originate.

Except on broadcast audio AM..oh yea,,and FM. I'm no fan of echo when it is used for a total repeat, but ask -any- broadcast engineer that worked in commercial radio about a tinge of echo. There is a reason many of those obnoxious car ads and others use echo in their commercials. It not only grabs your attention, it demands it and is usually louder than the regular programming, as is the majority of commercials. But echo is used in ads because its characteristics work much better than non-echo on AM and FM. When the effectiveness of echo is no longer effective in advertsing on commercial radio, we will all cease to hear it. Big bucks advertisers don't repeatedly spend money on ads that don't work.

>I've run across a

>73 from Rochester, NY

>Jim AA2QA

Some of those lids save their "lidness" for their cb antics and some are so scared to talk on CB anymore that all they do is deadkey. I hear (CW) keyers on CB quite often. Well, not just CB, but the freeband more than CB. Those keyers sure as hell aren't owned by the CB crowd.
You are right, though. Less on 160 than 2. None on 75? We have this little town called LARGhettO in mid county. When you gonna visit your folks? I wanna show you around my RF stomping grounds

From: Frank Gilliland:
The Ros-Lehtinen amendment to H.R. 2601, which was slipped into the bill at the very last minute.
The amendment was "inflammatory and totally unnecessary. It implied that those Americans who are concerned about the conduct of the war and talk about withdrawal are unpatriotic. Despite 60 percent of the American people being concerned about the war, the majority refused to remove this amendment from the bill." (Rep. Slaughter, NY)
More important, the amendment prevents any timetable being set for pulling our troops out of Iraq, effectively extending our presence there indefinitely.
H.R. 2601 passed the House and is now in the Senate.

_
After some nosing around, word from the northerners is Michael Moore's movie had interviews with many soldiers espousing discontent and this is a direct response. That's it. I'm going to rent the damn thing. Hell with it. I'm gonna buy it and piss off even more folks.
Also, Jane Fonda is going back on the road with her political views after not really publicly commenting on politics since her last dance with 'Nam. She said the time is right and she could not refuse aftet being contacted by a rather large group of vets who were in Iraq. News is these vets are going to accompany her on her rounds of the country. The group claims they have the largest contingency of veterans against the war than in any other time in history..and these vets were there and know the actual time in Iraq. It is not the same as we are being fed. Of course, anyone who bothers with any other news other than what is found in the US already knows what a lying failure Bush is in Iraq.

Hello, Twist

75 meters (to me as well as the old-timers) implies the CW band. The phone band does have its' problem children. It did even back in the 60s. Been there, took care of those problems LOL.

What have you been up to? Strange signals from Saturn? See my post I just sent to the group. How many KWs are ya runnin? With that coliniar array plus the salt water, you must be doing good to affect Saturn :))

All kidding aside, I wish folks could set aside their prejudices and understand that we are all radio enthusiasts (read: *nuts* LOL). Of course, the intentional jammers none of us need.

Hello, Mopar

Forgive the *very* late response. Guess you are happy with Bush's deduction for the *big* SUVs.

I assume you are paying well under $2.00 per gallon for gasoline?

I saw Fahrenheit 911 and suddenly I figured the movie might be wrong. Bush and company let the Bin Laden relatives out of the country a couple days after 911. Via jet while all other air traffic was grounded.

I saw his total indecision over the attack whilst he was at the elementary school in Florida.

Perhaps it isn't his fault; it could just be that he realized how powerless he is against Saudi Arabia. Of course, he could claim weapons of mass destruction and invade, but let those oil pumps go off-line and we are *toast*.

We import about 80% of our oil, and Saudi Arabia is the biggest exporter in the world.

Yep, better go after the weapons of mass destruction and the protection of marriage. Let folks think you might actually be doing something.

LOL .... ROTFLMAO.

Yeah, get Howard Stern or Rush Limburger to run. Cut taxes on the rich, let them fill their yachts, and everything will be just fine.

Until the next oil embargo.

73 from Rochester, NY

iangb:
>Ahhh, I was attempting to give you an out,

I love your confidence, but you need check with some others who can help you with that poor retainment value of which you continue to suffer. After all, they can clue you in that many greater than you also were "attempting" to "give" me things. Please take your mongrammed seat on the short bus of failures who were ahead of you and for a much longer period.

>to blame it as drug/alcohol abuse problem

Yes, well that is the most favored tendency of projection, but I really don't remember asking you of your ailments, but if you need to share, by all means, I can certainly enlighten you further.

>instead of mental illness

That's understandable, because you are coRnfused with your emotions, facing difficulty in finding appropriate methods of which to convey how you adequately feel. A communication deficit obviously, but if you prefer to blame your dilemma on this drugs and alcohol abuse you speak of as a means of masking your invoked (again) mental illness, who am I to try and make you change your mind. Oh, wait a minute, I've done that many times with you.

> (with drugs/alcohol

>there is more of a chance of

>improvement--mental problems are frequently

>a lifetime problem)...

Since you found success with drugs and alcohol and violence you mentioned not once, but thrice, I am certain you may find some degree of success with your diminished mental capacity, also.

>Whatever the problem then...

You're no problem. You're part of what I tune in each day for sub-relaxation.

>GOOD LUCK!

Like none you'll ever know, and I say that with deepest sympathy. Perhaps a trip back to church will wake you up. If nothing else, read the Bible or ask Dave or Debby for help with your wickedness.

Hello. I am planning on an extra long road trip through Wyoming and
Montana (among other states, but those I have cell service in allegedly)
with only the dogs for company. I'm trying to convince some
overprotective people (that I love) that it can be done solo.
I don't have a cb, but am considering getting one for the journey.
Does anyone know if there are listeners out there in case of a car
breakdown, etc? It would help ease their mind.
Thanks!!

_
Channel 19 is widely used by truckers. They will gladly stop to help a
damsel in distress. If you're getting off the beaten path, there are
better choices in addition to your CB.

Sandy:
Yes, most any town/city will have some cb'ers... You should have at
least a 100 watt linear behind the radio though, so you are able to get
some distance, just in case you break down more than a couple of miles
from a town/city...
John
-
Mother of all princes! You -can- add value at times. That is very
practical advice for a woman traveling solo relying on CB.

I'll get the SB later. I'm planning on setting up the 8mm camcorder
I found in the dumpster on a tripod. It can be synced up later to
the Timmy board. I'll hook up the cheap external mike I bought to
use with EchoLink to the mike jack. I did some tests and the external
is clearer, just less bass and more treble. It only has to be good
enough to sync with the SB!

You can email me if you remove DONTSPAMME from the email addy.

It's more then you need. I used to run a modded TS-667V. I was told
I was heard on 19 over 40 miles away when there was no local traffic.
I moved back down to my TS-250, then to a low-end 2*455 amp. Less
current drain and I can still talk as far as I can hear.

If the band is open you'll talk. If it's not, you're pissing in the wind.

Scott:

rf is logarithmic...

if you run 100 watts and you hit someone at a 1 on their smeter, upping that power to 400 watts will increase your signal on their meter to a 2. If you up your power to 1600 watts you will hit them at a 4.

This ALL assumes omnidirectional antennas at both ends...

BIG POWER sounds a lot more impressive than it really is...

... but, you can plainly see how difficult it is for someone to know you are running that BIG POWER (especially in a mobile)... however, it helps if you don't turn your AUDDDIIIOOOOO!!! up to a "scream level!" ROFLOL

Hello, Mopar

You make a good point. Having a cb, cell phone, and amateur radio isn't all
that bad an idea. As with computers, backup, backup, backup! ;)

>guys. Most of the jerks I've heard on 75

>meters were former CB'ers though. Sad but

>true.

Odds are most of the hammies on hammie radio today are former cb'ers.
Nothing sad about it. If it wasn't for cb, hammie radio would be dead.
CB is where the hammie radio participants originate.

Hello, Twist

For what it is worth, I started in ham radio (1962), had a ball with cb
radio (1970/71) and am still active in ham radio ....

What is silly is to throw darts at each other. There are good and bad in
both groups. To think otherwise is a rather bit shortsighted.

You'll have no problem finding truckers to talk with on the CB, just be prepared to blush a little cuz some truckers tend to speak their minds w/o thinking.

Get AAA+ plus before the trip, it's the best investmentment you'll ever make.

So genocide is justified as long as the population doesn't have the means to
support itself? Contemporary Darwinism? Ethnic euthenasia? Apply such a
principle to people below the poverty level in the US and see what happens.

>mean you don't know what you are talking about

It means that there's no money to be made in the Sudan..... except maybe
from government funds spent on reconstruction after obliterating their
infrastructure. But even then, the average American is more concerned with
the price of a gallon of gasoline than the systematic slaughter of hundreds
of thousands of people halfway around the world. That's the same kind of
apathy that allowed the Nazi party to rise to power. The sad thing is that
nobody -- not the US, not the EU, and not even Israel -- are stepping up to
the plate to stop it. Maybe there would be some real action from the

"responsible" nations of this planet if the people being exterminated were
Jews, Christians, white people with blue eyes and blonde hair.....?

>The problem is the desert is moving south has been for centeries and
>every so often the next tribe hits the slaughter zone of the arabs of

And the US government did the same to the native Americans. Does that make
it right?

>we could keep them apart awhile but we turn our back and they will just
>make up for lost time

One could make a similar metaphor regarding internet anonymity.

Sure am, been happier, but was a hurt'in a lot more a couple
of years ago, compared to today. But I'm doing my part, ride
the bike to wok at least twice a week, drive the sable twice
a week, then I only drive the Baja once a week to work.

>
> I assume you are paying well under $2.00 per gallon for gasoline?

Nope, don't expect to either. You would have to live in a
fantasy world to think anything different.

You really liked that fiction? As twist has said, he's an entertainer
not a politician, though some have categorized him as such.

>
> I saw his total indecision over the attack whilst he was at the elementary
> school in Florida.

Saw that the other night on PBS. Did you think it was indecision
on how they took some 4500 planes out of the air in only a
45 minute period? How about the fighter told to shot down any
plane that didn't identify itself or comply with their commands?

>

Exactly, and as Mad Dog suggested AAA comes in handy on those long car
trips too.

This won't help you with the radio selection, but just so you know, once the SWR is set right, it will never change (short of a damaged antenna,coax, or major change to the body of the vehicle), no matter what radio is hooked up to it. It's all about the antenna and what it's mounted to. Has nothing to do with the radio at all...

The best mobile rig I've ever had was the President/Uniden Grant.
Rejects engine electrical noise, and has superior reception. I tried
the HR2510, but was disappointed. Hope this helps some

I had both in the car. I have the Grant LT in the car now. Great radio. I stuck the 2510 in the house as a base. Both are great radios.

It appears the audio portion os the grant is better. Just louder and clearer on receive. The 2510 is better on SSB, and has some nice features.

Vinnie S.

not justified just not stopable by the US, we would only get to decide
who is going to killed

the south of sudan decided to stop the north fought a civl war and thus
redirected the problem to Dafur

nietehr side is interested in dealing with it problems the arabs
contiue to allow thier popuplation to expand unchecked the tribe in
line after dafur refuses to see their ox is next, the Dafur reufsed to
cooperate with teh south whcih might weel have saved it

dafur and most of africa is the basis od the SciFi concepts around the
"Prime directive"

do we keep the dafuries alive to have them slaughtered next year
instead?

not realy becuase no one has a solution that stops the problem

We show up in sudan I garauntee war with us in the middle of it and all
sides shooting at us before

The US doesn't kno enough to interefere

One there is a solution? that is a strech?

the solution would be for the various side to deal with the underlieing
problem too many people in a declining eco system, and the only thing
we could do is impose our own birth and death control system

they are enaged in fighting it out and one side is losingand neither is
realy playing with full deck

where is Your solution, I have freinds moderate places You come up with
something that has a chance of working I'll my best to put on somebody
desk

If I had a solution id be sending meo after meo or trying to tlak with
newspapers etc but I don't

defferent problem entirely, and to stop hitler we had to save Satlin
another mass murder of his own people, but then the choice was to stop
hilter from taking over stalins lands and contueing to kill them and
his own folk or just allowing satlin to have his way, well we made the
best choice, but it was no total victory

2247. The generic CB argument...

Newsgroup: rec.radio.cb
Date: 2005-07-27 22:54:25 UTC
From: Bark At The Moon <BarkBark949494949@aol.com>
Message-ID: <hs2ge19qkpm5e8abo72dnlsn3cip41dk61@4ax.com>
Source record: 203134

After listening to the CB band I've noticed that almost all CB on the air arguments go something like this;

First they are almost always white male to white male arguments as most females left the CB band by the late 1970s, and the black members of the CB band tend to have better on the air etiquette.

<Begin generic CB argument>

White Male CB'er # 1: You're a queer. Suck my dick.

(CB'er # 1 doesn't seem to realize that by asking for oral sex from another male he just admitted he is a homosexual, because a heterosexual male would never ask another male for sex)

White Male CB'er # 2: <Same basic insult with sex as a repeating theme>

<Insert the word fuck or some derivative of the work fuck every few seconds. Also insert the words queer, homosexual, cock sucker, and the like every few seconds. If you are in the Southeastern United States add the phrase "nigger lover">

White Male CB'er # 1 claims he will shut down the other CB'er with his CB radio.

White Male CB'er #2 makes the same claim.

<LOOP back to the first insult and continue until the cows come home.>

I suspect the reason why stupid people can only muster insults of a sexual nature is because they lack the talent, creativity, education, or intelligence required to generate a more interesting argument.

;)

BATM:

Hmmm, same thing on the trucker chan here (channel 17 in california). You can always pick another quiet channel, and if you want to hear some black/ethnic/ebonics, tune into channel 6--anywhere in the nation you can pick 'em up when the skip is in--most are multi-kilowatters.

Women, why some of those women ARE truckers, funny, I can tell the female voices from the male--try listening closer...

Women, well, there are never enough women on the CB band, still, probably about 10 times the ratio of men-to-women which you find on the ham bands...

John

>and/or force birth control on the arab

>population of the region

Arab? Isn't that the same type people as in Iraq that you just said
weren't the same?

>Dafur is just the latest in the Sudan

>basketcase

Actually, Darfur is just the latest problem in Africa.

-
My point exactly. Look how concerned Bush is when innocents are being
slaughtered in a country like Darfur that holds no intere$t$ of
Bu$h! No black gold, there.

>mean you don't know what you are talking

>about

No, you don't and this link proves it.

http://apnews.myway.com/article/20050727/D8BJUIK04.htm

The highest ranking general is saying we can be pulling troops out next
year,,just like I publicly pondered and which you claimed the opposite.
But you go on and claim differently and tell me I don't know what I'm
talking about.

>The problem is the desert is moving south has
>been for centeries and every so often the next

>tribe hits the slaughter zone of the arabs of

>sudan north killing off the next tribe in line

>been going on my whole life

Actually, it's been going on much longer than that. The Iraq/mid east
debacle can be directly traced to Isaac and Ishmael. Unless you're
omnipotent, that's a hellofalot longer than your whole life.

>we could keep them apart awhile but we turn

>our back and they will just make up for lost

>time

That's right. Now if only someone could clue baby-Bush.

>comply with their commands?

Too late and thousands of dead bodies later. Saying it will never happen again is no solace to the dead and their families. It should have never happened and Bush had mega adequate warnings, written, verbal, and an entire report about Osama's plans to attack the US with airplanes.
Sorry shark, but when Bush is still spending wildly and giving tax cuts and our soldiers are shoving spare metal sheeting and metal scraps under their issued attire because Bush has STILL failed to armor the Humvees, he is a disgrace.

I'll get the SB later. I'm planning on setting up the 8mm camcorder I found in the dumpster on a tripod. It can be synced up later to the Timmy board. I'll hook up the cheap external mike I bought to use with EchoLink to the mike jack. I did some tests and the external is clearer, just less bass and more treble. It only has to be good enough to sync with the SB!
You can email me if you remove DONTSPAMME from the email addy.

That's -exactly- what you said. You suggested the problem should be
ignored on the premise that nothing can be done. But your premise is
faulty because there -are- actions which can be taken to end the
slaughter. Any solution may only be temporary, but that's still better
than no solution at all, and it provides time to devise a more
permanent solution (and hopefully not a Hitleresque "final solution").

>One there is a solution? that is a strech?

Hablas Ingles?

>the solution would be for the various side to deal with the underlieing
>problem too many people in a declining eco system, and the only thing
>we could do is impose our own birth and death control system

In case you haven't been keeping up on the facts lately, the
underlying problem is government corruption, not overpopulation. The
government of Sudan has repeatedly squandered every cent of foreign
aid given them, irrigation projects planned and financed decades ago
haven't even been started, agricultural education is practically
nonexistent, food and goods provided by other countries as relief
packages are regularly hijacked (assuming they are allowed into the
country, which frequently never happens)..... the country is being
skinned and boned by it's own government.

>they are enaged in fighting it out and one side is losingand neither is
>realy playing with full deck

The only person that isn't playing with a full deck is anyone who
thinks that the only action the US can take is to impose "our own
birth and death control system".

>where is Your solution, I have freinds moderate places You come up with
>something that has a chance of working I'll my best to put on somebody
>desk
>
>If I had a solution id be sending meo after meo or trying to tlak with
>newspapers etc but I don't

You don't have a solution because you don't have a clue. Get one. In
the meantime, work on your spelling so when you -do- have a solution
it can be understood.

>> >We show up in sudan I garauntee war with us in the middle of it and all

>> >
>> >nope never said it was right merely unstoppable
>>
>>
>> Yet we stopped Hitler.
>
>defferent problem entirely,

Not at all. Hitler's solution was to exterminate an entire race of
people he thought were causing all the problems. Same thing that's
happening in Sudan. The only difference is that while Hitler employed
the government to execute the Jews, the genocide in Sudan is being
done by it's own people and corrupt government officials are padding
their wallets from the melee. Genocide for profit.

> and to stop hitler we had to save Satlin

>
>learn History

Learn it yourself -- Stalin killed people because he was paranoid, not because he had a beef with some race or ethnic group. But we couldn't stop him for a number of reasons, not the least of which were because: 1) we were drained from fighting Germany and Japan; 2) we didn't have the nuclear capability to take the USSR; 3) we didn't know how far the USSR had come with their own nuclear programs; 4) it would have been really, REALLY bad policy to turn around and wage war against your ally in the largest and most deadly war in history.

But that was then and this is now; The US has the means to stop the genocide that is occuring -now- in Sudan. But neither Bush nor his congressional lapdogs will take any action, nor will they allow any action to be taken by the US. The reasons are strictly partisan -- the Republicans are currently blocking several Democrat-sponsored bills at the committee level that would, at the very least, speak harsh words against the government of Sudan. So the "underlying problem" in the US is not just apathy, it's that the Republican party is more important than genocide (which should come as no great suprise since it's clear that the party is more important than national security, as proven by the Rove debacle).

So do you want to continue to fabricate more lame excuses? or are you going to continue posing with Dave as the poster children for Bush's "No Child Left Behind" education campaign?

I don't know about the more populated areas of the US, but if a woman
driving alone in the inland NW calls for help on a CB she better be on
the Interstate or have a shotgun. Otherwise it's just an invitation to
get raped. Even some of the major state highways can have little or no
traffic on them for hours, and it's a long walk to any civilized
outpost.

The only action the US can undertake is to decide who get killed
dafuries or the arabs we could also enage in birth control but not else
we do esp on our own

>

Don't be sorry Twist, It's your opinion and perception,
free country (Isn't it :))
It could have been prevented long before Bush II, it should've
been dealt with Bush I & Clinton. For that fact, Reagan should have
never given him the time, weapon & training to fight the Russians,
but the old saying.....My enemies enemy, is my friend.

The US should been far better prepared and the various president and
mambers of congress should should have done a better job over the years
Like Kerry and Gore, and we are spending too much money playing catch
up (as always happens when yuo try to play cath up on something like
this)

I voted for Bush, both of them because I felt they were better than the
other choice I suspect i may end up voting for a 3rd Bush if the choice
is between him and anybody I have seen sign of on the Dems side

>the troops etc

Contact your senators and reps about the following:

H.RES.277 : Expressing the sense of the House of Representatives that due to the allegations of fraud, mismanagement, and abuse within the United Nations oil-for-food program, the growing record of human rights abuses by United Nations personnel in the Democratic Republic of the Congo, and the lack of action by the United Nations in response to the genocide in the Darfur region of the Sudan, Kofi Annan should resign from the position of Secretary General of the United Nations to help restore confidence in the organization.

Latest Major Action: 5/12/2005 Referred to House committee. Status: Referred to the House Committee on International Relations.

H.R.1424 : To impose sanctions against perpetrators of crimes against humanity and genocide in Darfur, Sudan, and for other purposes.

Latest Major Action: 4/7/2005 Referred to House subcommittee. Status: Referred to the Subcommittee on Africa, Global Human Rights and International Relations.

H.R.1435 : To amend the Internal Revenue Code of 1986 to deny the foreign tax credit and the benefits of deferral to companies doing business directly or through subsidiaries in Sudan until the Government of Sudan takes demonstrable steps to end genocide in Sudan.

Latest Major Action: 3/17/2005 Referred to House committee. Status: Referred to the House Committee on Ways and Means.

S.CON.RES.17 : A concurrent resolution calling on the North Atlantic Treaty Organization to assess the potential effectiveness of and requirements for a NATO-enforced no-fly zone in the Darfur region of Sudan.

Latest Major Action: 3/10/2005 Referred to Senate committee. Status: Referred to the Committee on Foreign Relations.

S.495 : A bill to impose sanctions against perpetrators of crimes against humanity in Darfur, Sudan, and for other purposes.

Latest Major Action: 3/2/2005 Referred to Senate committee. Status:
Read twice and referred to the Committee on Foreign Relations.

That's just a few from the current (109th) Congress. Wanna see a list
of the bills (several dozen) from the 108th and 107th Congress that
were left to rot?

What amazes me is how you are a living, breathing oxymoron -- actively
promoting apathy. Either you are so morally deranged that you support
and defend the practice of genocide (and try to discourage those who
seek to stop it), or you are completely ignorant. Yet you have the
gall to accuse -me- of being insulting..... are you SURE you aren't
Dave Hall?

No doubt. A friend of mine uses them for all kinds of crazy stuff, he's
even used them for towing his snow-plow truck. All he does is take the plow
off first. They're a good source for directions too.

I grew up on the CB band in the 1970s. I may have my ham license, but
27 MHz still feels like home.
Unfortunately the quality of the people on the CB band has degraded
considerably on the CB band since the 1970s. In the 1970s I almost
never heard profanity on the CB band, but now it is a difficult to
make it around the 40 channels even once without hearing the F word or
one CB'er calling someone else a faggot.

Source record: 203173

Actually, Darfur is just the latest problem in
Africa.

>your point?

Perhaps your geography needs polishing.
-
My point exactly. Look how concerned Bush is when innocents are being slaughtered in a country like Darfur that holds no intere$t$ of Bu$h! No black gold, there.

>mean you don't know what you are talking

>about

No, you don't and this link proves it.
http://apnews.myway.com/article/20050727/D8BJUIK04.htm

>yea right it come up page not avalable

Hmm,,it was working yesterday, but by today this is old news. If you still haven't heard about it or read about it by today, I'll find you another link.
 The highest ranking general is saying we can be pulling troops out next year,,just like I publicly pondered and which you claimed the opposite. But you go on and claim differently and tell me I don't know what I'm talking about.

>You must have me mixed up with somebody

>else

Nope. Your cornfusing yourself. You said those in Darfur were not the same type people, and I said they were the same type terrorist, according to Bush. Then you most certainly claimed they were Arab and I eloquently allowed for your claim, as they most certainly are the same "type" people as the terrorists pouring into Iraq daily.

>The problem is the desert is moving south has
>been for centeries and every so often the next

>tribe hits the slaughter zone of the arabs of

>sudan north killing off the next tribe in line

>been going on my whole life

Actually, it's been going on much longer than that. The Iraq/mid east debacle can be directly traced to Isaac and Ishmael. Unless you're

omnipotent, that's a hellofalot longer than your whole life.

>not realy

Yes, really.

> The afirca problem are 20th century phenon

>caused by the colozation and decolinzation of

>Africa and the middle east and southeast asia

And on what continent does Iraq exist?

>Got nothing realy to do Issac and Ishmael

Has everything to do with it, as that is where the Arab/Jew split originated and the malice between the two began. Isaac was the son of Abraham, as was Ishmael, but Ishmael was the bastard son of Abraham to his wife's handmaiden and servant Sara, an Arab. They fought over who the land rightfully belonged to and the Arab/Jew conflict that churns today is still fighting the same war.

>we could keep them apart awhile but we turn

>our back and they will just make up for lost

>time

That's right. Now if only someone could clue baby-Bush.

>about what

What you just said.

>That we could keep apart for awhile then

>watch more bloodshed why would we want to

He's doing it now with Iraq. Why don't you ask him?

>catch up (as always happens when yuo try to

>play cath up on something like this)

>I voted for Bush, both of them because I felt

>they were better than the other choice

There -was- no better choice this last time around. They were both losers and most everyone knew it.

>I suspect i may end up voting for a 3rd Bush if

>the choice is between him and anybody

You won't get that chance. Jeb ruined himself with the Terry Schiavo issue here. And he said he isn't interested and specifically said he will not run. Of course, as soon as he flip-flop/lies and decides to run, I'm sure you would vote for him. For some peculiar reason, when a Bush lies, you make excuses.

> I have seen sign of on the Dems side

What you have seen is the first woman president and she scares the hell out of people like you who are going to made to pay their fair share once again.

> Landshark

Some times the signal doesn't even drop, especially when it's that ld stuff to Australia. But yea, their are those times where the kicker is needed.

>Get real!

>From 200 to a kw on an omniantenna is not

>quite such a shock (still, pays to be tricky)...

>John

I don't run power on my base at all. I don't need it on the base. A visible water horizon and a directional gets 'er done. On the boat, I can sound like a big strapper with the right power mic. Add a hundred watts to that and one could damn near shut it down at times.

Of course the republican memebrs of congress were not in psotion to run
for president of course, but i choose to single thoose too out for
specal attention

might not Jeb is not my first choice for the GoP nodd but you never
know in politics I can't tell you how many times I was told the GW did
not stand a chance of being elected or then reelected

I hope not I was rather partail to Libby Dole, but mrs clinton doesn't
scare me we have already seen 8 years of Mrs Clinton as president, I do
object to her end run arround the constitution though

and I was referring to whole potecail feild on the Dem side Kerry
Clinton Gore a few others

not realy in the abilty to realy stop them

If I thought we had the troops and supply logistics and the a plan that
could work Id be all for it, but right now it is like bosnia was in the
80's anda somalia that operation went so well I am certainly in a hurry
to try that out again

That population is already dead the question is will they stave to
death or be murdered, the genocide is already over and done with the
time where the US could have acted with any effect is long past

Hey Twist, it's a radio tune to boot! (ever hear it?)

Lyrics for Album: Revolution Starts Now (F the CC)

I used to listen to the radio
And I don't guess they're listenin' to me no more
They talk too much but that's okay
I don't understand a single word they say
Piss and moan about the immigrants
But don't say nothin' about the president
A democracy don't work that way
I can say anything I wanna say

So fuck the FCC
Fuck the FBI
Fuck the CIA
Livin' in the motherfuckin' USA

People tell me that I'm paranoid
And I admit I'm gettin' pretty nervous, boy
It just gets tougher everyday
To sit around and watch it while it slips away
Been called a traitor and a patriot
Call me anything you want to but
Just don't forget your history
Dirty Lenny died so we could all be free

Sarangel Music (ASCAP)

Hello All:

Though I would share this with ya's all:

http://www.sk2kw.se/SK2KW%20WEB/SM2DMU/80m/80m.HTM

This is a 80 meter four element, beam antenna. It real incredable big. I am sure the "Nut Cake" Light went on bright with this one. How ever the guys that put this one deserve a "Job well done" pat on the back.

Please don't e-mail for quotes for this antenna hehehehehehee

I believe the Radio Shack cable is actually Belden 8237, so Tandy doesn't actually make the cable, the only crappy thing they did is to choose a lower quality cable for the assembly (probably originally intended for CB use for which it would be OK).

In the Southeastern U.S. I've found CB to be a window in to the
local trailer parks more often than not. The middle and upper class
are running around with cell phones and FRS radios instead of CBs.
Gone are the days of MoonRaker 4s and big radio towers peppering the
neighborhoods of America. Now the same people who would have been
talking on CB's in the 1970s are running around with cell phones and
FRS radios today.
Even the Ham Radio frequencies are largely vacant compared to the
activity they enjoyed in the 1980s. The Internet and cheap cell
phones has dramatically reduced the influx of new blood in to the
radio hobby.

2312. homebrew car/mobile antenna

Anyone have good tips to homebrew CB car antenna? No 1" pipe... just whip... that stays with me when driving > 60mph. I'm going to use magnet mount on my car roof. About 1,5m to 2m would be nice length. Any advice or site where can find something about it?

Yes, and many of the veteran CB-ers (you know, the ones we grew up, respected, and learned from) are long gone.

Speaking of FRS, I heard back in the late 1980's that these frequencies were the anser to people's complaints about abusive behavior on the CB. That is, these new bands would not have skip, and supposedly would hamper desires for power and obscene language. Whether or not, I still think the CB bands were better, and more fun. Yes, sadly the world reflects all communications, morals and all, but what else can we do, but try and be positive.

Barney:

First, Einstein was found wanting to his teachers, indeed, they all thought the boy lacking in mental horsepower. If not for his parents contacts (and probably greasing the palms of those in control) he would not even have had his meaningless job in the german patent office, it was the mailroom I think... before we found him and gave him the title of "likely the world's most brilliant man/scientist to have ever lived."

Now, get a grip on yourself, nothing has changed. Still, the gifted are not able to be recognized--I suspect many live in those "trailer parks" you just mentioned. Perhaps some have CB radios...

Indeed, this world is run by a bunch of "C" students which have barely graduated--they are intelligent enough to recognize the more gifted are a REAL danger to their jobs, are fewer in number than their fellow "C students", and so band together in gangs and chase them off to corners...

The world has not changed....

Is anyone familiar with a CB-er who used the handle "The Colonel" during the late 1960's and early 1970's, operating below channel 1 (possibly 20 ch below)on the AM side? He supposedly operated in the midwest (Chicago area, to western Indiana). I heard him myself, and would like to compare notes with anyone else who may remember such a character.

I remember a deep voiced man with that handle back in 1975, but I
can't tell you what channel he stayed on. He was in Rock Hill, South
Carolina. I would guess he monitored channel 8, but I really don't
know. Probably a different person.

Wonder how'd compare with that rhombic 600 feet on a leg 200 feet over salt water? Of course, that rhombic was optimized for a tad higher frequency, but inquiring minds and such ..... ;)

73 from Rochester, NY

真的边玩边赚钱

上网可以赚美元?本来我也是不相信的，
天下哪有这样的好事?反正闲着也没事又不用花一分钱，试试吧!注册成会员，然后下载小工具,填好自己的注册名和密码登陆,这个小工具占了屏幕1/10的地方,不影响我上网和游戏.不知不觉一个月过去了，连个影子也没有，我想坚持，再坚持一段时间，第二个月我盼望以久的汇款单终于到了，400美金折合人民币3200多元啊，我还真有点不敢相信了，上网费解决了,网游的点卡费也搞定了,零花更是够用,我现在是信心十足，各位网友们，挣钱才是真本事，如今的社会离开了什么都可以，但万万离不开钱!赶快加入吧!挣了钱自己乐的时候别忘了我就行了.

注册网址： http://www.cashspace.com/signup.asp?refID=chouwei
1小时 = 1美金，不用点击，在线就挣钱！上网一小时赚一元美金【附英文对照表】

会看广告就能赚钱，这种方式在国外叫广告商买单.
在做cashfiesta的不要做啦！来看看cashfiesta的另一家公司吧：cashspace，不用点offer..保证每月有钱领……

[推荐]一小时赚一元美金，和在麦当劳打工的报酬差不多.不用点offer..保证每月有钱领

**** 本人累计点。 1个小时大约 1.0美金 = 人民币8.1元

**** 推荐人累计点。（1次 0.1美金 /（2-7次） 0.05美金

**** 使用时间无限。（有时候要记得 Shut down 啊。 ）

**** 最少积储金额 400美金
（很快的。最多也是1个月。 ）

**** 你想睡的时候。。去办事的时候。
就开了去就行。可以自动的累计点数。

**** 一个小时=60点。 60点就=1美金

查你所得酬劳的网址：http://www.cashspace.com/login.asp

您了解Cashspace吗？用过CashFiesta几个月后的朋友，你可以摆脱每个月为了成为黄金会员所要劳心劳力的功夫，因为我要推荐比CashFiesta还要好的网站。新的Cashspace网站跟CashFiesta一样，公司本身也是信誉良好的美国网络广告商，同时毋须缴交任何费用即可申请加入，而且只要上线即可累计薪资；除此之外，CashSpace又兼具几项CashFiesta所没有的优点：

第一、获利方法简单：

有别于CashFiesta需每个月注册Special
Offer或积极找寻下线以维持黄金会员资格的规定，
CashSpace计费机制采每上线小时即可获得1美元的酬劳（和在麦当劳打工的报酬差不多）。换句话说，就算你不拉下线，自己单打独斗每天上线三小时，一个月收入都大概会有90美元(合计人民币750元)的额外收入。当然，如果你是企图心旺盛的人，要一个月收入上万块真的不是难事！因为CashSpace并不限制你每天的在线时间，而且不需要老点击什么小人，更不需要为了担心使用外挂程序被查到而提心吊胆，使用者只须打开一个广告窗口
(大概占整个屏幕不到十分之一大小！)，你就可以放心的去做自己的事了！

还有一件更棒的发现，过去使用CashFiesta广告条的时候，当你要同时玩全屏幕的计算机游戏时，屏幕上方总是会不时闪烁广告条的图样，害得有些朋友看不清楚游戏画面，不过现在CashSpace可没有这种恼人的状况了，大家可以安心使用。

看到这里，不知道你是不是也心动了？如果你愿意尝试，请跟着我做，让我带你找到更轻松的网络赚钱！

第二、实现方法容易：

每次打开电脑时，双击下载的小软件: Cashspace !
（下载网址：www.cashspace.com/download.asp
）输入用户名和密码后点击Login，会自动打开一个小广告条；把鼠标移到广告条最左边的灰色旋涡图象标志由上而下的划过一下，由灰色变亮就可以了！
旋涡图象标志由暗变亮平均50-60分钟左右会要求鼠标划过一次。
一定记住只有灰色旋涡图象标志变亮了才开始记时！

第三、如何拿到酬劳？

Cashspace
每月中旬结算。如果你的帐户上的酬劳达到最低要求，即可要求支付。通常款项都会在次月底汇到你的手上。如果没有达到最低要求，则累积到下个月。
因为我一般来说我都是CashFiesta跟CashSpace
同时上线，只不过试了几个月之后，CashFiesta让我常常为了要成为黄金会员而伤神(一般人1，
000点换0.001美元，黄金会员1，
000点则可换1.66美元)，而且因为注册Special
Offer的缘故，
信箱内常常被垃圾信塞爆，感觉真的很糟！
看到这里，不知道你是不是也心动了呢？如果你愿意尝试，请跟着我做，让我带你找到更轻松的网络赚钱术
!

第一部分是:填写基本数据，以便网站以后能将薪资支票寄送到你手上：

*Salutation(称呼)：Mr.(先生)、Mrs.(太太)、Ms.(小姐)
*First Name(名)
*Last Name(姓)：
*Mailing
Address(收支票的地址)：用英文（可以用拼音，按外国人习惯，从小到大写清楚，至少要中国的邮递员明白。

例如：广东省广州市珠吉路，可写成：zhuji
road，guangzhou，guangdong prov.）
*City
(城市)：从上面的邮寄地址提取，按乡，县，市顺序填入即可。

*State or Province (省、州或郡)：台湾的朋友就打Taiwan。
*Postal Code
(邮政编码)：邮寄地址查询时候就会一起提供。
*Country (国家)：这不用教吧！
*E-mail Address(电子邮件地址)
*Please confirm your e-mail address
(请再输输入一遍你的电子邮件地址)

第二部分是会员调查(Member Survey)，
这部分你可以不予回答(No
Comment)，直接跳过，或是自由填写：

*Age(年龄)
*Education(教育程度)
*Employment(职业)
*Yearly Salaries(年收入)
*Marital status(婚姻状况)
*Family members(家庭成员数目)
*Computer location(计算机位置)
*Have you ever made a purchase on-line？(是否曾网络购物？)
*How many hours do you typically spend on the web in a
month？(每个月上网时数？)

第三部份是要选择自己的使用账号、密码及介绍人回馈方案，记住，这部份的数据只要登录之后就无法再做变更，请审慎考虑再做决定：

*Select a referral
system(选择介绍人回馈方案)：这个部分非常、非常重要，请耐心看过我的分析再做决定！

A - you 60 points + 7 levels: 10， 8， 7， 6， 5， 2， 2 points /
h
B - you 60 points +7 levels: 5， 6， 7， 8， 9， 10， 11 points /
h
C - you 60 points +7 levels: 20， 2， 2， 2， 2， 2， 2 points /
h
(举例来说，A方案是指当你自己上线1小时可获得60点，而你的第一层下线每上线1小时，你就可获得10点的红利回馈，第二层下线上线1小时，则可获得8点的回馈，之后依7，
6， 5， 2.
2点的次序类推；B方案、C方案也都是类似的道理！)
那么该如何决定要选择何种方案呢？根据我的建议假使你打算长期投入这份，且希望在过一段时间之后获得较大的收益，B方案会是你比较好的选择。假使你希望可以快一点点见到成效，A方案则是可以优先考虑的。至于部份选择C方案的，除非你认为往后介绍的朋友几乎不可能再介绍其它人参与这份工作

*Select a Partner ID(选择使用账号)：限定要英文5
-12字符。
*Select a password(选择密码)：限定要英文5 -12字符。
*Retype the password to confirm it(再次输入密码以确认)
*please tell us how you heard about
us？(在哪里获知CashSpace的？)

第四部份是填写介绍人：

*Referral
Info(推荐人)：网站规定如果加入时介绍人字段留白的话，该会员则不享有下线回馈制度，也就是说未来你就只能孤军奋战了！所以，请你千万要检视一下字段是不是填着chouwei
待上述数据都填写完毕之后，按Become a Member
(成为会员)即完成申请。

基本使用说明:
申请完毕后，你会收到来自CashSpace的确认邮件，邮件中有你的会员基本数据，你可以从信件上的链接进入CashSpace网站
(http://www.cashspace.com/
)，当然如果你心急不一定要等到邮件可以直接去CashSpace网站，并于网页左侧Download处先行下载广告播放程序(内

有两个下载点，一为原始程序，另一则为压缩档)，待下载完成，执行该程序，登入后即可开始赚钱。加入完后..
会开几个网站的，不用管，关闭就可。

累计点数的方法:打开cashspace
的软件就行了。到了24000点数就你写上的地址里会邮来400美金的支票。支票去中国银行兑换就可以了。

推荐下线的方法：（被推荐的方法一定要记得了）把您加入的网页链接的最后部分改成你的有效ID（有效ID在你加入后即生成）。如您的有效ID是******
的话，把本文章里的加入链接改成
http://www.cashspace.com/signup.asp?refID=******
这样就可以了。然后像我一样把这篇文章复制了以后到多个网站里粘贴就可以了，多贴贴。您努力的话，会在很短的时间内踏上成为富翁的路。

另外，要特别注意几件事：
第一、当漩涡状图样亮起时才算上线，若遇图样暗下时，仅需以鼠标光标由上网下晃过漩涡状图样即可恢复亮起。

第二、鼠标光标不可越过漩涡上符号的水平位置，否则将呈现离线状态。

第三、当你想关掉时记得一定要 shut down
，不然不会积分的哦。
你可以把广告条放在桌面的最上面。请记住，这一切都是免费的！！！

建议大家拿到美金后，
去中国银行换就可以了，选择存入账户比较划算，因为现在外币(尤其是美金)存款利率很高，当你拿到中国银行存款一本通时，上面写着币种:USD^^，心情是可想而知的!!!
工作二三四十年，月薪不过一两千。省吃俭用几十年，买个套房还借钱。

其实你每天只要做到以下两点：
第一、平均每天上网不低于3小时；
第二、每天在各网站上贴5个以上的贴子（见网站就贴，网站人气越高越好）；那么两个月以后你会有意想不到的收获！如果连这两点都做不到，那这辈子恐怕什么也不用做了！

I'm looking for a President Jackson, but apparently they are getting hard to find. I had one back around 1990 and thought it was a great radio, and would like to have another one to compliment my 2510.
If anyone knows where I could find these radio's let me know.
Other then Ebay, I found one on there, but it has the black face plate, mine had the silver face plate.
thnx

Jay,
For those of us not in LA, how about providing a thorough analysis of the swap meet, including the exact location and time of operation, the good stuff, the bad stuff, the weirdos, and the geeks. I grew up in the city but haven't lived there for 30 years. Maybe one day I can get back and tailor the trip around the meet. This is one of the longest standing electronic meets in the nation.

It depends on how bad the match is. There is a good chance that you'll
be OK. It takes a match of perhaps 5:1 or worse to overheat the
transmit output transistor in most CBs.

My problem is that I'll be moving from truck to truck so I wont have
time to set the SWR correctly. Most of our trucks have factory installed
double antenna's which I'm not too thrilled about.

driver42:

SWR IS controlled by the antenna and feedline, if you company has installed these, they should have had someone set it up which has already adjusted all of that.

The output of your radio expects a 50 ohm load, "tuning the antenna" means that the antenna and feedline has been adjusted correctly to present this load to your radio, if they have done their job correctly.

In other words, if the person installing, tuning the antenna and feedline has properly adjusted it to present a 50 ohm load ANY RADIO should now be able to hooked up to it with no problems and a low SWR.

I suspect you are good to go...

If you're using a stock unmodified radio, there will be no
worries about a less then optimal antenna. If you're using
a racecar CB that's maxxed out, then you have to worry about
reflections from the antenna.

Remember that a dummy load has perfect SWR. You won't transmit
anywhere with that. 1:1 SWR and resonance aren't always the same.

I much prefer resonance over an artificially perfect SWR.

driver42:

If you really want to know exactly that the swr is ok, get a "SWR Meter." You may still be able to get one from any radio shack, off ebay, or the radio shop at a truck stop. They range in price for 9.99 to 29.99 and up, and are simple to use and come with instructions. You may wish to have someone show you how to use one, which has used one before. If you get it at radio shack or a radio shop, a guy there should be able to quickly get you up to speed in their usage...

Good luck...

Thanks for your input. I dont want a "big" radio. I just want a quality
radio. I'm looking at either the PC68ELITE or the PC78ELITE both from
Uniden. I had a PC68 about ten years ago that I had tweeked and it was a

great unit. I was just on a CB site and I seen that they sell a box that lets you set the SWR from your seat without touching the antenna. The box is plugged inbetween your radio and antenna and then you just use your SWR meter plus the knobs on the box to adjust to the desired level that you want. Are these things any good or are they a gimmick?
Thanks,
Driver42

2343. FREE! "THE CB EPROM DATA BOOK" OF FREQ. MODS

Newsgroup: rec.radio.cb
Date: 2005-07-30 21:52:19 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <hktne113mfg3d1jpp3n1vtn7ei42uh4imb@4ax.com>
Source record: 203230

FREE!!

For advanced techs and serious radio hobbyists, we're now offering a FREE copy of our previously published "CB EPROM DATA BOOK" by Martin Pickering. (EPROM = Erasable Programmable Read Only Memory.) We sold it for many years but it's now out of print. This little manual of 60 illustrated pages is an absolute GEM of CB technical knowledge you'll just never find anywhere else. And it's yours for FREE from our Web site.

This book reveals the secrets of advanced channel programming, and picks up where our "CB PLL DATA BOOK" (www.cbcintl.com/pllbook.htm) leaves off. You'll get a thorough background in how these amazing programmable chips can be used to modify many popular CB PLL circuits for expanded frequency coverage. Covers the basic programming techniques, and even includes real PC board artwork for making EPROM circuits. Sample artwork includes EPROM boards for the popular MB8719, PLL02A, ï¿½PD2824, and ï¿½PD858 PLL circuits.

Best of all, the price is right--namely, FREE! Download your FREE copy of "THE CB EPROM DATA BOOK" (948 KB Adobe PDF) at:

www.cbcintl.com/docs/EpromBook.htm

Don't forget to check out all our other CB specialty books, plans, kits, & high-performance accessories at:

www.cbcintl.com

SAVE MONEY! We regularly run EBAY auctions in which you can save up to HALF the cost of our most popular CB books and accessories. To see what's currently on sale, double-click the line below:

2346. CB REPAIR & MODIFICATION BOOKS AT 40% OFF

Newsgroup: rec.radio.cb
Date: 2005-07-30 21:52:33 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <uktne1din4opscclkbnih4qdncbrondh0h@4ax.com>
Source record: 203231

To learn the technical TRUTH about CB Radio without all the hype from people who are just plain ignorant, check out the following books from CBC International. They're selling right now at a big discounts on our EBAY & AMAZON stores too.

Check it out!

To see exactly what these books look like, plus all the specific, chapter-by-chapter details, see our Web at:

www.cbcintl.com

Some of the books included are:

BOOK #1: THE "SCREWDRIVER EXPERT'S" GUIDE To Peaking Out & Repairing CB Radios. List $25. The most popular "big dummy's" guide ever published on do-it-yourself CB repairs & modifications. Covers peaking of receivers, transmitters, modulation, mike problems, antenna & SWR problems, detailed frequency modifications for both crystal & PLL radios. Loaded with charts, illustrations, and specific instructions for most brands including the new export models. This latest edition also covers slider and broadbanding tricks, FM conversions, and much more!

BOOK #2: THE CB PLL DATA BOOK. List $20. The only complete reference source on CB PLL synthesizer circuits ever published! Detailed PLL theory explained in layman's terms. How they work, and how to modify them for many more channels. Includes specific PLL block mixing diagrams, truth charts, & IC pin function diagrams for nearly every PLL chip ever used. Covers all the most popular U.S. & export chassis, with specific listings of all models using the chip.

BOOK #3: UNDERSTANDING & REPAIRING CB RADIOS. List $42. Giant 370-page technical book for the professional repairman. Picks up where the "SCREWDRIVER EXPERT'S" GUIDE leaves off. Includes circuit descriptions & troubleshooting guide for 23- & 40-Ch., crystal & PLL, solid-state & tube, AM, FM, SSB, CW, American & export models. Covers test equipment (& where to find it), transistor basics, synthesizers, receivers, transmitters, power supplies, T/R switching, antennas, interference, parts & accessory sources. Over 350 illustrations including schematics, charts, and photos. Huge subject index also lets you look up repairs by symptoms. This is "must" reading for any serious CB technician!

For details on our Galaxy-Ranger Service Manual (2nd Ed.) go to:

www.cbcintl.com/galaxy.htm

Lou:

You might be moving a bit too fast...

The new hams (CB'ers entering the hobby) may find that very useful, as they convert their 11 meter equip to 10! Probably missing some sales there buddy!

John

John,

I just was reading about this radio.
http://www.galaxyradios.com/cb/959.html
says it has an "Automatic SWR Circuit (no complicated calibration
procedure)" Does that mean the circuit sets the SWR automatically?
Thanks for your help

driver42:

Yep. Flip of a switch and you can read the swr... flip the switch back, and you
are back where you started...

... couldn't be easier ...

But to use a real swr meter:

1) hook it in coax...
2) switch a switch to read forward power
3) adjust knob to full scale mark
4) flip switch to "swr" and read the swr

... as you can see, not all that difficult!

all you need is the meter and a short piece of coax (foot or two long) with
pl259 plugs on each end and you are in business...

... but, whatever suits you best...

Hello Gary:

Ok good deal Gray will do.....

The TRW Swap Meet has been there since I can remember, a long time. I started going in the 70's to 80's area in time. It is held the last Saturday of the month come rain or shine.

It is located at the TRW Plant, and is held in a very large parking lot. I thinks its in Manchester Ca, near the LAX Airport. I come in going south on the 405 Freeway, getting off at Roseincrants, going west, then turning left onto Aviation, at the big train bridge, then just follow all the others with antennas on their cars.

Some guys complain that that they don't sell radio gear there anymore being replaced by dealers selling computer stuff, games, and other none radio related stuff. But there always good radio tuff there, always.

It was a mob there today, I got there at 7:30AM, driving for a couple of hours. The Parking lot was never this full in a long long time. I had to park about a 1/4 mile away from the SWap Meet Entrance, not to bad.

There a couple of vendors there selling Hot Dogs and Hamburgers, donuts, pop corn, and whatever else you would want. I just get a cup of coffee.

Its always a a blast to go down with a bunch of guys in a large car of truck, or even a van. Don't bother bring your HT it will be jammed, or you will not be answered. The boys in the band will not allow you talk or shoot skip, your attention will be with the group of rabid fellow radio enthusiasts. A S.S.S.S. Trait, (Seven Six Secret Service)

Some have brought HT's to stay in touch, its a good idea if someone runs into something were looking for.

Theres always something really old and neat to look at, or is brought to show and share with everyone. They had this old WWII Direction Finder, had a tri-pod, had bithched compass that indicated where the antenna was pointed. And looked great. I wanted to have for a decoration in my doorway coming into the house.

Many guys there have a little generator running so that the radio equipment for sale can be checked out and verified thats its all working.

I always like seeing the guys cart off large transmitters, linear amplifiers, parts and pieces, transformers and all that stuff. Some have kids wagons that cart off the big stuff. You can drive up to the edge of the swap meet to load up your heavy gear there pretty nice about that. They even help ya load the heavy stuff on your truck.

The local Zoo repeater 147.435 is always a blast to listen to, while looking over the goods of the swap meet. Some even talk there on the output as not to miss anything being said on the repeater.

Some of the guys selling the stuff get mad at the guys who fondly there equipment for sale. One vendor there had a can of spray disinfectant, and put a label on it saying "For Fat hams that don't bath" I wish I had a picture of that!

Everything I have bought there worked. Or if it was expensive they would write a recite, and give you their business card, should there be any problems. Good businessmen.

Then of course after a long day of looking over the tables and all the stuff for sale, they close the swap meet at 11 AM, its time to hit the local "Nice Restaurant" for a big TRW Swap Meet Breakfast, with all those guys who have been jamming you all day long.

Sometimes the restaurant has to put tables together to seat us all, again its a blast. Good thing that don't serve beer in the mornings. After a power breakfast then its time for the what was bought and for how munch. Then if you didn't find what you where looking for there is always Juns, or HRO that we can go to get what is needed.

When you finally get home, its time to fire up what was bought and test it out.

I have had many great times at the TRW Swap Meet.

Jay in the Mojave

>says it has an "Automatic SWR Circuit (no complicated calibration
>procedure)" Does that mean the circuit sets the SWR automatically?

No. It means that it will read the SWR ratio without you having to
manually calibrate the meter. It does not correct the problem if there
is one.

If you move the radio from location to location just check the
reading. If it's 2:1 or lower don't worry about it.

driver:

I should have mentioned, you have to have the mike keyed while reading the swr
in the first situation (the galaxie)

and, keyed when "adjusting the knob for full scale" and again after flipped to
"swr" to read it...

... you might have already guessed that... either way, it is NOTHING
complicated or to be afraid of...

The other poster is correct, NOTHING will set the SWR automatically for you,
that is always an adjustment of the antenna and/or feedline, sorry about that!

John

Thanks,
I have an SWR meter from radio shack that I've used in the past. I know how to use it. My problem is that I'll be in a different truck everyday and wont be able to set the SWR the way I want to. On Monday I'm gonna call the cb shop that I saw online and ask them about the SWR match box. Below is a cut and paste of this product. Let me know if this will set the SWR without having to mess with the antenna's.

"Don't "Live with" High SWR Readings! This Matcher will tune your SWR very low, simply insert inline between radio & Antenna. Has 2 Adjustment knobs. Perfect for Radios with wide channel coverage, indoor antennas, non-tunable mobile antennas, or for using 10 thru 12 meters off 1 antenna. Handles 80w pep. Requires either an SWR meter built into radio, or an optional SWR meter between Radio & Matcher."

Don't be anal about SWR. If you have an SWR of between 1.5 to 2,
don't worry about it. If you must have 1.0:1 on every channel,
you'll need a tuner to "fix" it. SWR is a ratio of impedance.
It is only one of a multitude of important parameters. I like high
field strength. It shows you how well your antenna is radiating.

This is a line flattener. They can be problematic in that one of the
knobs can be bumped and give you an abnormally high SWR reading.
Much higher than the antenna itself.

You also will double the possibility of a loose coax connector, and
don't forget that moving the setup will require more time and care.

driver42:

Yes, such a device will allow you to adjust the swr under adverse conditions and is good to have, at least if the swr is high you can adjust it down and use the darn radio--now that beats sitting there with a darn useless setup!!!

Since you can voice your concerns, and have awareness that swr is important--I take it for granted you have the common sense how to read instructions properly and use it--if not, someone which knows how should be consulted--some of those truckers are savvy to swr and such, if not, large truck stops always have a radio shop close, or usually do...

So, I'd give a thumbs up to the matchbox (use in combination with your SWR meter)... there is some "insertion loss" from the matchbox, and a bit of a power loss, this is almost always negligible and not enough to worry about--just make sure you don't run a linear into it, that match box says it will handle 80 watts pep (that is only about 55 watts rms) so don't burn it up AND the radio/linear!!! (you could use a 50 watt linear, or less, with it safely, or have BIG finals in your cb which puts out 50 or less watts.)

Hope all of this helps and I didn't get too "wordy."

John

>This is a line flattener.

....oh brother, more voodoo CB terminology.

If the line has standing waves on it then it isn't flat, and no
matching device on the radio end can reduce or eliminate the line-load
mismatch causing the standing waves. The only "line flattener" is a
LOAD impedance that matches the LINE impedance. You can't do that at
the radio.

> They can be problematic in that one of the
>knobs can be bumped and give you an abnormally high SWR reading.
>Much higher than the antenna itself.

Or the antenna can hit a tree and fall off, or the coax could get
jammed in the door, or the radio's power leads could be accidently
shorted by a sharp edge under the dash.......

>You also will double the possibility of a loose coax connector, and
>don't forget that moving the setup will require more time and care.

Oh, the turmoil of it all! So why even bother using the CB in the
first place if there's going to be the possibility of a problem? If

you want to discourage the guy from using a matching device then at least give him some -valid- reasons. Like, you probably won't notice any difference if the SWR is 3:1 and not 1:1, or that the importance of SWR is moot when compared to field strength, or that any matching device isn't going to accomplish squat with a cigarette-lighter radio and a mag-mount antenna.

This isn't exactly a performance rig, and the fact is that SWR isn't going to tell you anything -- if you manage to get it to 1:1 you'll get a warm-fuzzy, but that's about it. Just plug it in and talk. If someone hears you, great. If they don't, there's probably nothing you can do short of a full and proper install that will get you heard.

It guarantees nothing of the sort, since any improvement is marginal
at best..... more than likely he wouldn't notice the difference in a
blind comparison. What he -will- notice is that his bandwidth is now
more limited (actually -increasing- SWR on the high and low end of the
band) because those matchboxes make pretty good preselectors.

>Any sensible person knows it is a no brainer...

Any sensible person would want to know if he's wasting his money on a
gimmick that sounds good in theory (and marketing) but does little or
nothing for his intended application.

>He doesn't want to get a damn engineering degree, he wants to use it...

Maybe you missed this part:

Never be Lonely again!!!

Try out Skype its pretty good similar to a High Quality Mobile Phone Call,

You can conference call with up to 4 other people too.

www.skype.com for free software

www.vskype.com for videoconferencing this is currently in Beta at the moment.

rates global calling ordinary landlines are just 1.1 pence UK sterling per minute

Calls to other Skype users are FREE this service beats Yahoo Voice chat for quality.

You will need a headset mic try www.skypeheadsets.com

Or Ebay searching under Skype for a bargain telephone around 11-00 sterling including P@P shipping

Ideal for calling other CBers!

Much Love

Sandra28

Try http://www.mobilegear.us/ if your in the USA

tnom:

Yep, I always worry about terminology...
It will allow you to tune the antenna/coax from a 5:1 to a 1:1 and run your transceiver into it--WITHOUT BURNING OUT THE FINALS.

The fact that, that is better than replacing finals on a daily basis may not appeal to some--they can chose to NOT use one and burn out their finals, daily, if they chose...

Better yet, he can drop into the radio shop on board a truck stop, explain he does not have time, or the permission of the truck owners to start revamping their antennas and coax--I am sure the tech will see it as a no-brainer--RUN A MATCH BOX!

Hey, it is america, you can take your choice...

John

Why don't you google "bird watts"? You'll get more hits than "line
flattener".

Such a remark doesn't mean much coming from someone who built and sold
hacked amps that he claimed were "linear" but were biased Class C,
then defends his ignorance by claiming that linearity isn't required.
BTW, who let you out of your cage?

Guess what, John: Most of the finals used in CB radios today (and for
the past 20+ years) can withstand SWR of 30:1 indefinitely. And that
includes the power transistors used in amps, too.

>The fact that, that is better than replacing finals on a daily basis may not
>appeal to some--they can chose to NOT use one and burn out their finals, daily,
>if they chose...

Resorting to scare tactics? Gee, I don't use a matchbox and the final
in my rig is just fine. In fact, I've -never- blown a final except for
once when the coax connector on the radio end was shorted, but I don't
think a matchbox would have fixed that problem..... do you?

>Better yet, he can drop into the radio shop on board a truck stop, explain he
>does not have time, or the permission of the truck owners to start revamping
>their antennas and coax--

Why stop there? Tell him the -truth-, John: If he doesn't run a
matchbox he'll have to hire an engineer at $200/hr to locate the
optimum location on the truck for the antenna, reinstall the whole
system, tune it up with his $20k HP comm analyzer, etc.....

Judas Priest, it's just a CB radio! Just plug it in and talk!

>I am sure the tech will see it as a no-brainer--RUN A
>MATCH BOX!

Once again there's that phrase most favored by those who can't make a
logical argument: "It's a no-brainer". Well, since the CB was first
established over 45 years ago the overwhelming majority of CBers have
run their rigs -WITHOUT- a matchbox and they worked just fine. Sorry,
it's not a "no-brainer", but it's about as close as you can get. And
if -you- can't figure it out then apparently a "no-brainer" is beyond
your level of comprehension.

Where was I corrected? You posted links to devices that -are- line
flatteners; i.e, they convert signal impedance to the characteristic
impedance of the transmission line. But the topic of -this- discussion

is a cheap little box that does nothing more than tune a conjugate match. The difference is that a line flattener eliminates standing waves on the line. This matchbox does nothing of the sort. It just tunes out any reactance in the signal so the radio doesn't notice the standing waves. Any line-load mismatch still exists, as does the reflected power on the line. By definition, it does -not- 'flatten' the line. It is not a line flattener. In your own words, "you need to check your facts before you start posturing and posting. You end up looking like a fool when you're corrected."

Frank:

I will put it in simple words for you:

"We don't give a damn what they call a "match box"/"line flattener."!

Just think of it as a device to keep you from cooking the finals!
They work well for that purpose!

John

And that's why there is so much CB mythology -- terminology born of
ignorance -- floating around and confusing people that are new to the
hobby. It's great for voodoo techs who make gobs of money by selling
worthless gimmicks and trashing good radios with "swang" mods, but
what do you care? You don't give a damn.

>Just think of it as a device to keep you from cooking the finals!
>They work well for that purpose!

Hundreds of thousands (probably millions) of CB radios in circulation
that work just fine without a matchbox and have never "cooked" their
finals. I'm absolutely positive that many of them have been hooked up
to antennas that weren't exactly perfect, have been run with high SWR,
and generally well abused. Yet despite your assertion that this guy is
going to blow his final without a matchbox, all of those radios still
work.

This concept is so simple it can be understood by an autistic turnip.
So what's -your- excuse?

>John

That's where your opinions belong.

I'll spell it out for you.................

You said the term "Line Flattener" was "more voodoo CB terminology"

All one has to do to disprove your claim is search for "Line
Flattener" The results show that all references to the term "Line
Flattener" are not CB related or voodoo.

You were just corrected.

Well, Ok, if you say so, tnom. It's not like CB mythology isn't full
of valid terminology used improperly like "common-mode currents",
"circular polarization", or using PEP to measure AM power. But if you
really want to harp on semantics I'll give you your day in the sun....
but wait! You said you "aren't very concerned with semantics"! Aw, too
bad, tnom -- you just proved yourself to be a hypocrite......again.

Yes, I already knew that, Brian. I tried to turn you onto the right
path years ago when you were hacking basic Motorola AN circuits that
were intended to be starting designs for engineers, not finished
products to be built by CB ampheads. But you were just too impatient
to get your "product" sold and get your share of that illegal market.
After damage control backfired in your face (because of your lack of
education) you vanished. Now you pop back up to spam the group every
time you think you have an improvement. You haven't made very many
changes, but look at the ones you -did- make -- all were suggestions
that I made when I told you all the reasons your amp sucked. Maybe you
learned those things from me or maybe somewhere else, but I was right
and you know it.

But feel free if you want to make more smart-assed remarks about my
education and experience -- it's not like I expect you to be grateful
or something. After all, you're just in this for the money.

Professor:

What transistors are you using in your leen-e-air?

I have a texas modulator which I loaned out and the guy cooked it, it is dead on xmit, I need a replacement--when I get a chance, I will open it up and get a part number.

You got one (transistor) I could buy and solder in myself? You familiar with it--"Texas Modulator", or need the PN off the transistor(s)?

John

Geez fellas... I didnt mean to start a war here. I'm just a truck driver
that wants to do things as right as I can given my situation with pretty
much having a different truck everyday. After reading through this entire
thread I think I'm even more confused :-) so here's what I'm gonna do. I
will call a few of these cb shops that I've seen on the web and ask them
for their advise and explain to them my circumstances of wanting a good
high quality radio "no amp or stupid toys that make noise" and telling them
that I'll be in a different truck and wont be able to set the SWR and ask
them what would be a good setup for me. One last question for you all that
have been helpful. Can you give me a few sites to good internet dealers
since there arent any physical shops left in my area anymore?
Thanks again for your help guys.

Sounds familiar but can't recall any specifics. Occasionally used to communicate with several stations in the Chicagoland area late sixties to mid seventies on my Dad's old Johnson Ranger. I would catch heck for broadcasting out of band, he was an old key jockey who got his amateur ticket in the Navy. Allot of the AM traffic at the time was on the RC channels especially from the Midwest.

driver42:

I would replace the term you are using "set the swr", with "adjust the antenna for low or lowest swr."

For example, you question might be stated as, "I will not be able to adjust the antenna for a match and low SWR--and will have to use it as it is, so will a match box allow me to still operate my radio into the antenna, no matter if the swr is low, or not?"

You can ask this same question in rec.radio.amateur.antenna, however, they refer to a "match box" as an "L-Match", same thing in most cases, however there are different types of "match boxes", some balanced, some unbalanced, since you are using coax, you will be using an unbalanced one (ALL cb "match boxes" will be "unbalanced")

So, if in rec.radio.amateur.antenna you ask, "Can I use a "L-Match" to lower the SWR into an antenna which I cannot physically adjust, but is cut for the right frequency?" You will begin another debate there. <grin>

But, if you think you are confused here, you will even be more confused there. They will start laying technical terms on you faster than a pervert can come up with lollipops for the kids! And, the hair splitting over semantics, syntax and terms will spin your head!

However, after you chat with the shop techs, please, report back on your findings for others who might post the same question... thanks in advance...

Warmest regards,
John

>thread I think I'm even more confused :-)

First rule: Avoid any gimmicks or modifications that claim to give you
some profound increase in performance. It doesn't work that way. The
laws of physics dictate that there are only two ways to significantly
improve your performance: use a bigger antenna and/or use more power.
Leave the gadgets and gizmos for the neurotics that want to squeeze
every last milliwatt from their radios (and the morons who like to
watch meter needles bounce).

Second rule: Practically all CB radios are the same in that they have
an output impedance of 50 ohms. This means that the antennas which are
installed on these trucks are most likely -already- adjusted for best
SWR to a 50-ohm radio, and will therefore work just fine with -any- CB
radio you choose to buy, matchbox or not.

Third rule: Don't pray to the SWR god. A dummy load will give you an
SWR of 1:1 but it doesn't make a very good antenna. Your antenna is
best tuned with a field strength meter, and many times the best field
strength does -not- coincide with best SWR. If the radio you choose
has an SWR meter included, great. Think of it as a go/no-go meter:
below 3:1 and everything is fine; above 3:1 and you need to check for
a major malfunction like a disconnected cable, corroded connectors,
busted antenna, etc.

Forget the internet CB shops -- let your fingers do the walking and
contact one of your local commercial radio communication shops. They
do this stuff professionally, they will verify everything I have said,
and will give you the -straight- scoop instead of a bunch of CB
hocus-pocus designed to sell crap to nieve CBers like Brian does.

>Krist, the hams know more than you do!

Hams are, by definition, amateurs. Radio has been my -profession- for
about 25 years, including a BS in EE from EWU (including a minor in
communications). I worked as a BE for about 12 years, before that at a
radio comm shop (while going to college), and before that as a radio
tech in the USMC (MOS 2841). Nowdays I have my own part-time shop for
both radio and audio equipment, and do some bartending on the side
(better perks than any radio work!).

Oh yeah..... and I've been a CBer since I was about 10.

And if you have -any- doubts about what I am saying here then feel
free to browse the archives for this group and challenge me on any
technical issue on which I have commented and you think I'm wrong.
Otherwise, go troll some other newsgroup. Maybe some group under the
topic of assembly language since you claim to be a "wizard" at it. Or
we can discuss that topic here -- I'm fairly adept at writing my own
assembly subroutines, especially device drivers for automation control
and data aquisition (for custom interface cards that I also designed
myself).

So what'll it be, "John"?

Gee, more crystal ball gazing. Like -that- wasn't expected.

>However, they are absolute truth...

Truth is relative; facts are absolute. You have ignored the fact that
most CBers -don't- use a matchbox and their radios don't blow up.
Address the facts, not opinions that you claim to be the "truth".

> too bad you can't understand without
>someone having to strike you across the top of the head with a 2X4!

Finally, an ad baculum. Trolls like you usually threaten me after the
first two or three replies. So what took you so long?

This guy was feared among locals, as someone who was trying to lure people in, then bust them for being on these illegal frequencies. There were the obvious rumors, opinions, and you could never get the real story for sure. In those days, you had to be licensed, and the FCC was definitely busting people, so it was a matter of being safe instead of sorry. The COLONEL was someone who would talk to you, but gave you the creeps!

>Oh yeah..... and I've been a CBer since I was about 10.

You left out the whole truth. In addition to your one sided horn
blowing of above.....

1. At age 10 you decided that you were tired of being beat. You
learned to trick other kids into believing that you had a value other
than that of a punching bag. You accomplished this by starting to
go down a path of deceit that you continue to go down today.

2. At age 33 you decided you'd give up on girls. You continue to be
a virgin to this day. (not counting farm animals)

3. At the advent of the Internet you discovered that you could puff
up your low self esteem through a series of put down others to inflate
yourself posts. You quickly learned that the truth is not this issue.
All that matters is to make yourself look good. Just spew a bunch of
non related technical matter into a post and no one will be the wiser.

There are more. These are just the obvious ones. If others would like,
they can continue the list. It shouldn't be to difficult.

4.....

5.....

ect.

Blah, blah, blah. Stay on topic. Once again, where did he say he was
being "forced" to use any type of matching device? Where did he say
his SWR was 5:1? And why can't you address the fact that millions of
CBers don't use a matchbox yet don't blow their finals?

Let's try this again, but this time I'll seperate the issues so you
don't get confused:

1) Where did the original poster say he was being "forced" to use any
type of matching device?

2) Where did the original poster say his SWR was 5:1?

3) Since very few CBers use a matchbox, why don't the millions of
other CB radios have blown finals?

Now is -that- too hard for you to comprehend? You made the claims, now
back them up.

Well, let's find out just what he said, shall we?

=====
On Sat, 30 Jul 2005 11:45:50 -0500, driver42 <lyoons42@iwon.com> wrote
in <Xns96A381DBCBD35lyons42iwoncom@204.186.200.105>:

>Hi,
>If I'm not able to set the SWR in the trucks that I drive will it hurt the
>radio or just give me decreased range?
=====

I don't see anything about a 5:1 SWR.

I don't see anything about being "forced" to use a matching device.

Now is a good time to dispell more CB mythology: Many of you already
know that in order to double your range you need -four- times the
power. But it also works the other way -- if you reduce your power to
one fourth (i.e, you are losing 3/4 of your power, which would mean a
pretty high SWR) you have -only- decreased your range by one half. So
an SWR of 2:1 or 3:1 (or, conversely, squeezing a couple extra watts
with a tweak-n-peak) isn't going to have a noticable effect on your
range.

Let's continue with the scenario that you are losing 3 watts (3/4 of
your power) due purely to reflection. Ok, so that power gets dumped
back into the final where it's dissipated as heat. That's three extra
watts in a transistor conservatively rated to handle a certain amount
of -continuous- heat dissipation, which is usually something along the
lines of 4 watts. Mind you that 3 or 4 watts isn't a whole lot of
power; if the heat sink can handle 4 watts without a problem then an
extra 3 watts isn't exactly going to melt the knobs. Regardless, the
final -isn't- dissipating this heat continuously (unless the OP is one
of those asshole broadcast types that keys down for half an hour), so
normal operation certainly isn't going to "cook" the transistor. And I
already mentioned that these transistors are rated to handle 30:1 SWR

-continuously- without damage.

If you want proof of these FACTS then feel free to refer to the data sheets for the final transistors most commonly used in CB finals.

>double antenna's which I'm not too thrilled about.
=====

I don't see anything about a 5:1 SWR.

I don't see anything about being "forced" to use a matching device.

Looks to me like he said the trucks already have antennas installed. Assuming they are CB antennas, it's more than likely that the antennas have already been trimmed for use with a 50-ohm radio (since all CB radios are 50-ohm radios). Unless something is broke, the antennas are probably going to give a reasonably good match to -whatever- radio he picks (because, once again, all CB radios are 50-ohm radios).

=====
On Sat, 30 Jul 2005 21:33:43 -0500, driver42 <lyons42@iwon.com> wrote in <Xns96A3E583AB9BAlyons42iwoncom@204.186.200.105>:

>My problem is that I'll be in a different truck everyday and
>wont be able to set the SWR the way I want to.
=====

I don't see anything about a 5:1 SWR.

I don't see anything about being "forced" to use a matching device.

What I -do- see is concern about setting the SWR, which is another mythconception (and not just with CBers but with a lot of hams). A 1:1 SWR does -NOT- mean the antenna is operating at it's best efficiency. It -DOES- mean that the load is 50 ohms nonreactive. But a 50 ohm nonreactive load can be darn near anything: a carbon resistor, a dummy load, a bad coax working as a tuned stub, or even a corroded 9' whip with a mount caked in mud (seen both scenarios firsthand).

As I stated before, an SWR meter is a go/no-go meter. If it normally reads 2:1 then suddenly jumps to 6:1, that's a good indication that something has gone wrong with the antenna or coax. And -THAT'S- what an SWR meter is good for..... a "something's wrong" meter (IMO, they should probably be replaced with idiot lights like those in a car.)

If you want to tune your antenna for best efficiency you -NEED- to use a field strenght meter. Period.

Now..... once again.....

1) Where did the original poster say he was being "forced" to use any
type of matching device?

2) Where did the original poster say his SWR was 5:1?

3) Since very few CBers use a matchbox, why don't the millions of
other CB radios have blown finals?

Frank, to be fair, you must now finish this statement. Even at 3 watts, some of these tiny radios and chassis don't have enough mass to dissipate the heat that will be created by the miss-match. Sure, you can add a larger sink and forced air cooling, but stock, they won't take it. And it's never a bad idea to check the heat sink and mica insulator and replace the grease with Arctic Silver 5 or some comparable superior thermal compound. I lost an MRF477 due to improper installation by the manufacturer. The screw had been stripped and was not making proper contact with the heat sink, and that was with a reasonable SWR.

Of course, those republican members of Congress had nothing to with it.

>Of course the republican memebrs of

>congress were not in psotion to run for

>president of course,

You said "over the years". Of course there were republican members that
ran for president.

>but i choose to single

>thoose too out for specal attention

>and we are spending too much money playing
>catch up (as always happens when yuo try to

>play cath up on something like this)

>I voted for Bush, both of them because I felt

>they were better than the other choice

History proved you wrong on both counts.
There -was- no better choice this last time around. They were both
losers and most everyone knew it.

>.IYO and you are of course entitled to it

Thanks, but my opinion is shared by a great number of Americans, now.
Thing is, my opinion hasn't changed of Bush, but many American's who
voted for him, did change their opinion to that which resembles mine.

>I suspect i may end up voting for a 3rd Bush if

>the choice is between him and anybody

You won't get that chance. Jeb ruined himself with the Terry Schiavo issue here. And he said he isn't interested and specifically said he will not run. Of course, as soon as he flip-flop/lies and decides to run, I'm sure you would vote for him. For some peculiar reason, when a Bush lies, you make excuses.

>.might not Jeb is not my first choice for the

>GoP nodd

Then which Bush are you referring? Are you going to wait for Jeb Jr to run?

>but you never know in politics

True, especially when the election process is tainted by one side.

>can't tell you how many times I was told the

>GW did not stand a chance of being elected or
>then reelected

Your group said the same thing about Hillary in NY. I feel your pain,

_
Think of all those that would have been alive today if he wasn't elected. And when we DO pull out if Iraq, America will have lost many of their children, and history will judge Bush as the incompetent he is. Case in point....can you illustrate a single historian or example of one who maintains the Vietnam was a good thing? These "isms" (Communism, Terrorism) always manage to reek havoc on the poor intellect of certain repubs who drag their party down.

>I have seen sign of on the Dems side

What you have seen is the first woman
president and she scares the hell out of people like you who are going to made to pay their fair share once again.

>I hope not I was rather partail to Libby Dole,

>but mrs clinton doesn't scare me we have

>already seen 8 years of Mrs Clinton as

>president,

Her economic plan is all hers and unique in every way.
Think of it this way,,,if you think you already exprerienced 8 years of Hillary, then you have no surprises when she is elected. You would already kow the budget will be balanced and wars will not be waged on Intel conjured from policy.

>I do object to her end run arround the

>constitution though

But, of course, you have no objection when Bush does it, as long as you are told he is protecting you by doing so.
That he failed to stop additional terror attacks on our country since 911, not found WMDS, not captured BL, and made the world a more dangerous place for Americans around the globe, is irrelevant. Yet, those who are not clued on what is happening abroad, are content to play the ostrich here at home and blindly support Bush, no matter what...as long as another party isn't in office.

>and I was referring to whole potecail feild on

>the Dem side Kerry Clinton Gore a few others

You just made the claim history should not be consulted and we should focus on the here and now.

>Speaking of FRS, I heard back in the late

>1980's that these frequencies were the anser

>to people's complaints about abusive behavior
>on the CB. That is, these new bands would

>not have skip,

Calling a natural occurring phenomenon (skip) "abusive" merely
illustrates your personal dislikes and tastes and is in no manner
indicative of what other people consider abusive. Skip, by itself, is no
more abusive than repeater function.

>and supposedly would hamper desires for

>power and obscene language.

How would no skip hamper desire for bigger power? There will always be
someone who needs to be king of the neighborhood, town, county, etc.

>Whether or not, I still think the CB bands were

>better, and

>more fun.

That's cause you can't freeband no more. Your voice is too easily
recognized and you can never go back.

> Yes, sadly the world reflects all

>communications,

Horseshit. "The world reflects all communications" is incomplete
structure and meaningless.
There are countless examples of why such is not true (smoke signals are
still used by tribes in New Guinea, as well as other examples). "All"
communications, at least in your example, is limited only to your
knowledge of what you consider communications in the US.

>morals and all, but what else can we do, but

>try and be positive.

You can do nothing. There will always be mere language that upsets the overly sensitive puritans who want to impose their censorship on others. In this country, you're up shit creek without a paddle..at least for the time being.
You're one of those who instead of changing the channel when something is on that offends you, you want it done away with. You have a long uphill battle.

>communications...

True for the modern mainstream methods of communications, not archaic hobbies like CB or CW.

>... this is why amateur radio is now being drug

>into the 2nd millennium, we have just gotten

>around to it...

>John

Amateur radio isn't being "drug" anywhere. On the contrary, it's barely surviving as a method of modern communications, with the sole exception of certain disasters which occasionally carry it to the news. The dropping of code is writing on the wall. The hobby is gasping for air and on its last legs.

I have yet to see a CB radio that couldn't handle a 3:1 SWR (unless it
was improperly installed, as you mention below). And I know that those
plastic Cobra 19's and those micro-Midlands can be keyed at a normal
duty cycle without -anything- hooked up to the antenna jack. Some of
the older radios are a bit fussy, especially those with the 2SC799.
But those are becoming quite rare -- probably for just that reason.
The 2SC2078 and other modern CB finals are solid transistors that are
pretty darn hard to blow, with or -without- a heatsink (the TO-220
case dissipates quite a bit of heat all by itself).

> And it's never a bad
>idea to check the heat sink and mica insulator and replace the grease with

I have seen a few Unidens with those thick, grey, rubber heat-sink insulators -- worthless crap like that shouldn't have even been installed at the factory. Another problem I've seen is amp junkies (audio and radio) who replace their own transistors and use -WAY- too much heat sink grease. They were never taught that it's only meant to fill the air gaps where there's no direct contact -- IOW, just a little dab'll do ya. But I will qualify my statement to say that the RF transistors are rated for continuous 30:1 SWR -only- when they have a sufficient heatsink.

Ain't that the truth! It's not magic, and like you said, it's only to fill the microscopic gaps. And to be honest, you can do a lot more by lapping the surfaces to make sure both surfaces are as flat as possible. This applies to all types of heat sink mating surfaces.

Too bad you don't like the extreme heat. One or another of the many stations here are always hiring, but then again, the doors are revolving types mostly at Clear Channel or the other scumbags and they own it all. We have one community radio station that has lasted over the years on donations and fundraisers. Tough to hold out when you're independent.

What kind of truck did you buy, now? You may have bought the wrong
kind of truck for the radio.

>LOL! Did Dave finally sell his boat?

That's what I was thinking, that he sold the boat and bought a new
truck.

Bush has hurt the republican party. Sucks too, 'cause the repubs, for the most part, are not the enemy. Bush is. I was a republican at one time, but I was never a democrat. There are some good repubs in the wings. McCain is compromised, though.

>No need to consult the past,

Sure there is, otherwise such wouldn't be mandatory requirement courses
found in institutions of higher learning. Indeed, there is a huge need
in which to consult the past among intellectuals. It's when one wishes
to argue history that self-confusion is born.

>it exists now, and

>will be the future...

How profound! If our society does not learn from history, many times we
are condemned to repeat the same mistakes.

>we all

>reflect the present state of society, and so

>does our methods of

>communications...

True for the modern mainstream methods of communications, not archaic
hobbies like CB or CW.

>... this is why amateur radio is now being drug

>into the 2nd millennium, we have just gotten

>around to it...

>John

Amateur radio isn't being "drug" anywhere. On the contrary, it's barely
surviving as a method of modern communications, with the sole exception
of certain disasters which occasionally carry it to the news. The
dropping of code is writing on the wall. The hobby is gasping for air
and on its last legs.

He'll either leave, lurk, or start posting under another alias. It's
too bad that some people have to be like that because I'm sure they
could make positive contributions to the group. Even Dave had a lot of
helpful advice; he just couldn't accept that sometimes he was wrong,
which doesn't make a lot of sense to me since it's so easy to verify
your facts -before- you post your opinions. But I'm sure he will be
back..... when he's finished sulking.

> You definitely aren't

I'll try this one more time. You will need to focus -REALLY- hard
because this is probably going to be explained on a temporal level
with which you are unfamiliar: logic. Are you ready? Ok, here we
go.....

Fact: Somebody already installed the antennas and coax in the trucks.

Fact: Most people who install antenna systems adjust them for the best
impedance match to their radios.

Now just in case you are worried about the word "most", here are a
couple things to consider: If the antennas and coax are -not- adjusted
for a very good match then the other drivers of these trucks would
have blown -their- finals already (according to your "truth") and
would have either complained or fixed the problem. And since a company
owns the trucks, the antennas and the coax, and apparently wants the
drivers to use CB radios while driving, it's very likely that the
company checked the antenna systems so as to make sure they actually
work and not blow up the drivers' radios. This seems plausible because
if company equipment is defective they could be liable for the cost to
repair or replace the driver's CB radio. Even in a worst-case scenario
where the antenna systems were defective and blew up CB radios all the
time, not only is there something fundamentally wrong with the antenna
systems that no matchbox is going to fix, but someone is bound to warn
him that he should -not- plug his radio into the truck's antenna. So
in all probability.....

Conclusion: The antenna systems on these trucks have been adjusted for
the best impedance match to a CB radio.

Now hold on tight because this is where it all comes together.....

Fact: All CB radios are designed for a load impedance of 50 ohms. From
this fact you can draw two conclusions:

Conclusion #1: A CB radio with a load impedance of 50 ohms was used to
adjust the antenna systems in the trucks for the best impedance match.

Conclusion #2: Any CB radio the original poster uses is going to have
a load impedance of 50 ohms.

And those two conclusions lead to one FINAL conclusion: The antennas
and coax are -already- adjusted for the best impedance match to -any-
CB radio the original poster might use.

Bottom line: He's not going to blow up his radio if he doesn't use a
matchbox.

Now feel free to go back to your troll routine of calling me a "fool",
an "idiot", a "ma'roon" and a "brain-dead whacko", because you just
earned your place in the killfile.

Frank... the point you're missing is that although it's like you say "All CB radios are designed for a load impedance of 50 ohms."... there are certainly different reactances (j factor) from radio to radio. No radio or antenna is exactly 50 +j0. This is where the matchbox can help to supply the conjugate needed for maximum performance.

A matchbox only fools the transmitter into thinking it sees a proper
load. It does nothing for the standing waves that already exist on the
coax. It does not improve antenna performance.

At the device's rated power, voltage and current. Exceeding that rated
power, or voltage or current of the device will not guarentee that
device will withstand all SWR up to 30:1 indefinitely.

SWR alone will not destroy a bipolar transistor unless it is operated
outside the Safe Operating Area. The weakest part of a bipolar
transistor is the base emitter junction. Abuse that juntion and the
transistor will not forgive you.

I would venture to say that nearly all CBs on the market if operated
at the legal power levels and within voltage and currnet levels will
handle SWRs well beyond 10:1. At those SWR levels, one will definitely
know that something is wrong with a remarked lost of receive signals.

Up to about 3:1 the loss in range is minimally discernable. After 3:1
you will notice some loss of receive in weak signals and some gradual
worseing of transmitt range as SWR get higher. This is due to less and
less power delivered to the antenna for radiation.

As for hurting the radio, if you haven't overly modified the original
design or operating the radio outside the specifications that it was
designed for, No. Disconnect the coax from the radio will do more
damage than a poor SWR.

Yep with protable pensionplans they don't have to contribute a much to
them and that is a big savings there.

I think the ghost of Adrew Carnegie is walking the halls of many
businesses to day. Whispering into CEOs ears saying contrtol costs and
profits will increase.

******

If we take the equation 50 + j0 ohms to be a 50 Ohm impedance then an
equation in this form, x + jy, will yield an infinite solution of
equatins where the magnitude of the impedance is 50 ohms.

Conversely 50 + j50 Ohms is not 50 Ohms impedance.

What does vary from radio to radio is the tuning of the output filter
and matching network. Still this variation is not much greater than
about 5%. That 5% variation will not alter the match between the radio
and the coax significantly.

Finally, SWR is not determined by the mismatch of the radio to the
coax. SWR is determined by the mismatch of impedance of the antenna to
that of the coax. SO variations of source mismatch play a relatively
small degradation in the system performance.

FCC enforcement was different then. I recall my Dad receiving notice that
his beam antenna exceeded height limitations by ten feet from the FCC. This
was around '73-'75. CB was in it's heyday without a myriad of foul mouthed
stations. I had QSL's from all forty-eight states using a Browning Mark III
and 5 element beam.

Since CB radios are calibrated at the factory to a 50 ohm nonreactive
dummy load, I find it highly unlikely that a CB radio is going to have
any significant reactance or variation from the designated impedance.

Now look up the word "conjugate" before you misuse it again.

I bought my first CB back in 1973 while traveling extensively on the US roads. Channel 19, as I recall, was the first contact then upon making a connection, shifted to some other channel. All truckers had them and it was a piece of cake to get travel information while rolling on the tar, pedal to the metal.

I will be on the road again between San Diego and San Bernardino, either I-15 or I-215 and am wondering if it would be worth the money to get another CB to learn traffic and road conditions in real-time? Or has everybody gone cellular?

CB is great for travel on the interstate! Channle 19 is still where you
need to listen.

I don't leave home without one.

They aren't very effective outside of interstates, since you have fewer
commercial drivers.

CB radio is alive and kicking. Channel 19 is still the unofficial
trucking channel, and that's where you will hear most info about road
conditions. Don't forget that channel 9 is for emergency traffic only.
Channel 6 is popular with people who run illegal amps and can get
pretty noisy, so don't expect anyone to hear you on that channel. The
higher channels (30 and up) are popular with sidebanders (SSB), and if
you are looking for intelligent conversation then get yourself an
SSB-capable CB radio. They are a little more expensive but still a lot
cheaper than a cell phone.

No need to be sorry.

He ran a Mark III, into a driver, into a some sort of Henry. He was fun to listen to when he'd get all hopped up on the moonshine. There were always rumors about him getting busted...and then he finally did get popped. He owned a hardware store, hence the nickname. He had the loudest/longest Browning ping I've ever heard and he was damn proud of it too.

It was in the early to late 70's.

If the train of thought is too difficult for you to remain on topic, we can discuss such limitations of yours you feel pertinent, but it's much more productive to focus on that of which you already claimed instead of running from it when corrected.

>ROFLOL!!!!

>John

This group has cleaned up rather nicely. The intellects among the group rarely argue among each other. In fact, your posts have insulted everyone who disagrees with you. What you misinterpret as arguing is but mere corrections being bestowed upon thee's learning process

"I AmnotGeorgeBush" <iamnotgeorge@webtv.net> wrote in message news:8747-42EEAABE-1080@storefull-3252.bay.webtv.net... From: assemblywizard@gmail.com (John Smith) iangb:

>No need to consult the past,

Sure there is, otherwise such wouldn't be mandatory requirement courses found in institutions of higher learning. Indeed, there is a huge need in which to consult the past among intellectuals. It's when one wishes to argue history that self-confusion is born.

>it exists now, and

>will be the future...

How profound! If our society does not learn from history, many times we are condemned to repeat the same mistakes.

>we all

>reflect the present state of society,

Including those tribes in New Guinea that still utilize smoke signals, eh? Nah,,,don't think so.

>and so

>does our methods of

>communications...

True for the modern mainstream methods of communications, not archaic hobbies like CB or CW.

>... this is why amateur radio is now being drug

>into the 2nd millennium, we have just gotten

>around to it...

>John

Amateur radio isn't being "drug" anywhere. On the contrary, it's barely surviving as a method of modern communications, with the sole exception of certain disasters which occasionally carry it to the news. The dropping of code is writing on the wall. The hobby is gasping for air and on its last legs.

Another easy way to quickly cut though all this BS, call up dealers, manufacturers and ask them if it will void the warranty if you consistently operate the rig into greater than a 3:1 SWR.

No reason to take the words of CB Dummies, ask the people who have to repair, replace and maintain the equip. Their word is the word of "God." Or else, you back it up with your pocketbook.

2520. The first echo box....

Newsgroup: rec.radio.cb
Date: 2005-08-03 03:37:50 UTC
From: Hochee Chunaka <skg19744@cybernerds.com>
Message-ID: <age0f1h7q7gqshts2vl47669hl7c4fh4od@4ax.com>
Source record: 203407

The first "echo box" I remember hearing on the CB was in early 1977. A guy calling himself "Wicker Bill" in Englewood, California came booming in via skip to the East Coast. He was using an analog tape loop. It sounded ten times better than the cheap reverbs of today. The second echo box I heard was when my 14 year old friend came on the air later in 1977 with tons of reverb type echo. I asked him what he was doing, and he said to come over and he would show me. When I arrived he had a tin metal trash can over top of his head, and he was holding his Realistic desk power mic up inside the trashcan with his head. It was hysterical to see. His entire head was enveloped by the trash can. I fell over laughing.

"John Smith" made it to my ignore list. When I reach one of "his" posts,
I change to sort by user and click all the dots next to that name.
I then switch back to thread view. There are a few others that deserve
this treatment as well. It cuts back the clutter in my newsreader!

Sounds neat! There was a guy in the Niles Michigan area, several years back, who went by "SUPERTRAMP". He ran so much power, he bled over onto the nearby state police radios! Needless to say, he was busted.

I guess everyone from every area has fond memories of CB'ers who were fun to listen to!

The first time I heard someone using a reverb or "echo box" was a guy
by the handle of Igor the Terrible from Fort Lonesome, Fl back around
1971.

He came on the air one Saturday night about midnight and boy did that
wake you up.

james

Sorry folks, but I simply had to cross-post this gem of
a posting from rec.radio.cb to the ham radio groups.
I can easily imagine some of the goofballs and kooks
I saw at a certain hamfest last week trying this on 75M
after reading this. *If you do guys, remember that a
good ole traditional METAL garbage can, like a trusty
galvanized Wheeling Mfgr Corp model, available at any
home depot for modest cost, would work FAR BETTER
than any of the Rubbermaid plastic model(s)* Also remember
that when you fart inside of a said can with the same propped
over your head down to your lower torso, the sounds produced
will be AMPLIFIED by a factor of twenty or so and you can
get a breath of 'fresh air' while you're at it.

GO FER IT BOYS !!!!!!!!!

My old college roommate's sister-in-law needs a DC Palomar 250 to put inline with her export ten meter radio. Anyone still keeping tabs on the prices of these things as single units? I know just a few years ago they were going for less than a bill. Email me if you want to make a quick sale or she can pick it up anywhere in the Atlanta metro-area.

Hahaha! Don't forget "Rubber Ducky". All those, and I would have tossed my rig out the window (and probably would have been fined for littering).

I passed General without studying. I kind of got lucky. Many questions carrried
over from Tech, and some of my Tech school experience helped.

Allot of truckers and CBers do not need any echo box, their head is empty so
it comes naturally.

The problem is... that an echo may sound cool... but it has a negative impact on speech intelligibility. The echo is a form of audio distortion.

Hey Professor didn't you know the worst it sounds the better they like it.
As you noted it has a negative impact on intelligibility, so how do you
have a
intelligible conversation with someone with no intelligence ? you screw up
the audio down to their level.

Hi Wayne,

You can still get plenty of info from CB while you travel. It is a good tool. You will find truckers are very willing to give you info and they are often on 15 thru 17, as well as 19, at least in Cali. !00 bucks can get you a servicable radio and Antenna. A Wilson or a K-40 are pretty much no-brainers as far as antennas go with Cobra, Midland, and Uniden being commen, reasonably low-cost (AM)radios. If you want to get a bit more sofisticated, you can pay another 50 bucks and get a sideband radio that will give you more options but wont really help you any more with your travel, if that's what you plan on using a radio for. Daytime communication is rough. You will find 19 might not be usable unless you're within a mile of another radio. Nightime is much different.

Good luck

Perhaps you should look to other forums that accommodate this gay agenda
you continually invoke which commands your infatuation.

> <frown>

Truth does that to those struggling with a sexual identity crisis.
Again, your wanton sexual deviations would be better served in another
forum. Images and thoughts of burly truckers with cb's somehow make you
feel all tingly and once that occurs, you simply can not control
yourself.

Wayne:

If it doesn't "get it", simply chuck in a 100 Watt+ linear behind it,
it'll get it, that mag mount antenna isn't really great, if you go a
linear make sure it will handle the power (I have used the emergency
radio antennas with a 100 watt linear and gotten away with it--anything
more may damage the antenna or linear), a better antenna would help both
xmit and recv.

I'm cleaning out some of my old cb stuff, so far I have
a palomar TX75 and a TX100, Turner expander 500 desk mic, President HR2510
with Turner plus 3 mic, bracket and power cable, radio looks and works well.

make a reasonable offer or trade and we'll talk

>the way it is.

Of course. No one has faulted you for your opinion, only your incompetences, your preference for talk about gays (which, in my personal opinion, makes you a homosexual), self-contradictions, and reducing yourself to insult in all your posts. Hey it's just the way it is!

>I am entitled to my personal opinion... others

>can make up their own mind.

Perhaps you should look to other forums that accommodate this gay agenda
you continually invoke which commands your infatuation.

><frown>

Truth does that to those struggling with a sexual identity crisis.
Again, your wanton sexual deviations would be better served in another
forum. Images and thoughts of burly truckers with cb's somehow make you
feel all tingly and once that occurs, you simply can not control
yourself.

I see. Considering his gay talk and repeat insult to everyone he
attempts to communicate with as "down to earth" and the one who corrects
him as "very far out there" is more than I can ask for. Please continue
with your floor show. It is always great pleasure when you are prodded
to performance on cue to share the values you hold dear.

> is there air to breath

Watching you keep your head in such an odd position toward his backside
and I'd have to say yes, there is a bit of foul air there, but you are
willing to suffer it in defense of your preferred homosexual talk.

Wayne:

A base linear plugs into the house power line.

A mobile linear is wired to the cars 12V system...

Both types, in CB linears, are constructed to take a 5 watt drive, from your radio.

You can get linears at most radio shops on or near truck stops, off the internet, and at other shops/suppliers.

Russian linears are now available and built like battleships, they can be located on the web, 5KW and bigger are available, however, with these large linears--you first need a 50-100 linear in front of them to drive them, else, a 10 meter ham radio converted to 11 meters and with sufficient power output...

Ask a trucker where they got their linear, those boys usually know were to get 'em and where you can get the most bang for your buck...

John

Looks like I have to go back to school! --- Well, what the heck, why not?
Sounds like a challenging project to get my little emergency unit...
supposedly in the mail now... to work like a giant!

Thanks!

Wayne

Wayne:

There is a guy here selling palomar tx75 and tx100 linears, it is a thread right here in the newsgroup, I think the tx75 is around 100 watts and the tx100 a bit larger... you might contact him and inquire about them...

... ebay is another source, although they have to call them "amateur linears" or "ham linears" there, just get one capable of covering the 11 meter band...

John

That HR2510 and Expander 500 sounds sweet. Knew someone that had that
set-up. Mic was made for that radio.

First echo contraption I recall was someone called "Yankee Clipper" from Fords, NJ circa '74-'75 ... a true gentleman. He ran a stock D104 through a 60's vintage stereo tube amplifier that had a reverb delay. It sounded sweet, broadcast quality audio. Believe he operated on a Courier Centurion base. Boy you could hear him for twenty miles clear as day off a Radio Shack 5/8th vertical with stock power.

John Smith suggested your TX75 or TX100 would serve me well when I receive the Radio Shack Emergency Road radio with its 40 channels... I don't have a clue as to what they are except they are supposed to boost power and range?

Amplifiers for CB radio are illegal. It's not likely you will ever get
caught but if you do the fine is typically several -thousand- dollars.
If that doesn't bother you, fine. Also be aware that most CB amps
(including the Palomar amps listed above) usually cause interference
with nearby television receivers (your voice will be heard and the
picture will be screwed up). They also splatter onto other channels on
the Citizen's Band (if you listen to others on the CB for a few hours
you will hear what I mean). A device called a "low-pass filter" can
reduce the noise through the television but does nothing to prevent
splatter. Another thing to know is that an amp increases -only- your
transmit range, and not by much -- they don't improve your receive at
all. The only thing that will improve both transmit -and- receive is a
better antenna.

Get a real radio first if you're gonna start messing with amps. Run enough
power through that cheapy antenna and you'll change the color of your paint
underneath it. ;-)

2610. Three best Pre-40 Channel Radios

Newsgroup: rec.radio.cb
Date: 2005-08-06 22:04:06 UTC
From: Sir_Oblivion <sir@oblivion.org>
Message-ID: <afe0d$42f533dc$3f874bec$29694@NETROX.NET>
Source record: 203547

I have my three.

*Browning Mark III
*Tram D-201
*Hygain V

The Hygain was a interesting radio, used tubes for output and audio. Never owned one but I wish I did.

The next would be the Sonar 23, dynamite radio. Was a pleasure to work.

I used to verify the tuning of our TBL on the USS Collete with a simple neon tube plus all the 'official' stuff. So I know something about emissions; which were never powerful enough to hurt a human being or even a mouse at close range. So... your suggestion of paint removal is... how should I say it? A bit far fetched? My signal from that TBL would reach Washington while I was in the sea of Japan.

But I must confess total ignorance when it comes to CB.

Wayne:

When you are out and about, and happen to run into a trucker, start a bit of chat about linears and such... most all of the truckers run linears... they can give ya the skivvy on it all...

There was a time back during the 70's and into the 80's when cb antennas were quite common on autos about, the fad faded, most of they ended up running linears...

When you find you need a bit more range, remember the linear is your best friend, but a good antenna is paramount to increased range also!

John

I agree. ;-)

With my attempt at levity aside, I was trying to tell you that if all you want to do is communicate with local, and I do mean local, truckers for local road info, then your little RS will do the job.

If you are actually going to get into CB further and end up purchasing a real radio, antenna, and perhaps an amp down the road, then you are better off buying a decent radio/antenna combo now, and maybe an amp later, and canceling the RS radio, or sending it back.

If you want to throw money away, well, I guess that's your look-out. I was just trying to save you some greenbacks. ;-)

Thanks Jeff!

I'll probably end up keeping the emergency CB for the car, and if I get back into the mood, get a decent station CB with the right equipment, antenna and mike. After chatting with some truckers and paying more attention to this newsgroup.

2617. Trade 10 meter for 11 meter (ssb)

Newsgroup: rec.radio.cb
Date: 2005-08-08 00:31:53 UTC
From: IR <non@sequiteur.org>
Message-ID: <95vJe.7092$_41.6896@fe02.lga>
Source record: 203554

I've got the RS HTX-10 unmodifiable 10 meter am/fm/ssb mobile, 25 watts out on sideband. 28.000 - 29.700 MHz. Hardly used, with manual. The threads on the mike plug retaining ring are a little funked, the radio came that way, I just leave the mike plugged in. I have talked cross-country on it using a dipole antenna. Still have the antenna for that matter. These don't get a lot of money, as you can see if you check Ebay. So I'd (as the prejudiced owner) say it's worth 70 bucks.

I'd like to trade for a regular CB with sideband and 40 channels, nothing special. Unmodified/Unmodifiable Ok. Well used ok.

I'm in Connecticut, USA.

Contact me here or (860)738-2975

2621. "Do Tubes Go Flat If not Used"

Newsgroup: rec.radio.cb
Date: 2005-08-09 05:03:51 UTC
From: Para9mm@webtv.net
Message-ID: <21690-42F83937-315@storefull-3113.bay.webtv.net>
Source record: 203558

Years back in the Tampa Fl. CB renegade days I ran a tweaked out Eagle 500 amp for a "little" extra power.It was pushed by a 75watt modulator and in front of that was my tricked President Washington dial-a-watt down to 2 watts.All ran up an Antron 99 w/ a ground plane kit attached and spoke from a D104 The entire rig (much more than I mentioned above) has been shelfed for at least 10 years.The glass in the Eagle were hot upon storage.

My question is do tubes go flat over time when not in use.If so and if I ever decide to pull it out for my dad who's house bound what would be a good contact for those 20LF6 tubes.I haven't seen much on the internet for that particular series of tube.

Ray,

CW will be dropped soon, then you take Element 2 and 3 and you will
be able to use your HTX-10. If I didn't have a 2950, I'd trade you
a PC-122 for it.

He said it was an HTX-10, not an HTX-100.
The 10 is a 485 type small unit, the 100 is a 2510-like unit.

Hi Guys,

I've got my General (NL7MO) since '88, about a month after I got
my Novice. Also, I had a PC-122 back then. My only gripe about
the PC-122 was that the slide switch for am/ssb wasn't too good.

I operated on HF and UHF but, I've kind of lost interest in it,
I'm more interested in CB again, although I know I won't be too
active in that either...

So if you want to part with your PC-122, please let me know how
much.

Thanks,
Les

They don't go bad with age if not used. However if there was a
manufacturing defect, i.e. not completely sealed, they do become "gassy" and
lose efficiency. They tend to leak around the pins. Look at the getter
(silver area on the inside of the glass.) Is it a nice shiny silver or does
it have some gray/white deposits on it. If it has the deposits then the
tube has a leak.

Please Read my Story. This is not a scam. This a true story, I live in Oklahoma USA.

I know most people get hard luck stories, and do not take many requests asking for donations very seriously. I get offers too, asking me to act as next of kin in return for millions and request for thousands in advance. This is not one of those requests.

I am not offering anything in return, just asking for your kind generosity to help a family in need. Not asking for large sums of money. Any amount you feel you can offer to help me and my family. 50 cents, one dollar, 5 dollars, You decide if you want to donate, and if so how much, if my story is worth any small donation or any donation at all. If you want more information you can e-mail me. Donations can be taken direct through my web-page, or you can use pay-pal and this e-mail address.

I get 100% of the donation as it is a paid site. If you are in question if it is legitimate, just ask me. I can give you information you can do your own verifications. Do nnot expect me to send you false documents to prove my story is real. I can give you ligimate businesses such as the funeral home. You can call the business from information listing and inquire of the death and funeral. I can give you date of listing in local News papers obituaries. If you are really interested in donating to a good cause. I am sincere about the needs of my family and be glad to answer your questions or inquiries.

I am a real person and my situation is real. Please consider my needs with your small donations. Thanks in advance to all who truely believe in my cause , have sympathy for my family , for your prayers and offerings. So bless you for your time to at least read my story.

If you want to read my story on my web-page, please e-mail me and I will send you the link.

_____
God Blesses them who give to those less fortunate.

2640. Another CB idiot destroys a nice amplifier....

Newsgroup: rec.radio.cb
Date: 2005-08-10 14:49:14 UTC
From: Same Old Same Old <Crystal.Gaze.4444@aol.com>
Message-ID: <dj3kf11hp2ib8oo503hnn57c8fe3fj9h9m@4ax.com>
Source record: 203577

Well....A few months ago I reported the sad demise of a Henry 2K console amp when a CB idiot thought he could "put out 5000 watts" by driving two 3-500z tubes with one 3-500z tube. It was a nice amp. May it rest in peace.
Yesterday I heard another CB idiot with a recently purchased Kenwood 922L amp also which also uses two 3-500z tubes. What does he do? He decides to drive the two 3-500z tubes with a Palomar 300a. The Palomar 300a uses 2 6kd6 tubes driving 4 6kd6 tubes. I use to own a Palomar 300a back in the 1980s. They will dead key about 125 watts on low and 275 watts on high.
The recomended driving power per the manufacturer datasheets for a single 3-500z tube is about 35 watts depending on the plate voltage. I think the Kenwood 922L uses about 2500 plate volts, class B, and is cathode driven.

See..

http://169.237.38.248/sonic/3-500z.pdf

The idiot was wondering asking his buddy if his audio was distorted with both amps turned on. It was. He also claimed that the 3-500z tubes in his newly acquired Kenwood 922L amp must be getting weak, and need to be replaced. I wonder why? I give the Kenwood 922L amp about a month left to live.

sigh

May it rest in peace.

2642. Grant LT Meter Lamp burned out

Newsgroup: rec.radio.cb
Date: 2005-08-10 18:55:57 UTC
From: jerryjmcconnell@gmail.com
Message-ID: <1123700157.633352.181560@z14g2000cwz.googlegroups.com>
Source record: 203579

Can anyone please tell me what kind of replacement bulb I should use. I called Uniden Parts department and they said they would have to e-mail a tech and they would get back to me in 48 hours, although she didn't seem confident they would have them. I figured it might be cheaper/easier to replace the meter itself but they said the replacemnet meter did not come with the bulb!

The schematics (found at www.cbtricks.com) lists it as "PL501 Meter Lamp", but unfortunately that doesn't mean anything to me.

I guess if all else fails I could put a multi-meter on the two leads and take a guess at the proper bulb? My local Radio Shack had an assortment of 12v, 6v and 1.5v mini lamps, not sure if any of those would be appropriate.

Thanks for any help.

2643. FS: 3 radio's!! MUST GO!! 2 mobiles and one portable,(like new) with photo's!!!

Thanks...I opened up the radio cut off the bulb and measured 13v off the leads (I had the radio plugged into an AC-> DC converter). So I went to radio shack and got a 12v 25mA mini lamp (part 272-1141) and it worked.

However, it doesn't sit too nicely into the space that the original bulb did (I still haven't heard back from Uniden) and I'm afraid it might eventually burn/discolor the back of the meter.

The LED idea sounds perfect, but as you can see I'm no Tech, so I assume that the drop resistor would drop the voltage down to what the LED would expect?

Correct. Most LED handle a few volts. The resistor drops the excess voltage.

Here is a formula where you inpu the LED specs, and it tells you the resistor
value needed. Just fill in the blanks:

http://www.superbrightleds.com/led_info.htm

You are starting to see many of these Super Bright LEDs in flashlights. White is
the color you want.

Also, the intensity in measured in MCD. The higher the number, the brighter (and
more expensive). For example:

http://www.radioshack.com/category.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F011%5F006%5F002%5F000&Page=1

Glad you like it Enzo, I paint damn near everything some shade of green. My friends give me some shit about it too, but what the hey, a man needs a color to latch onto. The car is on a big steel plate..it looks like it's peeling out in the dirt, until you see how much smoke/steam is in the air.

We water the tires down first, but it still shred's them.

Green means go, right?

Source record: 203513
Cross-posted to: rec.radio.cb,rec.radio.amateur.policy

I just got back from the Pomeroy area helping a friend evacuate from
the path of the School Fire. While there I made a few observations:

- CB radio is being used -extensively- for emergency communications,
mostly by civilians but to some extent by firefighters and support
organizations.

- CB radio traffic is NOT chaotic -- operators are well behaved, there
is very little channel bleedover, and no idiots jamming the channels
or yelling "A-U-D-I-O";

- CB radios are just about everywhere while hams are nowhere to be
found (and yes, I looked. There was only a rumor that a ham had set up
shop in Tent City (where the firefighters are camped) but was still
trying to get his equipment working!).

Now all you CB-hating hams who -still- can't swallow this bitter pill
have the opportunity to go there and listen for yourselves. Even
better, you can go there and lend your communication 'expertise' to
the effort (which is the very activity you claim makes ham radio so
important -- so what are you waiting for?). Or you can sit on your fat
asses, stuff your face your nachos, and continue to fabricate reasons
why it's impossible for CB radio to be a practical mode of emergency
communication when, in fact, the impossible is occuring despite your
best efforts to deny it.

As an intercom in a very short range area. Nothing more. It
never was.

> > - CB radio traffic is NOT chaotic -- operators are well behaved, there

That one on it's own merits is false, proven by switching on even
the simplist CB and listening for 10 seconds.

The ONE rule you'd think that everyone would adhere to is "Channel
9 is for EMERGENCIES only...It's as bad as the rest of them.

He's not talking to anyone with an IQ over 46...Because even THEY
know what a troll that was, Mike!

> Dear friend, I *have* 2 Citizen Band Rigs. And I use them extensively

KEQ1570 and KBIW1619. CB radio was how I got introduced to
Amateur Radio via the station of WA8FMT (SK) in Streetsboro, Ohio. I
use it occassionally for road trips too...Or to just stay awake!

Dad had one of the "19Q" calls, I believe, and that was changed to
KHG8459. He and a friend co-owned the "Sunoco" station at the
intersection of 82 (Aurora Road) and Som Center Road in Solon, OH. (I
ahven't been tehre in a while, but I believe there's a modern Sunoco
there now...) He had one of the Lafayette HE15's, and I remember the
mic was bitter than my hand by almost twice!

Memories, huh...?!?!

73

you know it is truely amazing the lies you tell Stevie

I have never heard anyone yelling audio, never experence jamming of any
sort, and only rarely seen bleed over into other channels,(although
when it is there it is REALLY there)

only experenced any real porblem in/near some of the large cities where
due to the silliness of allocating that small amount of specturm to so
many people problem are bound to occour

>
> The ONE rule you'd think that everyone would adhere to is "Channel

just FYI: I am not a CB Hater, I just don't think the "service" has a professional backing required to be of use with the major national emergency services. I base this on personal and direct experience with said radio service and most of the ilk that congregate there...

then you didn't look hard enough. btw, the quantity of radio sets still has no bearing on the argument over what (or who) can provide better service.

I can think of many who have ideas on this, but only a few here could pass the security clearance and have the ("desired" even if the ad doesn't say it) military background and extensive expertise in a related field. How about it, Frank? JimH? Feds need folks who are in touch with reality when it comes to anything to do with spectum and frequency management. Perhaps that would disqualify you both.

N7ZZT, holding his hands over his keyboard, recited the mystical chant, causing this text to appear, "... I just don't think the "service" has a professional backing required to be of use with the major national emergency services."

His text was correct--and noted a failing which should be corrected!

Someone in gov't needs to wake up and setup a system to use CB in a natural disaster, emergency, nuclear suitcase device(s) detonated on american soil, or other terrorist activity.

The homeland security money is just being PI$$ED away on pork-barrel, might as well be put to real use...

I can and do travel over most of what happend to be region 5 of Federal
resvrese system (and therefore of many other federal systems) and have
never heard the sort of condictions described) there are some crowding
issues in Chicago, but nothing I'd call chaos

It certainly does have a bearing, it is not the sole factor of course.
but if there 10 times as many radio it takes a smaller precentage to to
porvide vide as good a service

I can and do travel over most of what happend to be region 5 of Federal
resvrese system (and therefore of many other federal systems) and have
never heard the sort of condictions described) there are some crowding
issues in Chicago, but nothing I'd call chaos

>

It certainly does have a bearing, it is not the sole factor of course.
but if there 10 times as many radio it takes a smaller precentage to to
porvide vide as good a service

I recall working on one Siltronix amp many years ago. Not sure if it was even a legitimate Siltronx or some manufacturer simply affixed the Siltronix name. Cosmetically it look similar to the Siltronix 1011 but used 6LQ6/6JE6C tubes which were pretty inexpensive back then. I used to be able to buy those tubes at $6.00 each from virtually any TV repair store.

And ham radio is an intergel part of official emergency plans on both
the local and federal levels as well as NORAD and homeland defense. CB
isn't. Swallow that pill.

nope I am just better infromed Cmdr Sir maybe you should read your
reports more throughly Cmdr Sir

but in some areas CB is used in inter agency matters

We have been promised that evryone will soon be using the 800Mhz system
of the Michigan Sate police and that the system will be upgraded to
coover the entire area (arther than just along the state and federal
highways) but somehow when it has come down to PAYING for all this what
you see is a lot of finger pointing, and wring of hands

Maybe in few year we will have in place the pormised system the system
promised to these people here back in 1998 (they swore it would be rady
in case of Y2K) I showed some years after that and still much arguing
over costs and who was going to pay, Homeland Defense does seem to have
played a role in building some of the Twoer needed for the system but
still a whole of NIMBY on the permits

not at all

you simply never hear anything like that here int eh UP or in Central
Illinois where I used to live

You may hear some of it round major cities, but I don't hear in in
Milwalkee or Indy or St louis where I travel regularly

I hear some clear problem around Chicago when I am there, sound like
too many radios users not enough spectrum

But you claim that turning on the simplest CB will prove what you
calim is simply a LIE

The condiction vary from place to place

>
> > I have never heard anyone yelling audio, never experence jamming of any

right and of course

still never heard anyone say audio on CB, why would somebody say that?

>

>
>well then, yours is a rare exception

Well gee, Eric, considering your decades of experience of trotting
around the US and monitoring CB comm during disasters and emergency
situations, you are most certainly qualified to make such a judgement,
so I suppose your opinion -must- be the truth, huh?

>> - CB radio traffic is NOT chaotic -- operators are well behaved, there
>> is very little channel bleedover, and no idiots jamming the channels
>> or yelling "A-U-D-I-O";
>
>where was this?

Don't know how to google "School Fire" and "Pomeroy"? Oh, that's right
you're blind or deaf or something else that you use as an excuse not
to use your brain.....

> I can assure you that such wouldn't be the case here in
>Phoenix or any of the other major urban areas.

You have previously noted your "experiences" in Phoenix. Yet you now
refer to the past as a theoretical possibility. You aren't very
consistent with your lies, Eric.

>> - CB radios are just about everywhere while hams are nowhere to be
>> found (and yes, I looked. There was only a rumor that a ham had set up
>> shop in Tent City (where the firefighters are camped) but was still

>> trying to get his equipment working!).
>
>then you didn't look hard enough.

If ham radio was as prevalent in emergency communications as you and
some other ham claim then I shouldn't have had to look -at all-, let
alone "hard enough". But I most certainly did look, because I wanted
to find out whether these hams were working emergency comm, pushing
papers, washing dishes, or just getting in the way of people actually
doing things. So you may not understand this, Eric, but I was actually
disappointed when I couldn't find any hams. Consider it a compliment.

> btw, the quantity of radio sets still has
>no bearing on the argument over what (or who) can provide better service.

I'm sure that's true under your own biased and narrowly restricted
definition of "better". The fact is that reality is proving you wrong
even as you sit there and try to convince me otherwise.

>> Now all you CB-hating hams who -still- can't swallow this bitter pill
>> have the opportunity to go there and listen for yourselves. Even

>materials if you please?

The facts are available right now -- you just have to observe them
firsthand like I did. But it's clear that no facts are going to stand
in the way of your holy-ham opinions.

Hmmm..... why would a spectrum allocation advisor need a security
clearance?

the intent is of course to disqualify anyone that hasn't spend year
climbing the ladder

in the case of a clearance they would justify it by claiming it was
needed in order that someone could be told enough about our current
milcoms to advise on it

So why don't you contact Federal agencies and local agencies around the
country and report just how many intergrate cb radio in their emergency
plans? Also contact NORAD and Homeland Defense. Then tell us who will
count on cb and who will call on ham radio if needed. You, the toad and
wogie somehow related?

Already have twit, with a Naval Rear Admiral from the North American Defense Command and a Homeland Defense official. Both confirm that ham radio is in their emergency plans, cb is not.

>
> you point was that it is does not happen

My point is, amateur radio is in emergency planning, cb isn't.

>
> you are simply fact chalanged

You are simply intellegence 'chalanged'.

not at all

certainly not by you

Fortunately the rest of the military brass aren't in your family. You cbers just can't handle the fact that amateur radio is considered by emergency officials to be far and above cb radio when it comes to providing additional emergency comms.

commander:

Makes me think you aren't such a bad guy after all, excellent post, one of
your best, and one we can agree on!

I heard because it can burn your whole house down in a matter of
minuets. No - Just kidding...
I have a feeling if there was a recall its maybe the power supply in the
unit that uses AC Current was not made right or is up to specs and
probably could cause a fire. They dont recall cb radios for anything
else but for AC power only.
